PEDAGOGY OF HISTORY - I

University Syllabus 2021-2022 onwards

UNIT - I : Aims and Objectives of Teaching History

Meaning, Nature, Scope, Need and Significance, Values, Aims and Objectives - Instructional Objectives and Behavioural Objectives – Need and Importance of Instructional Objectives. Bloom's Taxonomy of Instructional Objectives: Cognitive, Affective and Psychomotor Domains, Revised Bloom's Taxonomy 2001 (Anderson & Krathwohl) Interrelation among the domains – Correlation between subjects.

UNIT-II: Teaching Skills

Micro-Teaching: Concept, Definition, Steps and Cycle - Micro-teaching Vs Macro-Teaching - Skill of Set Induction - Skill of Explaining, Skill of Questioning, Probing skills, Skill of Stimulus Variation, Skill of Reinforcement, Skill of non-verbal clues, Skill of Closure, Mapreading Skill, Skill of Black Board Usage - Link lesson – Model episode.

UNIT - III: Approaches of Teaching

Approaches of Teaching History: The Concentric Approach, Topical Approach, Chronological Approach, Unit Approach, Correlated Approach and Integrated Approach - Lesson Planning: Need for Lesson Planning, Steps in Lesson Planning, - Organizing Teaching: Memory Level (Herbartian Model), Understanding Level (Morrison teaching Model), Reflective Level (Bigge and Hunt Teaching Model)– Unit Plan – Lesson Plan Writing.

UNIT-IV : Methods of Teaching

Lecture Method, Problem Solving Method, Biographical Method, Story-telling Method, Discussion Method, Socialised Recitation Method, Source Method, Unit Method, Team Teaching, Supervised Study, Programmed Instruction, Computer Assisted Instruction, Keller Plan, Project Method, Activity Based Learning (ABL), Active Learning Method (ALM)- Mind Map, Advanced Active Learning Method (AALM).

UNIT - V : Instructional Media

Meaning- Need and Importance of Instructional Aids – Psychological Bases of Hardware and Software Technologies: Edgar Dale's Cone of Experiences, Multi-sensory Instruction – Hardware Instructional Aids: Motion Pictures, Computers, Projectors and Tab – Software Instructional Aids: Geotag, Charts, Maps, Globes, Cartoons, Posters, Newspapers - Use of Mass Media in classroom Instruction - New Emerging Media: Tele-Conferencing, Communication Satellites, Computer Networking, Word Processors, Blended Learning, Flipped Classroom, Artificial Intelligence and Augmented Reality.

UNIT - 1

AIMS AND OBJECTIVES OF TEACHING HISTORY

History

It can be boldly said that history has appeared since the day man appeared. Everything we see in the world definitely has a history. But generally speaking, history refers to the history of mankind. It is worth noting that the historian Herodotus has said that the history written about angels, devils and gods in the past has been written about human-centered history and that history is only human history. He is known as the father of historians. History has gained importance as one of the subjects to be taught in schools.

The English word history is derived from Greek. In Greek, the word, called Historia, means "knowledge gained by study". The term was coined by the Greek historian Homer. In English, "an inquiry designed to elicit truly. History is known as the book that explains the events of the past.

From the beginning of the 19th century, the history lesson in schools was given importance to develop thinking about one's country. Students get to know historians and their methods of researching facts. In many countries, history books have become tools for developing nationalism and patriotism. History educators have fought against the politicization of

books, with some success. Indian history books are generally used to inculcate the country's pride and ambition, to develop a sense of democracy, national progress, human rights, tolerance, peace and the ideals of one nation, one people.

Historians collect and research findings, news, and past events that contribute to current events. They collect information through inscriptions, excavations, oral messages and other archival materials and examine its veracity. History is the study of past ways of life in all its forms, how they contribute to present development and how they can be used to hope for the future.

1.1. History – Meaning

It was the Greeks who made it clear to us how history should be written. The word History is derived from the Greek word Historia. It can be said that history is the knowledge gained through research and history is the investigation that uncovers the truth. History is the study of past events and summarizing and explaining the truth of those events. Various scholars have interpreted history in various ways. If you know this, you can better understand the meaning of history.

Definition of History

Historians have given various interpretations of the definition of history. Definition helps to know a subject thoroughly, easily and concisely. Through this we can know the nature of history subject and its boundaries.

- History refers to the knowledge of the past.
- History is the continuous chronological presentation of a particular country and a particular people.
- The collection of past events is called history.

Aristotle

History is a compilation of the past that even God cannot change.

E.H. Carr

A never-ending dialogue between the dead and the present.

Togndee

History is the knowledge about the development of human civilization.

Thomas Carlyle

History is the life history of the people of Sri Lanka.

Sir Francis Bacon

History is a field of knowledge that makes people scholars.

John R. Seelay

History is the politics of the past and the politics of the present and the history of the future.

Lord Acton

History is the manifestation of human freedom.

G. J. Rainier

History is the story of human experiences living in civilized societies.

Henry Johnson

Everything that has happened so far is history.

Bacon

History is a discipline which makes one wise.

Acton

History is the story of human progress towards a perfection.

G.I. Renier

History is the story of human experiences living in society.

Tagore

There is only one History - The History of Man.

There is no universally accepted definition of history.

Negative definitions of history

Voltaire

History is nothing more than accepted imagination and it is nothing more than a collection of tricks we play on the dead.

Gibbon

History is nothing but a catalog of the crimes, mistakes and tragedies of mankind.

Napoleon I

History is an admitted myth.

Henry Ford

History is rubbish.

Morley

History is a sad comedy.

Voltair

History is just portrayal of Crimes and Misfortunes.

From the above definitions, it is assumed that history depends on the minds and mindsets of historians. Some of them are remarkably located. Some are instructive. Some are pure distortions. Nothing is definite, precise and final. Let us consider the subject of history only for the betterment and development of mankind.

1.2. Nature of history

The nature of history is to describe the origin of man, the development of man, the accomplishments of man. These have changed over time and according to the respective times. However, we can see from them that the term history has some general characteristics. They are,

- History is a collection of details about man and his experiences, growth and success.
- History is subject to specific time limits and chronological order. Time and space are regarded as the two eyes of history.
- Just as time is important to history, so is place. Events without time and place cannot be accepted as history. (Example First Battle of Panipat was fought between Babur and Ibrahim Lodi at Panipat in India in 1526 (Place. Period).
- History is a collection of human endeavors, successes, failures and lessons learned.
- History is not a single event or fragment. Rather history involves continuity and development. (For example the historical event of Indian freedom struggle, did not happen in one day. It continued for many years and finally won.
- History is an interpretation of what may happen in the future based on past events.

- History includes place, time, continuity, development to ensure that it is a real event.

When we analyze the statement of the above historical scholars, we can conclude that history is related to man and that history is the book and the field of study that explains what has happened since the day man appeared, the progress he has made, the growth he has achieved, and the knowledge he has acquired. Finally, it must be realized that history cannot be defined within a definition and that it is a treasure trove of time.

History is scientific in nature. It has the nature of accepting and analyzing historical news scientifically.

1.3. Scope of history

The scope of history is considered to be more extensive than that of other subjects. Once upon a time the boundaries of history were narrowed. History describes only one part of the country. But today, if we study the history of a country, we can read the broad history of the country's politics, geographical area, mentality of the people, economy of the country, environment of the country, mineral wealth, literature, scientific development, culture, technology, religion, fine arts etc.

History explains everything from what caused an event to happen, who initiated the event, the course of the event, the development of its consequences, the relationship between events, and how foreign historical

events match or contrast with our own. According to the historian Finlay, history tells how one event causes another event to appear.

Every phenomenon that appears in the world is based on the thoughts and ideologies that arise in someone's mind. It is history that links these with human development and points to the seeds of human extinction.

History, which only predicted and compiled the past, now extends its scope with a vision of the future.

Once upon a time history was narrow in scope with the traditions, stories and folk songs that were passed down. This situation changed. Currently, the world has become smaller due to the development of various scientific and technological developments, so that not only the events happening somewhere in the world can be seen soon, but also they have tried to enjoy its benefits. Therefore, the scope of history has expanded to explain the achievements of the people of the world in various fields such as politics, economy, technology and fine arts.

Von Ranke, who contributed greatly to the history of modern science, said "History is the true science of world society". The scope of history expands as the science ends up gathering data, analyzing it and attempting to write history.

It is no wonder that the horizons of history are expanding as the feeling of world brotherhood has

blossomed that all the people of the world are brothers. It is no exaggeration to say that history has reached the world as its limit because of the need for history to develop an international spirit.

Until the 19th century, the scope of history was limited to the political events of the country and details about the country. History is not just about telling the past. But today the social, economic, moral and literary life of the people, culture, religion and fine arts of the country have all been brought into the sphere and expanded. Every effort is being made to make history a more desirable subject. History today covers local, regional, national and international views and news. It starts from the past and tells the present and makes the necessary comments for the future. A history course consists of lessons about wars, revolutions, the rise and fall of rulers, the fortunes and misfortunes of great empires and people in general.

History is a comprehensive subject. It has before it the history of History, the history of art, the history of culture, the history of literature, the history of civilizations, the history of religions, the history of mathematics, the history of physics, the history of chemistry, the history of education, the history of philosophy. History today is a broad and encompassing subject with almost unlimited scope.

Telling the news like it is is a history lesson. Below are the major branches of history course today.

1. **Political History** : History of political system
2. **Social History** : Of People and Society History
3. **Economic History** : Economic and of economic processes History
4. **History of Diplomacy** : International Relations History
5. **History of Art** : Variety of Art History of Forms
6. **History of Food** : History of food
7. **Science and History of Medicine**: History of Medical Science
8. **Cultural History** : History of world cultures
9. **History of Women** : History of feminism
10. **Intellectual History** : Famous thinker- Evolution of concepts of
11. **Environmental History** : History of our natural environment and its diversity components

History can be studied at higher secondary, undergraduate and postgraduate levels. Those who have studied history can work in the following fields

- Historian
- Researcher
- Lecturer

- Professor
- Excavator
- Museum Curator
- Museum superintendent
- Archivist
- Public servant
- Records Manager

1.4 Need and significance of Teaching History

Introduction:

It is considered rare to get employment, wages, knowledge, technical skills, status etc. that are available to those who have studied other subjects such as mathematics and science because of studying history. We practically see people studying history who do not have opportunities in other subjects. But we see that many of those who pass civil works like IAS, IPS, IFS, UPSC have studied history. It is important that we know the reasons why history should be taught.

The need and importance of history teaching

1. Understanding Civilization Development :

Humans who lived in caves, trees, forests without clothes and covered their bodies with leaves and foliage, people who lived on green meat by hunting

green fruits and blackbirds, now according to the climate of their habitat, they have achieved civilization in many fields such as their dwellings, clothes, food types, means of transportation, and marketing. History is taught to know the development and to know the development of the human race and to gain historical knowledge.

2. Interpret their ideas according to contemporary events

The wars that took place in the reign of ancient kings and their consequences were given importance in the reign of the kings. The teaching of history helps us to acquire the power of reason to know the arts, pastimes, and ways of life of the people, to observe what is acceptable in those opinions, and to avoid what is to be avoided.

3. Helping to develop thinking power:

Learning history increases students' thinking power. In a world without wars, progress is felt. When did economic changes occur; Who is the cause of these problems? Rulers are empowered to reflect on how they have helped, the advantages of co-operatives and the disadvantages of going it alone. Why did the United Nations and the World Council say? Students gain knowledge and ability to think about the benefits that have resulted from their occurrence.

4. Teaching history helps to develop knowledge as a repository

Although knowledge is developed through learning science, mathematics and astronomy etc., historical knowledge also influences others. If electricity is invented, airplane is invented, shipping, steam engine etc. is invented, where is it obtained by invention, how is it obtained, what is the country of the inventor and who helped in his invention? Teaching history is necessary to learn what types of aids were available, how climates helped, and how new countries were discovered.

5. History is used for a peaceful lifestyle

By learning history, students learn about the present, analyze it and find its course. Past and present are vividly aware of the cause and effect relationship. History helps to understand the current problems at national and international level accurately and objectively. Through this understanding, history helps in shaping a useful and efficient way of life. We learn that studying history is interesting and has a real impact on our daily lives. For example, when the price of petrol is increasing day by day due to the increase in the price of crude oil internationally and the tax burden of the state and union governments, the middle class wants to buy electric vehicles as a solution and live comfortably.

1.5. Values in Teaching History

Whatever subject is being taught, it is a primary task for both teachers and students to know the purpose of teaching and its values. Values give meaning and strength to a man's morality. Values dictate how life should be lived. Values are useful for the complete development of a human being. So values reflect one's personal attitudes decisions, preferences, behavior, relationships etc. Different values emerge during the teaching of history. These are facts based on what happened at different times. Learning history inculcates values such as culture, respect for rules, restraint, humanity, national unity and patience to endure anything. History plays an important role in the development of society. Below are some of the values that come from learning history.

1. Knowledge Values
2. Information Values
3. Moral Values
4. Cultural Values
5. Citizenship Values
6. Ethical Values
7. Vocational Values
8. Social Values
9. Nationalistic Values
10. International Values

1. Knowledge values

History teaching is very important for cognitive development. History explains human progress and development. The totality of knowledge is called history. All subjects like science, art, language, literature, mathematics and History can be related to the historical background with the progress made in the past to reach the present state. Through historical concepts and approaches, students develop the ability to distinguish between fact and fiction. Knowledge of history is essential to keep one's life in the right direction while realizing the changes that have occurred in the world. Studying history improves students' imagination, memory, reasoning and decision-making skills. A student's intelligence increases as he gathers, analyzes and draws conclusions. All these help the cognitive development of the student.

2. Information Values

The real mine of experience is history. It describes the origin of various civilizations and cultures. These impart knowledge about arts, science, education, architecture, industry, etc. Records of the struggles and invasions of various times are available here. Such information is used to resolve individual issues. Bacon aptly said "History makes man wise".

3. Moral values

The moral training value is to explain how history helps one to perform any action confidently and

morally. Learning history creates morals. Students who study the biographies of leaders in history develop self-confidence and acquire moral qualities such as truthfulness, non-violence, sacrifice, courage and kindness to all.

4. Cultural values

History gives us the cultural development that took place in different periods. We learn how culture is transmitted from one generation to the next with some modifications. Through this, studying history develops in the students the characteristics of exchanging ideas among themselves and approaching liberal problems in the society without getting nervous. Students acquire the knowledge to realize the fundamental unity and find unity in diversity, even though there are many differences among the people of the world.

5. Citizenship Values

History is the best subject to teach citizenship. Knowledge of history is needed to make better and enlightened citizens of the country. The quality of living as a good citizen comes from learning history. History teaches political science better than any other subject. History is also said to be the root of the subject of Political Science. Students learn about their duties and rights here. These concepts are explained in citizenship training at school. Concepts of political development, constitutional evaluation and democratic development are covered in citizenship training.

6. Ethical Values

History is a lesson with living examples. History is a subject that teaches philosophy with examples. These examples show how the standard of living of the human beings was sacrificed for the sake of truth, justice and goodness. History has recorded the deeds and achievements of sages who met Sollavanna Duyam for high ideals and great moral values. The values of truth, honesty, justice and sacrifice are taught to the students of history through good examples which inculcates the students to live truthfully and honestly in their lives.

7. Vocational Values

By studying history, students learn Encourages participation in competitive exams like IAS, IPS. IFS and Civil Services. The course also prepares students to work in various fields such as political leaders, curators, tour guides, journalists, teachers and staff of government archives.

8. Social values

History course has a high social value. By studying history the student evaluates the knowledge of various social life. History lesson implicitly tells us how we should live in society by learning about the complex social events that happened in history. Students clearly understand how the problems in the society were solved. History helps us to plan how people were affected by certain circumstances in the past and how they can recover from such damage in the present.

9. Nationalistic Values

History of a country is about the development of that country. By studying history we learn to love our country. The history course tells about the leaders and martyrs who sacrificed their lives for the motherland. By studying about the acts of sacrifice, the idea that we too should make sacrifices for our motherland prevails in the students.

10. International Values

Modern history tells about freedom struggles, revolutions, great leaders of various countries. It is history to develop the character of a global citizen such as understanding the countries of the world and being in close contact with them and helping them in times of emergency. Through these events, international understanding is created and the feeling of "one world" is created among the students. Students of history should be made to believe that a country cannot progress alone. Hence the students realize the universal attitude that all countries should cooperate and progress with each other to live in peace and happiness.

1.6. Aims and objectives of Teaching History in School

Aims

It is a primary task for teachers and students to know the purpose of teaching and its needs and

benefits in any subject they are trying to teach. The term objectives refers to the attainment of broad goals in our educational system. The goal of education is to understand society and culture based on philosophy and social psychology. Some of the objectives are given below.

- Education should create patriotism and better citizens.
- Education should impart justice, ethics and moral values.
- Education should cater to the vocational needs of the individual and society.
- Education should provide leisure activities like music, dancing, gardening, reading etc.
- Education should be both physical and mental.
- Education should provide special education for the differently abled.

Objectives

Goals help us achieve our goals. That means objectives help us achieve our goals or objectives. Objectives are significant, direct and utilitarian in nature. Objectives relate to instructional strategies or student behavior change. Objectives refer to both teachers and students. The teacher should ask himself this question while preparing the lesson plan and going into the classroom. "What kind of change will I bring to

the students through this lesson?" These kinds of changes are the teacher's educational objectives.

Objectives are

- Marking the final state of an idea or action
- Bringing about a planned change of action
- Determining what we should do

So educational objectives are to make changes in a student. Bringing about changes through education can be expressed in the following way.

- Knowledge acquired by the student (Cognition)
- Skills and abilities (competencies) acquired by the student
- Interest (Curiosity) developed by the student and
- Attitudes (attitudes) that the student manifests

The student now understands what he did not already understand. He who could not solve problems before solves problems now. He changes his attitudes. So education brings about the following changes in the behavior of students.

- How much knowledge they have acquired
- How they think
- How they feel
- How they work

It is imperative that teachers understand the aims and objectives of teaching Abadam before conducting a lesson. Conducting a lesson without knowing the aims and objectives is to use it without knowing where to go. Once the aims and objectives are determined the teacher will decide on the method of teaching the lessons.

To determine the aims and objectives in a subject one must know the applicability and benefits of Abadam.

OBJECTIVES OF HISTORY TEACHING IN SCHOOLS

Various scholars have analyzed the objectives of history teaching from different angles and stated various objectives. Drummond Ammaiyar has outlined four types of objectives in teaching history.

They are

1. Perpetuation of the flavor mold in history studies.
2. Making scientific sense with historical attitudes
3. To see continuity in the development of civilization and progress in human life
4. Creating global health awareness and international focus

American Professor Lin Wood Charl divided the objectives of history teaching into two categories. They are

1. Purpose of attitude. Through this, developing material knowledge
2. Developing the skills of understanding and using history, understanding and appreciating the charity of the ancients, realizing the development of religious life, appreciating the art of drama, increasing the language and ethnicity, and developing the ability to feel that all the people of the world are brothers and sisters.

Through teaching history, the purpose of learning history is to explain the past to the students, clarify the present, develop the ability to create the future, and face events.

1. To understand oneself

History is taught to help the community understand who they are and what their duty is.

2. Understanding the environment

The most important thing is to understand the surroundings. History is taught to recognize the close connection between historical events and the environment.

3. Realizing the importance of moral life

Learning history is necessary to realize the virtues of moral life. Ashoka's legacy highlights the evils of war. The atomic bomb dropped on Japan during World War

It illustrates the evil of Anu. History is needed to explain what is right and wrong in life.

4. Development of historical thinking and historical knowledge

History is taught to develop historical thinking and historical knowledge, the ability to think to know historical facts, and to develop the ability to communicate.

5. Knowing about time, place and society

Students who study history develop knowledge of historical figures, events and facts. Through this, students are interested in gaining knowledge about its time, place and society and how to best apply that knowledge to contemporary issues. Also time and place cues improve memory skills in students. History lesson is used to analyze the present problems through the past events and make the right decision.

6. Develop better attitudes

By studying history, the teacher develops the following ideals in the students.

- Treat others with respect and explore their opinions and accept good ones
- Learning about other religions and beliefs
- Befriending others
- Working together on social and historical activities

- Appreciation of cultural differences
- There are no superiors and inferiors in mankind, regardless of religion, caste, color. Believing that everyone is a community member.

7. Measurement of contemporary achievement

Students who study history measure the values and achievements of the times in which they live. Through this they become aware of the political, social and economic thinking of modern societies.

8. Develop patience

History teaches the qualities of patience, tolerance and non-violence. The patience of the people during the struggle of the black people during the Indian freedom struggle and when many slave countries were freed is very admirable. Anna Gandhi, Abraham Lincoln, Nelson Mandela etc. are taught history to make them realize the path of non-violence.

9. Development of ethical qualities

The history teacher occupies a great place in inculcating good qualities in the student's mind. The teacher takes the biographies of great leaders and philosophers and their teachings to the students. Through the teachings of leaders like Buddha, Guru Nanak, Swami Vivekananda and Mahatma Gandhi, the teacher inculcates good qualities in the students like

selfless service, speaking the truth, following the path of non-violence and being kind to everyone.

10. Instilling a sense of nationalism

The main purpose of teaching history is to develop national unity and emotional integration in the students. Emotional integration is the process of bringing together people of different cultural, ethnic, religious and linguistic backgrounds with a sense of unity.

11. Fostering international understanding

Due to the rapid development of communication methods, the countries of the world are confiscating various messages within themselves. History is one of the subjects that can best impart international understanding to students. While studying the civilization, people's way of life, food and culture of many countries, we try to learn about those countries and follow their best events. It will destroy the discrimination between different countries. The dependence of one country on another country and the unity among countries is brought about by studying history.

12. To promote socialization among students

History is taught to students with the main objective of producing enlightened citizens who strive for the common good. Socialization inculcates in students social virtues such as developing self-confidence, living with courage and happiness, empathy, patience, unity,

sacrifice, critical thinking, creative thinking, honesty and thinking ability.

1.6.1 Levels of History Teaching in Schools

History is taught in schools at 3 levels.

They are

1. Teaching History at Primary School Levels
2. Teaching History at Middle School / High School Levels
3. Teaching of History in Secondary Schools

Objectives of teaching history at elementary school levels

In elementary classes (ages 5+ to 9+), the body and mind of the students are not sufficiently developed and matured. Therefore, it should be considered as a goal to teach such students simple ideas and ideas that can develop interest in history, rather than teaching such students ideas that can be thought about a lot or ideas that can be studied and learned.

- To know the history by taking the contemporary historical events and events and taking interest in the current development.
- To eventually learn the knowledge of the period and to know about the way of life, dress, food, entertainment, art, festivals etc. of the earlier people.

- To teach about family, neighborhood, city, state etc.
- Generally should be illustrated with stories about history.
- Teaching history with emphasis on local events should aim to teach history in such a way that students realize that history is a story and not an actual event and participate in learning with interest. The village administration, the district administration, the state administration, should be aroused to know how they function.

Objectives of History Teaching in Middle School / High Schools

- As the memory of students of this age is developing, history should be taught with sensory stimulation aids.
- History should be taught individually.
- Teaching should be geared towards recalling historical knowledge acquired in lower grades and making connections with previous learning.
- At this stage, the aim should be to design and teach programs to learn and teach history in chronological order.
- A continuum of ideas about village, district should stimulate curiosity about the administration of the state and the country.

- To develop curiosity about geographical places and the people who live there
- To know about the historical elders and their contribution not only to the country but also to the world
- To inculcate interest among students in reading historical news and historical books through self-study
- Identifying and exploiting the resource locations responsible for the country's economy
- To make the students of this level not only interested in learning history, but also inculcating the spirit of inquiry
- Aiming to realize the moral values and higher attitudes developed in response to historical events.

Objectives of History Teaching in Higher Secondary Education

- Pupils at higher secondary school education level are of pre-adolescent age. They have the ability to relate and read. Therefore, teaching history with the aim of teaching world history with national history should be regarded as a goal.
- Aim to teach patriotism, integrity, secularism and tolerance.

- To instill a sense of history through field trips, seminars, seminars, workshops etc. to develop the spirit of inquiry in the students.
- Providing practical training
- History should be taught with a scientific approach
- Expanding imagination by researching sources
- To learn about the history of historical leaders, their achievements and their contribution to the world, to evaluate them, to realize their values and to create a sense of protection.
- History should aim to increase knowledge and knowledge by combining events of the past with events of the present.
- Realizing what historian Bintley says that "History is to develop a historical attitude in the minds of learners", the main objective of history teaching is to motivate students to know the cause of all events and their benefits.

1.6.2. Difference between Aims and Objectives

S. No.	Aims	Objectives
1	Aims are long term goals	Objectives are short term goals
2	Aims are broad and common	Objectives are narrow and specific

S. No.	Aims	Objectives
3	Philosophy, Sociology is main source of aim	Psychology is the main source of objectives
4	They are difficult to achieve	they can be achieved conveniently
5	These can't be evaluated	They can be evaluated
6	School, Society and Nation is responsible to achieve them	Generally teacher is only responsible
7	Aims are non-observable	Objectives are observable behaviours
8	To achieve aims we have to go beyond curriculum	Objectives are achievable within the curriculum

1.7 Instructional Objectives and Behavioural Objectives

Instructional Objectives

Instructional objectives are basically statement which clearly describe an anticipated learning outcome.

Instructional objectives are helpful to the teacher as well as the learner throughout the learning process and are invaluable in the evaluation process. An instructional objective is the focal point of a lesson plan.

Before start teaching teacher must be guided by instructional objectives. Instructional objectives can be classified into three domains of learning i.e. cognitive, affective and psychomotor. Objectives should state what the learners should be able to do after the instruction is complete. The process of how the instruction happens is not considered as an objective.

Purpose of Writing Instructional Objectives

- Define the desired outcome of instruction in terms of tasks that student will be able to perform.
- Establish expectation for the student.
- Focus course development and teaching activities on relevant information and skills.
- Provide a clear reason for teaching
- Provide criteria for eliminating unnecessary information and activities
- Indicate how success can be measured

Characteristics of Instructional objectives

Instructional objectives are specific, measurable, short term, observable student behavior. They indicate the desirable knowledge, skills of attitudes to be gained at the end of teaching. It describe the performance of a learner should be able to demonstrate after instruction.

- A well-written objective should describe a learning outcome. It should not describe a learning activity
- An objective focuses on the learner, not on the teacher. It describes what the learner will be

expected to be able to do. It should not describe a teacher activity.

- If an instructional objective is not observable, it leads to unclear expectations and it will be difficult to determine. The key to writing observable objectives is to use verbs that are observable and lead to a well defined product. Verbs such as "to know" to understand, "to enjoy" to appreciate etc. are vague and not observable. Verbs such as "to identify", "to list", "to compute" are explicit and describe observable actions or actions that lead to observable products.
- There are many skills that cannot be directly observed. The thinking process of a student to solve a mathematics problem cannot be easily observed. However one can look at the answers or the steps to arrive at an answer.
- Objective to be sequentially appropriate
- Objective to be attainable within reasonable amount of time.
- Objective to be developmentally appropriate (within students level of intellectual)

Importance of Instructional Objectives

Instructional objectives are important to both learners and instructors. They help learners plan their study and prepare for examinations. They guide the instructors in planning instruction and devising tests. Instructional objectives play an important role in the

teaching and learning process. They are the heart of teaching. Its importance is given below:

1. To provide direction for the instructional process by clearly stating the intended learning outcomes.
2. To convey instructional intent to students, parents and educational authorities.
3. To provide a basis for evaluating student's learning by describing the performance to be measured.
4. They state in clear terms behavioural changes expected from a learner after with a learning activity.
5. Without instructional objectives, it will be very difficult for a teacher to access the behaviours of the students in the three domains of education. (Cognitive, affective and Psychomotor Domains)
6. Instructional objectives encourage reflection and good course design and development.
7. Instructional objectives help to define reinforcement situations of the learners.
8. They enable the teacher to modify methods to suit the process of eliciting those behaviours that the objectives specify.
9. They help the teacher to know how well the students have covered the content.
10. They give direction to both teacher and students in the selection and use of materials, methods and activities for learning.

Behavioral objectives

A behavioral objective is a learning outcome stated in measurable terms, which gives direction to the learner's experience and becomes the basis for student evaluation.

Points in writing behavioral objectives

1. Begin each behavioural objectives with a verb. The critical aspect of any behavior is the verb selected from learning activities.
2. State each objective in terms of learner performance. A behavioral objective is one that is considered to be observable and measurable. Behaviour is generally constructed to be an action of an individual that can be seen, felt or heard by another person.
3. State each objective so that it includes only one general learning outcome.

Examples of Behavioral Objectives

Knowledge : Remembering previously learned facts

Comprehension : Ability to understand or grasp the meaning of material.

Application : Ability to use previously learned material in new and concrete situations.

Motivation and Behavioural Learning

Motivation plays an important role in behavioural learning. Positive reinforcement can be motivators for students. For example, a student who receive praise

for a good test score is much more likely to learn the answers effectively than a student who receives no praise for a good test score. The student who receives no praise is experiencing negative reinforcement - their brains tell them that though they got a good grade, it did not really matter, so the material of the test becomes unimportant to them. Conversely students who receive positive reinforcement see a direct correlation based on that response to a positive stimulus.

Purpose of Behavioural objectives

- Guide for the teacher to design of instruction.
- Guide for the teacher for evaluation
- Guide for the learner relative to learning focus
- Guide for the learner relative to self assessment
- Makes teaching more directed and organized
- Forces teacher to think carefully about what is important.
- Helps teacher to avoid unnecessary repetitions in teaching.
- Provides visibility and accountability of decisions made by teachers and learners
- Helps students make decisions regarding prioritizing
- Helps relationship between teacher and learner.

Examples of Behavioural objectives

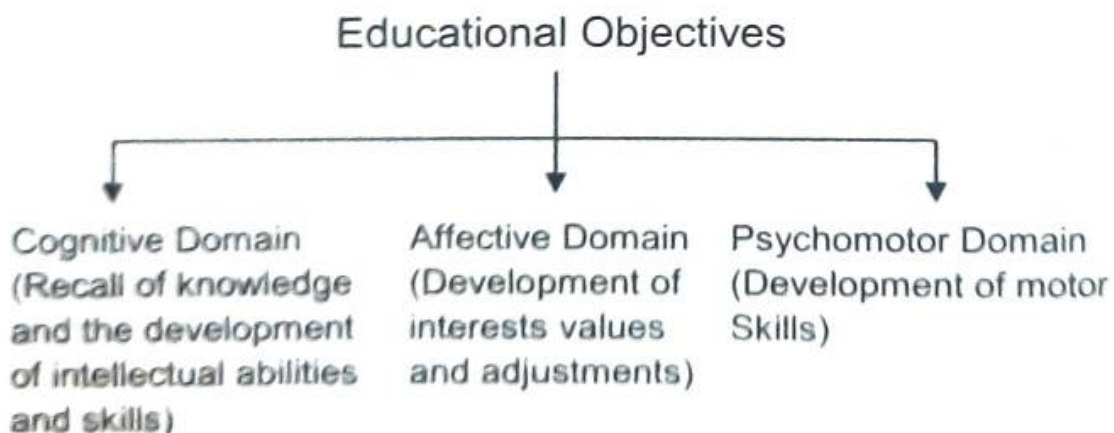

General Objectives : The student will know various aids to teach the subject.

Specific Objectives : Student must be able to analyse and interpret the results obtained.

1.8 Bloom's Taxonomy of educational objectives

To define understand and classify the educational objectives American educationalist Benjamin S. Bloom and his associates at the university of Chicago divide it into three domains i.e. cognitive, affective and psychomotor and explains clearly to the teachers.

A brief account about these is given below.

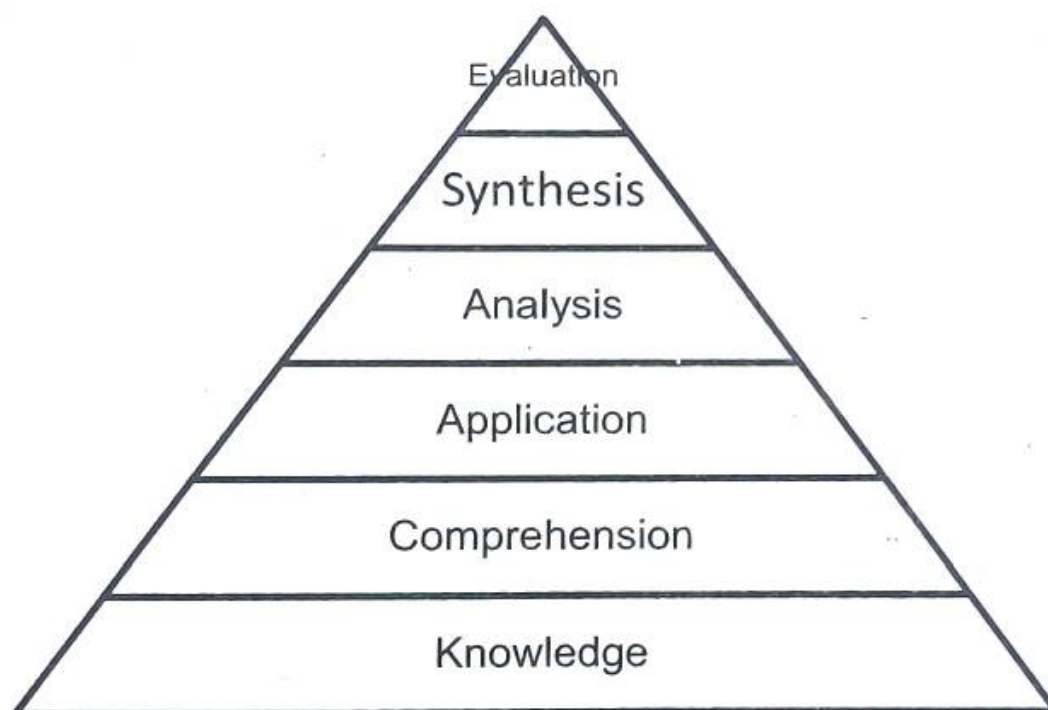

In each domain, objectives are hierarchical order starting from easy to difficult. Hence this arrangement is called "Taxonomy of Educational objectives.

1.8.1 Cognitive domain

Cognitive domain includes those objectives which deal the recall or recognition of knowledge and the

development of intellectual abilities and skills. This domain consists of six parts and arranged in a hierarchical order, in increasing levels of difficulty (from lower to upper)

Knowledge forms the basis for all cognitive objectives and all other objectives are not possible without knowledge. Similarly if one is able to apply knowledge in a new situations, it can be inferred that he has to achieve lower levels of objectives namely knowledge and comprehension clearly. Thus a higher level objective subsumes to lower ones.

While teaching History for Secondary and Higher Secondary students give priority to the first three objectives of cognitive domain namely knowledge, comprehension and application. The remaining three objectives Analysis, Synthesis and Evaluation may be trained to them according to their maturity of mind.

Knowledge

This objective is to remember and recall or recognize the already learnt information, acquire more and more knowledge.

Comprehension

Objective at this level requires understanding the knowledge without any doubt. He should have ability to arrange data in order.

Application

This objective requires students to apply already learnt knowledge learnt knowledge to new and unfamiliar situations. Think critically in depth.

Analysis

Objective at this level requires the learners, to attain the ability to break up a given communication into parts to understand it better.

Synthesis

Synthesis is just opposite to analysis. The ability of this level is to draw upon elements from various sources and put them together to produce a new structure. This objective gives divergent thinking and creativity.

Evaluation

This is a highest objective of cognitive domain. The ability of this level is to make judgements about something for given purpose. Judgment can be both quantitative and qualitative.

It helps teachers in the following ways:

- Helps to assess and judge the difficulty of assignments.
- It increase the accuracy of the lesson
- Simplifies action to ease personal learning
- Designed a combined assessment
- Helps for project based plans for learning
- Helps for group discussion

Instruction objects of Cognitive Domain

Parts of Cognitive Domain	Instructional Objectives
<u>Knowledge</u> Student knows the History symbols, concepts, definitions, formulas, statements etc.	<u>Student</u> 1. Recalls the History formulas, concepts and statements. 2. Recognises what he learned.
<u>Comprehension</u> Student understand the of History subject science symbols, concepts, definitions, formulas, statements	<u>Student</u> 1. Gives examples 2. Give reasons 3. Compares 4. Differentiates 5. classifies 6. relates 7. detect errors and rectify 8. using symbols 9. Explains 10. Evaluate the result

Parts of Cognitive Domain	Instructional Objectives
<u>Application</u> Using of History knowledge and comprehension to solve the problem in a new situation.	<u>Student</u> 1. Examine what is given in the problem? What is need? 2. Examine the sufficiency of the data. 3. Select appropriate formula 4. Solve the problem in an appropriate method 5. Applying alternate method 6. Verifying the result.
<u>Analysis</u> Break up a given of History statement into small meaningful parts	<u>Student</u> 1. Understand the meaning of the hypothesis 2. From the given data draw conclusion 3. Identify motives / causes for the History concepts. 4. Discriminates, selects, illustrate History concepts.
<u>Synthesis</u> Putting elements from various sources and put them together to produce a new structure	<u>Student</u> 1. Design a method to perform a new task. 2. Revises the process to improve the outcome. 3. Compile, generate, create historical concepts.

Parts of Cognitive Domain	Instructional Objectives
	4. Solves the problem 5. Develop the idea in advance.
<u>Evaluation</u> Evaluating Qualitative or quantitative judgement for History elements or methods.	<u>Student</u> 1. Evaluate the solution of a given problem 2. Select the most effective solution. 3. Explain and justify a new proposal 4. Assess / defend History concepts. 5. Review / Criticise History statements.

1.8.2. Affective Domain

The affective domain refers to emotional and attitudinal engagement with the subject matter while the cognitive domain refers to knowledge and intellectual skills related to the subject matter.

Affective domain includes the development of feelings of the educational and social attitudes and to increase the emotional objectives namely attitude, interest, values and appreciation. The different objectives under affective domain are Receiving, Responding, Valuing, organisation and characterisation.

1. Receiving:

This is the first step for the learner to learn what the teacher teaches. Listen attentively to a particular phenomena or stimuli.

2. Responding:

This is also called interest objective. Pupil is sufficiently motivated to attend actively. Interest in mathematics lends the student to select a particular vocation throughout his life. Interest can be developed in solving puzzles, reading mathematical books and journals etc.

3. Appreciation :

Student appreciates Mathematics for its use in daily life and how it helps to other subjects.

4. Organisation :

This objective brings together different values, resolving conflicts among them, starting to build an internally consistent value system.

5. Valuing:

It means individual's own valuing or assessment of thing, phenomena or behaviour. It is also called attitude. Development of proper attitude in mathematics is one of the major objectives of teaching mathematics.

Instructional Objectives of Affective Domain

Parts of Affective Domain	Instructional Objectives
<u>Receiving</u> Listen to others with respect. Listen for and remember the newly introduced content.	<u>Student</u> 1. Identifies 2. Asks 3. Understand 4. Points out errors boldly. 5. Listen to others attentively.
<u>Responding</u> Participate in class discussions. Gives a presentation, questions new ideas, concepts etc.	<u>Student</u> 1. Reads books of History 2. Solves History puzzles 3. Writes activities on History for school magazine. 4. Gives short cuts for solving problems. 5. Does problems apart from syllabus. 6. Gains science knowledge more than the syllabus. 7. Participates in History club activities. 8. Participate in class discussions.
<u>Appreciation</u> Valuing to a particular object, phenomenon or behavior ranges from simple acceptance to the more complex state of commitment.	<u>Student</u> 1. Solving the problems of other subjects using History. 2. Appreciates how History is useful in his daily life.

Parts of Affective Domain	Instructional Objectives
<u>Organisation</u> Recognise the need for balance between freedom and responsible behavior. Explains the role of systematic planning in solving problems.	<u>Student</u> 1. Recognize the need for balance between freedom and responsible behavior 2. Explain the role of systematic planning in solving the problems. 3. It becomes habit to think logically.
<u>Valuing</u> Has a value system that controls his behavior. Uses an objective approach in problem solving. Revises judgments and changes behavior in the light of new evidence.	<u>Student</u> 1. Shows self reliance when works independently 2. Co-operates in group activities. 3. Revises judgements and changes behavior in light of new evidence. 4. Values people for what they are not how they look. 5. Accepted statements when logically proved.

1.8.3 Psychomotor Domain

Elizebath Simpson built her taxonomy on the work of Bloom and others. Simpson's Psychomotor domain is comprised of utilizing motor skills and coordinating them. Simpson's taxonomy has a focus toward the progression of mastery of a skill from observation to invention.

The psychomotor domain includes Physical movement, coordination and use of the motor-skill areas. Development of these skills requires practice and is measured in terms of speed, precision, procedures or techniques in execution. The seven major categories are perception, set, Guided Responses mechanism, complex over to Response, Adaptation and Origination.

The behaviour and development of every child is depends on the above three domains. So while teaching, the teachers teach the subject matter on the basis of the above three domains.

1. Perception

It means observing the act of the teacher.

2. Set

Readiness to act. It includes mental, physical and emotional sets

3. Guided Response

Following directions of the teacher and differentiating among various movements. This is the early stage in learning complex skill.

4. Mechanism

This is the intermediate step in learning a complex skill. Learned responses have become habitual and the movements can be performed with some confidence and proficiency.

5. Complex Overt Response

This is the highest level of proficiency and it becomes natural and automatic. Proficiency is indicated

by a quick, accurate and highly coordinated performance, requiring a minimum energy.

6. Adaptation

Skills are well developed and the individual can modify movement patterns to fit special requirements

7. Origination

Creating new movement patterns to fit a particular situation or specific problem. Learning outcomes emphasize creativity based upon highly developed skills.

Instructional Objectives of Psychomotor Domain

Parts of Psychomotor Domain	Instructional Objectives
Perception Perception is the most basic level to process sensory information that guide motor activity	Student 1. Detects non verbal communication cues 2. Estimate where a ball will land after it is thrown and then moving to the correct location to catch the ball. 3. Observing the act of the teacher.
Set Mentally, emotionally and physically ready to act.	Student 1. Repeat the act of the teacher.

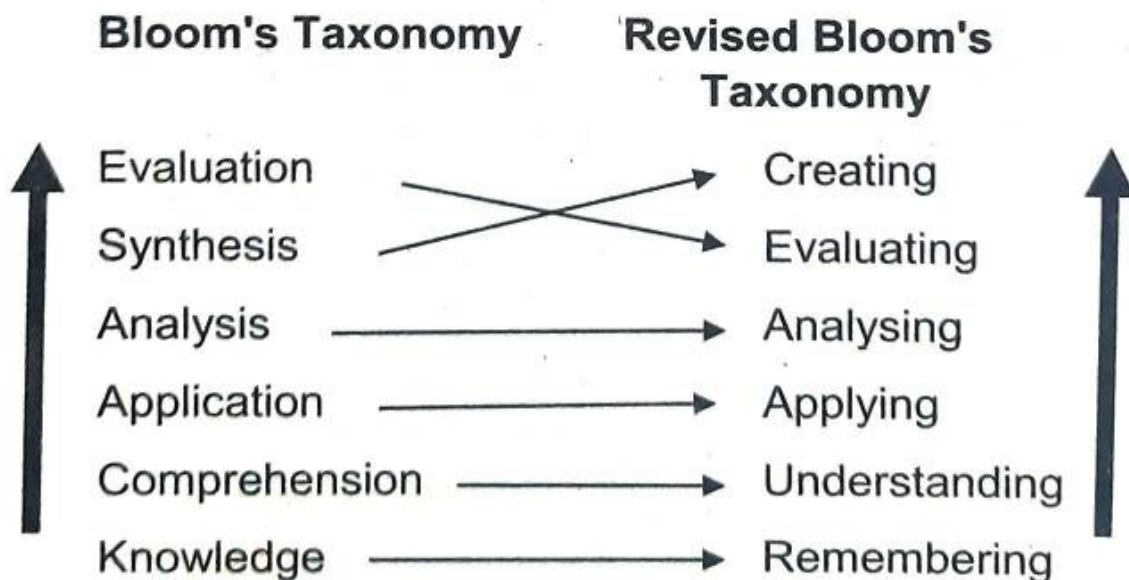

Parts of Psychomotor Domain	Instructional Objectives
	2. Acts upon a sequence of steps to solve a problem. 3. Shows desire to learn a new process.
Guided Response Imitates and practices skills often in discrete steps	Student 1. follows 2. react 3. response 4. copies 5. performs
Mechanism Performs acts with increasing efficiency, co-ordinate and proficiency.	Student 1. Drives a cycle 2. assembles 3. dismantles 4. measures 5. mixes
Complex Overt Response Motor activity performs automatically.	Student 1. Operates a Microscope quickly and accurately 2. assembles 3. builds 4. measures 5. organizes
Adaptation Adapts skill sets to meet a problem situation.	Student 1. Responds effectively to unexpected situations. 2. Modifies method to meet the needs.

Parts of Psychomotor Domain	Instructional Objectives
	3. Perform a task with a new method.
Origination Create new patterns for specific situations.	Student 1. Constructs a new theory. 2. designs 3. creates 4. builds 5. composes

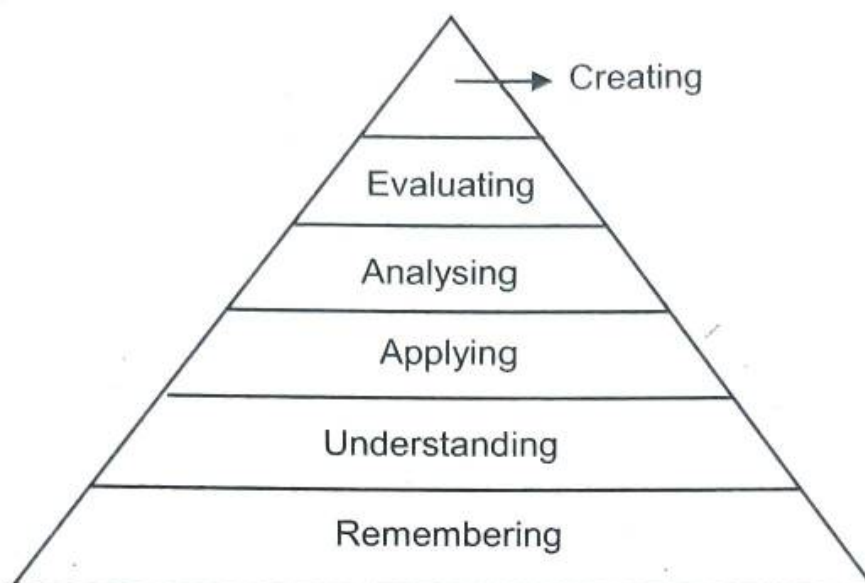

The behaviour and development of every child is depends on the above three domains. So while teaching, the teachers teach the subject matter on the basis of the above three domains.

1.9 Revised Bloom's Taxonomy

In 1990 Loris Anderson former student of Bloom revised the taxonomy and made a number of changes.

Revised Bloom's Taxonomy

Remembering:

The knowledge category was renamed as remembering. Knowledge is an outcome or product of thinking and not a form of thinking. Hence the word knowledge was inappropriate to describe a category of thinking and was replaced with the word remembering.

Remembering is recalling information. This objective is to recognizing, listing, describing, naming, finding already learnt information.

Understanding:

Objective at this level requires learners to understand the knowledge without any doubt. He should have knowledge to interpret, explain, classify and summarize.

Applying:

Objective at this level requires the learners to apply information in another familiar situation and executing in a best way.

Analysing:

Objective at this level requires the learners to attain the ability to break up a given information into parts to explore understanding and relationships between them.

Evaluating:

The ability to make judgements about a decision or course of action. Judgement can be both quantitative or qualitative.

Creating:

By putting elements together from various sources to form the ability to generate new ideas, products or ways of viewing thing in a different way. Designing, planning, producing, inventing new things and objects is the objective at this level.

Potential activities of cognitive domain**Remembering:**

1. Listing the important events of the day
2. Marking of Chennai on Indian map
3. Constructing a conceptual image of history
4. Setting a timeline for events

Understanding:

1. Retelling the story in your own style
2. Preparation of a moral diagram to represent the sequence of events
3. Writing and performing a play that fits the story
4. Writing a summary report of an event

Applying:

1. Setting up a model to describe the way things work.
2. Prepare a task related to a popular Linux distribution.
3. Set up a game or puzzle that fits the topic
4. Dressing a doll in national dress

Analyzing:

1. Preparation of a questionnaire to collect information.
2. Preparation of a diagram on the given messages.
3. Writing a biography based on what you have read about someone
4. Preparation of family tree to know the pattern of relationship

Evaluating:

1. Preparing a discussion platform for a problem.
2. Preparing notes that fit your vision for an action or event
3. Debating a topic of special interest
4. Setting up a group to discuss the views

Creating:

1. Designing a new machine to do a specific job.
2. Designing a magazine cover image.
3. Writing down your feelings about history.
4. Write an article on a new topic for your school annual magazine.

1.9 Inter-relation among the Domains

Learning helps develop an individual's attitude as well as encourage the acquisition of new knowledge and new skills.

Learning can generally be categorized into three domains: Cognitive, affective and psychomotor. Learning is not an event. It is a process. It is the continual growth and change in the brain's architecture that results from the many ways. We take in information, process it, connect it, catalogue it and use it.

Cognitive Development

Cognitive development refers to the way a child grows intellectually. Assessing for academic skills, reasoning, and critical thinking abilities, and the acquisition of knowledge or learning. Difficulties interacting with others as a result of problems and social or emotional development will impede a child's ability to focus. Problems or delays in physical development might impact a child cognitively.

Affective Domain

The affective domain includes the feelings, emotions and attitudes of the individuals. The categories of affective domain include receiving phenomena; responding to phenomena; valuing; organization and characterization. The sub domain of receiving phenomena creates the awareness of feelings and emotions as well as the ability to utilize selected

attention. This can include listening attentively to lessons in class. The next sub domain of responding to phenomena involves active participation of the learner in class or during group discussion. The ability of the student to prioritize a value over another and create a unique value system is known as organization. This can be assessed with the need to value one's academic work as against their social relationships. This helps to control the behavior of the individual.

Psychomotor domain

This includes utilizing motor skills and the ability to coordinate them. The sub domains are perception; set; guided response; mechanism; complex overt response; adaptation; and origination. Perception involves the ability to apply sensory information to motor activity. for eg. Practicing a series of exercises for scoring high marks. Set, involves the readiness to act upon a series of challenges to overcome them. It includes the ability to imitate a displayed behavior or utilize a trial and error method to resolve a situation. Mechanism involves the ability to convert learned responses into habitual actions with proficiency and confidence. A student having an increased typing speed when using a computer is an example for complex overt response. Adaptability is an integral part of the domain which exhibits the ability to modify learned skills to meet special events – making a working model. Origination also involves creating new movement patterns for a specific situation.

Cognitive is for mental skills, affective is for growth in feelings or emotional areas while psychomotor is manual or physical skills.

The learning domains can be incorporated, while designing the course outcomes of all the courses in a program. We can learn mental skills, develop our attitudes and acquire new physical skills as we perform the activities of our daily living.

Research in the field establishes the significant relation among three domain of learning.

A lesson developed by a teacher requires the inclusion of all three domains in constructing learning tasks for students. The diversity in such learning tasks helps creates a comparatively well-rounded learning experience that meets a number of learning styles and learning modalities. It is important for teachers to adopt a teaching strategy that combines three domains of learning to enable teaching and learning to be considered as effective. Apply the best and suitable delivery techniques that would impact positively on the Cognitive, Affective and Psychomotor domains of the students. The interaction of all three domains is needed for meaningful educational experiences.

For example while teaching Economics, New knowledge is obtained in Cognitive Domain. Using Psychomotor Domain motor skills, sensory organs (eye, ear) are used while operating a computer. With the Affective Domain components, we give motivation, Acts

upon a sequence of steps to go for a process, acts with efficiency and proficiency and creating new technique for specific situations. Teachers has to relate two or three domains and perform teaching learning activities and give meaningful learning experiences.

1.10. Correlation between subjects

History is very useful to study and understand and apply other subjects in all activities of daily life.

1. History and Geography

History is concerned with understanding the temporal dimension of human experience (time and chronology). Geography is concerned with understanding the spatial dimension of human experience. By teaching geography and history together we learn how geography has influenced societies and helped shape human choices. Students can take that example and apply it in their own lives. There is an inextricable link between history and geographical phenomena. The reason why geography and history are interrelated is that we as humans have been interested in learning about our past and our evolution since before humans came to earth. History tells us that the first vestiges of human civilization flourished around the geographic features necessary for survival. Many invasions and colonizations may have occurred for geographic organization. Battles were won because geographical features favored one side, or failed. So geography is always related to history.

2. History and Literature

A society, a whole nation or a whole world wants to record as accurately as possible the events of the people's lives. Literary writers also focus on conveying an intellectual and emotional interpretation to the readers when describing historical events. Sometimes historians change history by using their imagination and creativity while writing down the events to please some people.

3. History and Mathematics

Mathematics enables robust analysis by combining both approaches by mathematically analyzing historical data sets. Historical data is explored through image visualization and network parameterization. History is used to explain how ideas and knowledge have changed from a social and historical perspective. It is possible to know how science and especially mathematics have changed in different periods of history.

4. History and Economics

History is the study of events. It looks at each event sequentially. And while it acknowledges patterns or similarities (history repeats itself) the starting point is always case study analysis. Economics is the study of patterns. Economists look for similarities between different phenomena. You will realize that every piece of economic theory is ultimately a piece of crystallized history.

Economic history is the study of our past development, particularly in relation to economics, labor and commerce. For example, the economic development of nations, the development of business firms, and the organization of work. Economic history is the study of close relationships with the fields of economics and history.

5. History and Political Science

Political science is closely related to history. All political institutions – government, legislature, executive, judiciary and others – have a history of evolution behind them. Political science, without studying their history, needs the help of history to study their contemporary nature, status and inter-relationships. History is the telling of facts. Political science analyzes the relationships between various realities. Political science gives meaning to historical facts. Political science and history are therefore intimately and inextricably linked.

6. History and Sociology

History is the study of the various realities of human life and sociology which forms a specific study of the various realities of human life is closely linked. Both history and sociology are concerned with the study of man in society and differ in their approach. History helps to study sociology. It gives a new perspective to history due to social processes and social causes in continuous social change and development. Historians are now focusing more on social history.

7. History and Psychology

History and psychology are closely related. A historian must show some psychological insight when analyzing the motives and actions of men and societies. Unless the discoveries of modern psychology are applied, the work of the historian is mere fiction. In the past the historian inquired primarily into the origins of war and did not seek to examine its results. Historians have studied the results and implications of the war as a result of the influence of psychology. Understanding group psychology can help a historian to determine the role of masses in various revolutions like patriotism.

Uses of correlation

1. Mind perceives knowledge as a whole. All the subjects aim to develop the intellectual power of the students as a whole. Therefore, it becomes necessary to correlate one subject with another. No subject can be taught in isolation.
2. Correlation of a subject with daily life helps to make the knowledge broad-based and makes knowledge useful. The aim of education "to achieve the development of an all-round personality", cannot be done by teaching only a few subjects in isolation.
3. It strengthens skills that students encounter in one content area but also practice in another, leading to mastery of those skills.

4. It develops the mental abilities like imagination power, logical thinking and analytical power of students.
5. It makes the lesson easy and clear and develops various human and social qualities such as co-operation, citizenship etc.
6. Correlation of subject with daily life is of the utmost importance in order to create interest in the subject.
7. It makes learning concrete and permanent.
8. It helps to lighten the burden of curriculum.

REVIEW QUESTIONS

1. Explain the meaning, nature and scope of History.
2. What are the important Aims of teaching History. in Schools?
3. Write the different values of History.
4. Explain the Cognitive Domain and write its Instructional Objectives.
5. Explain the Affective Domain and write its Instructional Objectives.
6. Explain the Psychomotor Domain and write its Instructional Objectives.
7. Explain Revised Bloom's of Taxonomy.
8. How learning domains can be inter-related in teaching of History.
9. Explain how History is correlated with other subjects.
10. Write the need and significance of teaching History in Schools.
