

UNIT - III

PRACTICING THE TEACHING SKILLS IN HISTORY

3.1 Approaches of Teaching History

Science education programmes will be designed to enable the learner to acquire problem solving and decision making skills. Learning of science become unavoidable part of general education. In this chapter we shall discuss various approaches of teaching. Approach is the way in which teaching is approached.

3.1.1. The Concentric Approach

The Concentric approach, often called spiral, is a way of organizing a curriculum by laying out basic concepts, covering other related material, and then circling back around to the basic concept and filling in more complexity and depth.

It is believed that starting with fundamentals that are then regularly revisited, built on, deepened and broadened each time leads to a better understanding of a subject's inter connection and enter into long-term memory.

The concept of concentric design is based on the cognitive psychological theories of Jerome Brunner. Brunner believed that there are three distinct stages in the human Cognitive process; the enactive phase in which the learner interacts with and uses objects or processes; the iconic phase in which the learner

manipulates images of these objects or processes; and the symbolic phase, in which abstract representations of them can be utilized. Concentric curriculum design attempts to leverage this understanding of cognition into a deeper understanding of the subject at hand.

Design of Concentric Approach

'Learning spiral' template designed to help educators apply concentric theory to their curriculum design. The template suggests a five phase analysis - learning by getting ready, learning from sources, learning by doing, learning from feedback and learning by thinking ahead that helps generate thinking - centred lessons.

Concept of Concentric approach

- In concentric approach, knowledge is widened slowly and steadily.
- A subject matter is taken and spread over number of years.
- An introductory years, elementary knowledge is given.
- Then in next year little higher level knowledge is added and this is done in all subsequent years.
- Thus a study programme is maintained to impart knowledge to student.

Steps in Concentric Approach

- First a unit / Topic is taken.

- Then the topic is broken into number of sub topics / units.
- These sub topic / units are allotted in various classes according to difficulty level.
- Elementary knowledge is given in introductory years.
- Full-fledged knowledge is provided at higher levels.
- At every stage revision is done.
- Portion is neither too long nor too short.

Merits of Concentric Approach

1. It is a Psychological approach of teaching.
2. Teacher can get adequate time to cover the portion.
3. Topic is continued for number of years, impression lasts forever in minds of learners.
4. As revision is done every year, child retains the knowledge.
5. Since small portion of topic is taken, interest of students is maintained. Teaching does not become dull.
6. Teacher can make use of different techniques to introduce and deliver the content.
7. If same teacher takes topics continuously every year, he/ she knows weak points of students and he/she can bring necessary modifications in topics/teaching, to make content strong in students.

Demerits of Concentric Approach

1. If topic is too long, every year, studying the same topic and seeing same chapters in textbook make students loose their interest.
2. If topic is too small, it will not create any permanent impression on mind of learners.
3. If topic is not divided properly, into its sub units, it may prove harmful.
4. Does not work well for small topics.

3.1.2. The Topical Approach

In this approach, the Curriculum maker takes a particular topic as a central theme at various instructions and concepts. A specific topic is started in a particular class and finished in the same class. A topic is a comprehensive collection of materials of a specific topic of the particular subject.

In this method a particular topic is started in a particular standard and finished over there only. The same topic must not be touch in other grade. In topical approach a topic is taken as unbreakable unit.

Procedure

Topical method is more a system if arrangement of subject matter than a method of teaching. Its adoption depends on a suitable organization of the syllabus. The topic taught at as stretch, without a break or gap. This gives mastery over the topic. This approach is organized around themes, topics and units of the content.

At each stage the topics vary in accordance with the ability and interest of the students. For example in primary classes, the child may start the study of food, clothing, shelter and means of transportation. In the middle classes more important and more difficult topics are introduced. In the secondary classes, the student may be provided with more and more difficult topics.

In this approach, we can deal with all the aspects of a topic and give an overall view of that particular topic.

Examples of Topical Approach

In the topical approach, units focus on discrete events

- i. World War II
- ii. Indian freedom struggle
- iii. Water
- iv. Oxygen etc.

Advantages of Topical Approach

- It enables the teacher to conduct the content as they want and adapt it to the different needs of the children as per their needs.
- It provides a plan to deal with the material in a logical and rational way.
- It helps the student to understand the facts of their developmental setting.
- It gives a sense of purpose to the student.
- This approach can be adopted according to the age, ability and aptitude of the children.

Disadvantages of Topical Approach

- It is difficult to understand all the portions of the topic.
- It gives large amount of information which makes students confused.
- It is quite difficult to study a topic for a lengthy period of time.
- Students don't get a sound knowledge of the content as its conduct in a general way.

3.1.3. Chronological Approach

The study of History from one point in time to another point in time is called Chronological Approach. This means that one history class might cover 200 years of Indian history or World history, while another class might cover thousands of years from the Stone Age to the Medieval Period.

Chronology is the science of locating historical events in time.

Chronological Approach is arranged in the order it happened. This approach may be preferable to some history teachers simply because students expect the lesson plans to proceed in a predictable fashion. It also allows teachers to set a foundation in one unit that the following unit builds upon. For example students proceed from the civil war to reconstruction. The downsides of the chronological approach include the challenge of getting students engaged, getting them to draw connections and encouraging them to identify trends throughout history.

Chronological Knowledge

Sequencing, events, stories, pictures and periods overtime to show how different times relate to each other and contribute to a coherent understanding of the past. you don't have to teach topics in chronological order but need to relate the topics you teach to their chronological context.

For example a chronology of your day would start when you wake up and end when you go to bed.

7.00 AM Wake up

8.30 AM Showered, brushed teeth

9.00 AM Go to school

5.00 PM Returned to house

5.30 PM Go to playground

7.00 PM Study time

9.30 PM Go to bed

Chronological order

- Chronological order is a way of organizing ideas in the order of their occurrence in time.
- We use this pattern to tell stories, relate historical events and to write biographics.
- We also use it to explain processes and procedures.

Example

Put the following time periods into order from shortest to longest

Century, hour, second, year, week, month, decade, millennium, day, minute

Answer : Refer Page No.

Merits of Chorological Approach

1. It is easy to understand
2. It is a successful method in teaching chronology.
3. Successful in teaching cause - effect relationship
4. It is a familiar method

Demerits of Chorological Approach

1. Requires memorization
2. Teaches nothing while trying to teach everything
3. Does not provide meaningful learning
4. Fails in knowledge retention
5. Targets historical knowledge, not skills
6. Fails to make connections between past and present

3.1.4. Unit Approach

A unit approach plays an important role in learning in the early childhood because it has many meaningful activities related to each other. These learner understands the whole concept. So a unit is a body of information and experience which leads to significant outcomes in a learner. H.C. Horrison was the founder of unit approach.

Definition :

The combination of goals, concepts, generalizations, objectives, skills, attitudes, activities, teaching methods and evaluation procedures into a long-term plan for dealing with a specific topic has generally been called a unit approach in the early childhood classroom.

The unit approach contains four stages. They are

- i. determine the needs of individual children.
- ii. Construct broad objectives that would appear to meet the child's needs
- iii. decide upon a topic that would appropriately incorporate the objectives.
- iv. Plan activities to meet the objectives.

The child learns by actually experiencing or discovering through different methods and activities, rather than just reading a chapter from a text book. The unit approach refers to the idea of studying a topic as a whole instead of several subjects. For example : most people think of water as a science subject one way to look at water is H_2O - a chemistry subject. But it is also art (a beautiful water fall) history (the Red sea) History (the location of bodies of water) etc.

A unit study approach takes a topic and integrating with it science, social science, maths, language and fine arts etc. For example a unit study about animals would include

- Reading stories (Literature)
- Writing stories about animals (Creative writing)
- Classification of animals (Science)
- Learning new words such as vertebrate and invertebrate (Vocabulary)
- Finding out which animals live on which continents (History)

With Unit Approach, history, History, art, science, maths can be taught together to all ages.

Advantages of Unit Approach

1. The teacher decides the instructional programme according to needs of children.
2. Learning is more integrated.
3. A variety of activities take care of the individual differences among students.
4. It develops the qualities like self-confidence, persistence etc.
5. The teacher can present subject matter in a systematic, logical and effective manner.

Demerits of Unit approach

1. It is time-consuming method.
2. It is over burdening of teacher.
3. To prepare a unit approach and selecting a topic is not an easy task.

3.1.5. Correlated Approach

A mutual relationship or connection between two or more things is called correlation. Generally correlation design is found at the university level where students need expertise in specific subjects. Correlation simply defines how well two subjects go together.

Correlation design includes Bio - Chemistry which is combining of Biology and Chemistry. Other examples are social psychology, bio-statistics which is biology and statistics. Correlation in teaching indicates a technique which shows the reciprocal relationship between various subjects of the curriculum for making the knowledge concrete and permanent. Teachers show similarities or dependence of one subject on another.

Principles of Correlation

- It should be simple, natural, suited to the nature of the subject and the stage of the pupil's mental development.
- It should be adequate and judicious.
- Main topic or main subject should be the main focus. Other topics / subjects should be linked to it and then revert again to the main topic.
- When doing systematic correlation, teachers could sit together and discuss how to correlate.
- It should involve the previous knowledge of the students.

- It should be done only where it is possible, else it leads to superficial correlation.

Types of Correlation

1. Correlation with practical life : Correlation of the given subject with daily activities.
2. Vertical / Internal Correlation : Correlation between the different branches of a given subject.
3. Horizontal / External Correlation : Correlation between the given subject and other subjects.

1. Correlation with practical life

- According to Herbert spencer, the main aim of education is to prepare students for future life. This aim can be achieved only if education is correlated with life. Therefore teaching of various subjects should be correlated with various aspects of life.
- A subject is best understood when it is applicable to daily life.
- Correlation of a subject with daily life is of the utmost importance in order to create interest in the subject.
- Correctional with daily life makes the subject relevant instead of being only theory with no practical application.

For example

Maths : Apply the formulas to calculate areas of rectangle or square or calculate area of classroom or home.

2. Vertical / Internal Correlation

- This type of correlation indicates the relationship between different branches of a given subject.
- It also includes correlation of different topics in the same branch of a given subject.
- Branches of a subject are taught by different teachers, such that each branch is treated as a different entity.
- Internal correlation is necessary for continuity of knowledge and understanding of the subject.

For example

- A science teacher uses vertical correlation to correlate Physics and Chemistry or chemistry and biology and physics or biology and physics etc.
- An economic teacher uses vertical correlation to correlate production, consumption, distribution, exchange etc.
- A mathematics teacher would use vertical correlation to correlate Arithmetic and Algebra or Algebra and Geometry etc.
- A history teacher would use vertical correlation to correlate political history to economic history or social history etc.

3. Horizontal / External Correlation

- This type of correlation is between different school subjects and a given school subject.

- All subjects of the school curriculum contribute towards the realization of the aims of education.
- Since they have the same purpose, study of one subject helps in the study of other subjects.

Horizontal Correlation examples

- i. Mathematics with other subjects
- ii. Science with other subjects
- iii. History with other subjects etc.

Uses of Correlation

1. Mind perceives knowledge as a whole.
2. Retention of earlier knowledge. Always link old knowledge with new.
3. Correlation of a subject with daily helps to make the knowledge useful.
4. All round development
5. It develops the mental abilities like imagination power, logical thinking and analytic power of students.
6. It strengthens skills
7. It makes learning concrete and permanent.
8. It makes the lesson easy and clear
9. It helps to enable the students to acquire knowledge in a short period of time.
10. Develops various human and social qualities such as co-operation, citizenship etc.

11. It helps to lighten the burden of curriculum.
12. It helps the teacher to complete the curriculum in very short period of time.

3.1.6. Integrated Approach

An integrated approach is designed to focus on learning within the syllabus. It focuses on making connections among concepts and experiences so that information and skills can be applied to new and complex issues or challenges.

The concept behind integrated approach is to make meaningful connections between disciplines and utilize critical thinking to real-life problems.

Characteristics of Integrated Approach

- It primarily focuses on problem-solving
- It is a compilation of assessment, curriculum development and faculty development.
- Integrated teaching explores and uses information effectively.
- It enables children to integrate ideas and experiences and apply them to formulate new learning situations.
- Creativity, adaptability, critical reasoning and collaboration are the key feature.
- The method of teaching accommodates a variety of learning styles, theories and multiple intelligences.

Values of Integrated Approach

- It allows students to engage in purposeful relevant learning.
- It encourages students to see interconnectedness and interrelationships between the curriculum areas.
- Students are able to use their prior experiences to construct learning.
- Opportunities for students to display competence rather than relying a written or oral text.

Important points to use when implementing the Integrated approach

- Write the integrated curriculum in the daily schedule and daily or weekly lesson plan.
- Foster an atmosphere that welcomes and encourages creativity in the classroom.
- Use age-appropriate materials and techniques in teaching.

Merits of Integrated Approach

1. Integrated approach pays particular attention to an increase in understanding, retention and application of general concepts.
2. Focuses on basic skills and content
3. It provides a better understanding of the content.
4. Integrated approach encourages active participation in relevant real-life experiences.
5. It serves as a connection between various curricular disciplines.
6. It develops higher-level thinking skills.

7. Ensures active participation of students.
8. It create a positive and collaborative learning environment.
9. Teachers intrinsically motivate students to succeed is real life.
10. Provides deeper understanding to content.

Demerits of Integrated Approach

1. There is not enough time in the day to teach everything in isolation.
2. Lack of time to plan effective units.
3. Teachers are reluctant to put the time and effort to implement something that does not guarantee exceptional results.
4. A successful integrative approach involves input from teachers from all different disciplines which is often a difficult task.

3.2 Steps in planning a lesson

Education should be goal oriented and objective based, otherwise it is like navigating without a magnetic compass to show and guide the direction. A key aspect of effective teaching is having a plan for what you are going to teach in the classroom. Creating such a plan involves setting realistic goals deciding how to incorporate course, text books and resource materials and develop activities that will promote learning. The following points will help in planning a lesson.

Setting lesson goals

- Building up their personality and character so that they can take their rightful place in the mainstream of the nation.
- Assimilating vocationally and socially desirable knowledge and skills.
- Developing ability to think critically and creatively.
- Developing healthy scientific attitudes towards problems and people and
- Motivating them to act according to worthy ideals in the service of community and the nation.
- Goals are based on the following order
 - ✓ Country
 - ✓ Education System
 - ✓ Educational Institution
 - ✓ Class
 - ✓ Unit
 - ✓ Lesson

All goals must be SMART

S – Specific Can the goal precise and well defined?
Is it clear?
Can every one understand it?

M – Measurable What evidence is needed to confirm the completion?

How you will judge whether the goal have been attained or not?

A – Achievable Is it within your capacity to achieve?
Are there sufficient resources are available to achieve?

R – Realistic It is possible for you to perform the goal. How does it fit in to your work?

T – Timed Is there a deadline?

Is it feasible to attain in time?

Example

1. By the end of the lesson students will learn about the importance of coins.
2. At the end of the lesson he explains the reasons for the success of the English East India Company in India.
3. Knows the measures taken by the Government for the protection of children.
4. Knows the causes of road accidents.
5. Knows the jurisdiction of the Supreme Court.

3.3. Designing a Lesson Plan

Lesson Plan

“Classrooms determine the India's future”. Taking the importance of the above statement, lesson plan helps the teacher to plan and prepare classroom teaching. If a teacher goes to class without any preparation, he will not only waste the time but also face some problems. Hence to plan and prepare what to teach in each period, how to present it with systematic order and evaluation procedures to be done in that class room-all combining and presenting in short is called lesson plan.

Lesson Plan Meaning

In lesson plan teacher has to clearly indicate, what are the teaching objectives and how he is going to teach the content in a specific teaching period. What are the aids to be used, what are the steps to use formative evaluation and what are the assessment are to be given etc. should be planned and noted in lesson plan.

Definitions of lesson plan

Good defines a lesson plan as an “outline of the important points of a lesson arranged in order in which they are to be presented to students by teacher”.

Passing defines a lesson plan as an “organized statement of general and specific goals together with the specific means by which these goals are to be attained by the learner under the guidance of the teacher on the given day”.

Standards, Lester B defines "a lesson plan is actually a plan of action. It includes the working philosophy of the teacher, her knowledge of philosophy, her information about the understanding of their pupils, their comprehension of the objectives of education, their knowledge of the material to be taught and their ability to utilize effective methods".

Principles for preparing the lesson plan

While preparing a lesson plan, the following principles should be kept in mind.

1. Student's previous knowledge, their capabilities must be basic for a lesson plan.
2. Present the subject matter in an organized, systematic and effective manner.
3. All objectives of lesson both general and specific should know to the teacher.
4. Lesson plan should create interest in students.
5. Questions motivating self-thinking, thought-provoking etc. should find a place in lesson plan.

Need and Important features of a lesson plan

A good lesson have the following important characteristics.

1. All the objectives of the lesson both general and specific should be stated clearly in the lesson plan.

2. A good lesson plan should outline in detail the various steps that the teacher proposes to take in the class.
3. It prevents waste of time, as every step has been planned and written.
4. Lesson plan gives self confidence to the teacher.
5. A good lesson plan should indicate the list of AV aids to be used and should specify when and how to use them while teaching.
6. Sometimes we may give more time to unimportant subject matter. We can rectify this defect while preparing lesson plan.
7. A good lesson plan will integrate previous knowledge and experience to new knowledge.
8. A good lesson plan should stimulate independent thinking, interest, creative, imagination powers of the student.
9. A good lesson plan should be flexible and not rigid.
10. To complete the syllabus in time, lesson plan is needed.
11. It helps the teacher to ask proper and important questions to students.
12. It promotes a healthy learning environment.

Uses of Lesson Plan

1. Lesson plan helps the students to focus on the subject matter.
2. It helps to complete the lesson in time.

3. It prevents waste of time.
4. We can determine which Instructional Objectives have been fulfilled with the help of the lesson plan.
5. To become master in subject matter.
6. To get clarity in teaching activities.
7. To obtain teaching resources
8. While teaching it helps to avoid concept contradictions
9. It helps to prepare appropriate teaching aids
10. It brings self-confidence and self-power to teachers.

3.3.1 HERBARTIAN STEPS

German educator J.F. Herbart advocated five formal steps in teaching. They are

1. Preparation
2. Presentation
3. Association or Comparison
4. Generalisation
5. Application

1. Introduction / Preparation

The introductory phase is called the 'warm-up' phase. The purpose is to create interest in students in the topic. The teacher may relate the new information to the one already taught or to the previous knowledge possesses by them. The new information is anchored with the existing knowledge.

2. Presentation

The transaction idea is done step by step following psychological approach. Starting from known things, the teacher leads the students to the new information by using comparisons, analogies, illustrations, demonstrations and other audio-visual aids including the chalk board.

3. Association or Comparison

Through assimilation of the new idea through comparison with former ideas and consideration of their similarities and differences in order to in plant the idea in the mind.

4. Generalization

In science lessons generally the learning material leads to certain generalization leading to establishment of certain formulae, principles or laws. An effort should be made that the students draw the conclusions themselves. Teacher should guide the students only if their generalization is either incomplete or irrelevant.

5. Application

In this step the knowledge gained is applied to certain situations related to their everyday life. This step is in conformity with the general desire of the students to make use of generalization in order to see for them where the generalizations are valid in some other situations.

3.3.2 Preparation of lesson plan

While preparing a lesson plan generally the following steps are followed.

1. Motivation / Preparation
2. Presentation
3. Association / Comparison
4. Generalisation
5. Application
6. Recapitulation
7. Assignment

1. Motivation / Preparation

Students are encourage and motivate to learn new knowledge. The mind of the child should be prepared to receive new knowledge. Preparation may involve.

- Testing previous knowledge to learn new knowledge.
- Integrating the previous knowledge with the new knowledge.
- Arrest attention of the students using new techniques.
- Announcing the aim of the lesson.

2. Presentation:

Here teaching takes important place. Students learn new knowledge. For an effective learning outcome, teacher should ensure active student

participation with the use of audio-visual aids. Teacher should stimulate thinking by asking number of questions while teaching.

3. Association / Comparison

Here the student understand the nature of the problem and compare the given information and analyse for the solution of the problem. Here knowledge is correlated with existing knowledge.

4. Generalization

In Mathematics lessons generally the learning material leads to certain generalization leading to establishment of certain formulae, principles or laws. An effort should be made that the students draw the conclusions themselves. Teacher should guide the students only if their generalization is either incomplete or irrelevant.

5. Application:

Here students apply the rules, formulas that they have learnt to solve the problems. By application of knowledge, the validity of generalization is tested and verified. Thus the knowledge becomes more meaningful to the learner and becomes permanent in his mind.

6. Recapitulation

Recapitulation helps the students to review the subject matter and consolidate ideas. Here Teacher will ascertain how well the students understood the new knowledge by way of asking few questions. From the

answers we will also judge the effectiveness of the Teaching method.

7. Assignment / Home work

To learn mathematics effectively, class room activity alone is not enough. To know the mathematical concepts, laws, formulae and applications clearly we need home work along with class room activities. Home work revise the portions done in the classroom. Assignments, motivate and reinforce further learning.

3.4 Organising Teaching

Organising of teaching-learning is the framework on which effective teaching is based. Careful and thoughtful planning allows instructional time to be maximised, standard to be addressed, prior knowledge to be activated, misconceptions to be controlled and the diverse characteristics and learning needs to be considered. Effective teachers use different methods for teaching to teach knowledge. In this topic we are going to see three different methods for teaching.

3.4.1 Memory level of Teaching (Herbatian Model)

Teaching is a part of teaching-learning process. It is required to bring specific changes in a person according to the need of his society. It should improve the learning skills of students. Teaching has to bring changes in the behaviour of students.

Levels of Teaching

Memory Levels of Teaching

Objectives

1. The objective of the memory level teaching is just to impart information or knowledge to the learners.
2. Retention and reproduction through recall or recognition.

In this level of teaching content, presentation and its exercise is important for learning. Emphasis is given on the presentation of information and facts in a systematic manner with a view to develop memory of students. At this level recall and recognition has important place.

Professor Herbart described the following five steps for the memory level of teaching. They are

- i. Focus
- ii. Syntax
- iii. Social system
- iv. Support system

v. Evaluation system

We will discuss the above steps in detail.

i. Focus

Here importance is given on cramming of facts and development of following capacities.

- Training of mental aspects
- Providing knowledge of facts
- Retaining the learnt facts
- Recalling and Representing the learnt content

ii. Syntax

Herbert's five steps are

1. Preparation :

Important function of this step is to bring relevant ideas of the subject matter. The teacher plans about presentation of the contents.

2. Presentation :

The students are given new knowledge by testing their previous knowledge.

3. Comparison :

In this level teacher attempts to compare old facts and new facts, its similarities and dissimilarities, relationship between two subjects etc.

4. Generalization :

Pupils are given opportunities to think the content. Pupils formulate some principles and laws which can be used in the future life situations.

5. Application :

Teacher generate new situations to use learnt knowledge in new situation.

iii. Support System

Here supportive devise are used to make learning more effective. The Audio visual aids are used to present the content in an observable form.

iv. Social System

This system consist of authoritarian behaviour. The teacher is more active to construct and present the subject matter systematically and logically in the classroom. The learners are passive listeners and they have to memorize and reproduce the content and their activities are directed by the teacher. At this level teacher provides motivation through verbal praise or punishment. If the learner is motivated or reinforced continuously, then they learn better.

v. Evaluation system

Evaluation is the evidences about the realization of goals of teaching. Usually oral tests are given to measure the learnt material. The objective tests of recall and recognition types are given to evaluate the knowledge of the student.

Features of Memory Level

- Analysis of the subject matter is more important in this level of teaching. Much emphasis is given on the presentation of subject matter and not the experience of the students.

- Definite and systematic orders of subject matter is presented in this level of teaching.
- Teachers are not very flexible in the presentation of subject matter.
- The Mechanical handling of the various segments of content.
- Learning outcomes is of short duration.
- Interaction between teacher and students is at the lowest level.

Role of Teacher

- Dominating, active and authoritarian role
- He is the authority to instruct, deliver, direct, control and evaluate the performance.
- Takes initiatives, present the subject matter, directs the learner to do the activity in the desired manner.
- Right from the selection of the subject manner to its evaluation, the key process of teaching-learning remains with the teacher.

Suggestions for Memory Level Teaching

- Frequent recall or reproduction of content should be practised.
- Whole to part method should be used
- The content should have definite structure
- Teaching content should be integrated
- Contents should be presented systematically.

- Continuous reinforcement should be provided to the students.
- Students retention can be increased by practice.

Merits of Memory Level Teaching

1. Useful for children at lower classes.
2. The role of the teacher is important in this level of teaching and he is free to make choices of subject matter, plan it and can present it at will.
3. The knowledge acquired at memory level teaching forms a basis for the future.
4. Memory level teaching acts as the first step for understanding and reflective levels of teaching. It is pre-requisite for understanding level teaching.
5. It is useful for slow learners

Demerits of Memory Level Teaching

1. This does not contribute to the development of the students' capabilities.
2. At this level students learns by rote, so the knowledge gained does not prove helpful in real life situations as it does not develops the talents of students.
3. The pupils are kept in strict discipline.
4. Intelligence does not carry any importance in this type of teaching and it lacks motivation.
5. No interaction in the class

6. There is no guarantee of good retention and appropriate reproduction of the memorized material by the learner.

3.4.2 Understanding Level of Teaching (Morrison Model)

The teaching at the understanding level is of a higher quality than the one of the memory level. It is more useful and thoughtful from the point of view of mental capabilities. At this level of teaching, the teacher explains the student about the relationship between principles and facts and teach them how the principles can be applied. This method enables students to have complete command over subject material. No Cramming is encouraged here. The term understanding means to comprehend, to grasp, and to have knowledge of, to learn, to interpret and to infer etc.

Henry C Morrison clearly stated that understanding is not merely being able to recall something. It is not mere generalization deducted from specific facts; it is an insight into how it may be used in future situations. Morrison asserted that the outcome of all teaching is 'Mastery' and not memorization of facts. Morrison is the main promoter of understanding level promoter of understanding level of teaching.

Objectives :

1. Acquisition of required knowledge / facts
2. To see the relationship between acquired facts

Morrison has described five steps in his teaching model. They are

1. Exploration
2. Presentation
3. Assimilation
4. Organisation
5. Recitation

Let us discuss the above steps in detail

1. Exploration

In this step, the teacher tries to know the students 'entry- level behaviour' (Previous knowledge)

2. Presentation

The overview of the subject matter is given and the structure of the whole unit is discussed with the students.

3. Assimilation

In this step, the students study the subject matter deeply and try to related presented material to their internal self.

4. Organisation

The student present the acquired knowledge in a systematic manner without the help of teacher.

5. Recitation

This step is related to the students' verbal expression of the subject matter which is learned by them. They visit the whole content.

Morrison's Instructional Pattern

Morrison's teaching plan involves the following steps

1. Pretest
2. Teaching
3. Testing the result of instruction.
4. Changing the instruction procedures and
5. Teaching and testing again until the unit has been completely mastered by the student.

Subject matter and its presentation

The subject matter for the understanding level teaching is quite structured in terms of planning sequential and organised presentation and meaningful learning. It needs to be linked with the previous knowledge of the students and with its utilization for acquiring new facts and application to practical life.

Role of the teacher

Like memory level of teaching, the teacher plays a dominant and authoritarian role at the understanding level of teaching. This type of teaching is also subject centred and hence teacher has to pay his full attention in presenting the subject matter to his students to attain the desired understanding objectives besides the knowledge objective. He has to take care of the fact that the students gain complete mastery over the subject matter in term of its full understanding and generalized insight rather than its mere memorization. Lecture, Demonstration or explanation, question and

answer method, inductive followed by deductive approach and analytic method with synthetic approach are all carried out at the understanding level.

Evaluation

Well-planned oral written and practical examinations are conducted in and outside the classroom. However emphasis is given to test to know ability to analyse, synthesize and apply the generalised principles for deducing new facts and solving novel problems.

Merits of Understanding Level of Teaching

1. At this level of teaching students to make use of their thinking abilities.
2. Knowledge acquired at this level forms the basis of the reflective level of teaching
3. Here the teacher present subject matter before the students in an organized and sequential form. The new knowledge acquired is related to the previously acquired knowledge.
4. Here the students do not learn by rote. They learn by understanding the facts and information and their use and purpose.

Demerits of Understanding Level of Teaching

1. Teaching at this level is subject centred. There is no interaction between the teacher and students at this level.
2. In this type of teaching mastery is emphasized.
3. Ignore higher cognitive abilities.

3.4.3 Reflective Level of Teaching (Bigge and Hunt Model)

This level of teaching is the highest level of teaching - learning activity. Reflective level of teaching means, problem centred teaching. Hunt is the main promoter of reflective level of teaching. Reflective level teaching does not depend upon the memorization, understanding of concepts, and their application only; it demands the use of higher mental processes as

- Reasoning
- Thinking
- Analysing concepts
- Imagination
- ideas and thoughts

The learner will develop new insight to

- solve problems
- to discover
- to present generalization in the light of the new evidence
- to explore the field of knowledge
- to test and retest the achieved facts.
- This level basically involves the use of the scientific method.

Objectives

1. To develop insight into solve problems
2. To develop rational and critical thinking

3. To develop the ability of independent thinking and decision making.

Model of Reflective level of Teaching

Hunt developed the following steps for the Reflective level of Teaching. They are

a. Focus

To develop problem solving, critical and constructive, independent, original thinking

b. Syntax

Steps

- i. Creating a problematic situation
- ii. Formulation of Hypothesis
- iii. Verify hypothesis
- iv. Collection of data
- v. Testing of hypothesis

c. Social system

Student occupies the primary place and teacher secondary place.

d. Support system

Objective type test is not used but essay type test is used. Attitude, beliefs and involvement is evaluated.

Features of Reflective level of teaching

- It is the highest level of teaching.
- It is problem - centric approach of teaching.

- The students are assumed to adopt some sort of research approach to solve the problem
- Classroom environment is independent. The learners are self-motivated and active.
- It leads to the development of creative skills.
- The students can solve problems of their lives by reasoning logic and imagination and lead successful and happy lives.
- Essay type test is used for evaluation. Attitude, belief and involvement are also evaluated.
- clear goals for pupil learning

Methods used for Reflective level of teaching

- Problem-solving method
- Investigating projects
- Heuristic method
- Experimental method
- Inquiry oriented method
- Analytic method

Merits of reflective level teaching

1. The teaching at this level is not teacher - centred or subject-centred. It is learner-centred.
2. There is an interaction between the teacher and the student at the reflective level teaching.
3. At this level, teaching is appropriate for the higher class.

4. At this level, teaching is highly thoughtful and useful then the teaching at the memory or understanding level.
5. This method is very useful for gifted children.

Demerits of reflective level teaching

1. It is not suitable for small children. It is suitable only for mentally matured children.
2. At this level, the study material is neither organised nor pre-planned. Therefore students cannot acquire systemic and organised knowledge of their courses.
3. It is a time consuming process.
4. It is not suitable for Indian class room.
5. It is not applicable for dull students.

3.5. Designing a unit plan

The curriculum/Syllabus framers would organize the content matter for a specific subject/class into meaningful major divisions in terms of units. It may also be termed as chapters in book forms. It may have sub units or sub-divisions these sub units may have a number of lessons with specific topical coverage. Thus a unit is an aggregation of several lessons, with specific core or central concept/idea. In text books these may be indicated as units or chapters.

Definition:

Preston defines a unit as, "large block of related subject matter as can be over viewed by a learner."

Samford defines as, "A unit is an outline of carefully selected subject matter which has been isolated because of its relationship to pupil's need and interests."

Characteristics of a Good unit

- A unit should be meaningful segments of well-organized subject matter.
- General and specific instructional objectives should be clearly defined in the unit plan.
- A unit should consist of familiar and related subject.
- It should give new experience and knowledge to students.
- It should help the individual differences in learning.
- A unit should not be too lengthily or too short.
- The length of the unit should be such as to retain the interest of the students.
- It should give new experience to the students.

Method of performing with Plan

History syllabus for the class may be divided into many units. Each unit is to be divided into small parts / lessons and then decide the number of periods to be allotted for each lesson. Plan all the units of the syllabus has to be completed in time. According to content of the unit, divide into required number of small parts and allot number of periods.

Format to divide the syllabus into units

Class: 8

Subject : History

S.No	Chapter	Topic	No of Periods required	Note
1.	Advent of the Europeans	Historical sources - Portugueser's trade in India - Portuguese and Dutch dominance in India - Denmark's colony Immigration - Arrival of the English, French and East India Companies	10	Conducting Achievement Test
2.	From Trade to Territory	The raise and the political power of East India Company Plassey battle and battle of Buxar - Karnataka wars and Mysore wars - The growth of colonial army and civilian administration principles of subsidiary Alliance and Doctrine of Lapse	8	Conducting Achievement test

.....

Signature of the teacher

Unit planning

A unit plan involves planning of teaching a unit, teaching methods, evaluation of teaching activities, diagnosing and remedial steps all together is called unit planning.

Proforma of a unit plan

Name of the Teacher : xxx
 Subject : History
 Standard : VIII
 Unit : Advent of the Europeans
 Class and section : VIII C
 Total no. of periods : 10

Sl. No.	Sub Division of the content	No. of periods required	Teaching Method	Resource Materials	Field Trip / Evaluation
1.	Source of Modern India	2	Lecture Method, Field trips	Tamil Nadu Political Map	National Archieve of India (WAI) is location
2.	Advent of Europeans - Portuguese - Vascodagama - Alphones - Albuquerque - the Dutch	3	Lecture Method	1. Maps Sea route of Vaskodagama 2. Euro-pean Trade Centres	 laid the foundation of Portuguese powers in India
3.	The British, Danish	2	Lecture Method Explaining with the help of Maps	India in East India company - Map	How did the British establish their trading centres in India.
4.	The French	1	Lecture Method	World Map	
5.	Review and conduct of Achievement Test	2			Conduct of Achievement test.

Advantages of unit planning

1. Since we are dividing the unit into small parts and teach to the students, the students are able to understand the subject matter clearly.
2. Unit plan helps the teacher to teach the students in systematic manner.
3. Unit plan help the students to understand the relationship between the facts and principles that make up the unit.
4. Unit plan help us to study all information pertaining the unit.
5. Unit plan helps to teach according to individual difference of students.
6. It helps the teachers to prepare teaching aids.
7. It helps to develop self confidence in students.

Steps followed to perform unit plan

The following steps have to be followed for a unit teaching - learning and activities.

1. Analysis of content
2. General instructional objectives
3. Specific instructional objectives
4. Planning the learning activities
5. Evaluation procedure
6. Remedial measures

1. Analysis of content

After selecting a unit, teacher has to analyse the contents of the unit in-depth. This helps the teacher to break up the unit into meaningful sub-units and retain the continuity throughout the unit.

2. General instructional objectives

Knowledge of content skill learnt is analysed here.

3. Specific instructional objectives

Specific instruction objectives of the content namely differentiating, establishing relationships, giving examples comparing, interpreting etc. are analysed.

4. Planning the learning activities

This part deals with the statements activities in teaching learning process keeping in mind individual difference, the psychology of learning and objectives. The teacher also has to plan suitable teaching methods that are to be employed here.

5. Evaluation procedure

Teacher has to evaluate with reference with reference to aims at the end of the unit or sub unit. Achievement test may be done and students' progress and the effectiveness of teaching strategies may evaluate.

6. Remedial measures

After analyzing the achievement test of the students, take remedial measures if the performance is not satisfactory.

Method of Performing unit plan

History syllabus may be divided into small units. Each unit is to be divided into small parts/lessons and then decide the number of periods to be allotted for each lesson. Plan all the units of the syllabus have to be completed in time. According to content of the unit divide it into required number of small parts and allot periods.

3.5.1 Difference between lesson plan and unit plan

S. No.	Lesson plan	Unit plan
1	Planned for a small portion to give effective teaching in one period.	Planned to teach a large content continuously for 6 to 10 periods or more.
2	Lesson plan is partial.	Unit plan is complete.
3	Full concept in learning is not achieved.	Full concept in learning is achieved.
4	Teaching alone will take place.	Teaching, evaluation, remedial teaching will take place.
5	Questions will find a place in lesson plan to motivate self-thinking, language ability etc.	There are not questions in unit plan.

6	Assignments will find a place at the end.	There are no assignments.
7	Lesson plan is written for each period.	According to length of the unit, unit plan is written for 6 to 10 periods or more.
8	Method of teaching is not specified here.	Method of teaching is specified here.

3.6 Structure of a four-fold lesson plan

Introduction

We use the introduction to tell us a little about our lesson plan. Briefly describe the instructional techniques, what students to learn and any activities or assessments that you think are particularly noteworthy. The title of the lesson plan should be concise, clear and descriptive. It should invite teachers to take a closer look at the plan. Remember that teachers may see only the title and a short abstract of our plan in a page of search results.

Objectives

We should give some general and specific objectives of the teaching lesson. These objectives should be written clearly to achieve the learning outcomes. Learning outcomes are what students are expected to learn after completing the lesson plan.

Learning outcomes should be closely related to the curriculum alignment but should not simply repeat goals and objectives of the standard course of study. Learning outcomes may be broader, address particular

aspects of curriculum objectives or teach the curriculum in a special context. Each learning outcome should be clearly reflected in the activities and assessed at the conclusion of the lesson.

Session time

Session time is the amount of time a teacher will need to schedule for the lesson plan. We might specify minutes, hours, class periods.

Materials

Materials needed include resources used by both teacher and student, including books, handouts, teaching aids, paper and pencils, art supplies and so on.

Previous knowledge of Learners

Write the previous knowledge required to understand the lesson plan.

Procedures

We should follow the following procedures to take the lesson.

1. Motivation
2. Preparation
3. Presentation
4. Review/Recapitulation
5. Follow up/Assignments

1. Motivation

- It could be through interesting introduction.

- The essence of introduction consists of arousing the interest of the pupil by supplying a motive for the study of a new unit.
- It is therefore better to call motivation.
- The essence of motivation consists in making the pupil understand what they are about and feel the worth wellness of studying it.

The most desirable motivation is for the pupil to see purpose in what he is doing. He must

- Recognize their need and its significance
- Identify the cause of his difficulties
- Have confidence in his ability to correct the difficulties
- Be given the proper exercise materials, which provide self-evaluation, and
- Be provided with opportunities for application of skills they have learnt

2. Preparation

- This is for laying the basic foundation for construction of the new lesson.
- Test the previous knowledge of the students, so that they could understand the present topic based on those previous knowledge/concepts.
- If the pre requisite concepts are not clear, they may not understand the present concept.

3. Presentation

- The most important part of teaching all skills learnt through micro teaching must be applied here to make the teaching effective.

- Make thorough content analysis-concept by concepts and then present the concept from simple to complex, from easy to difficult etc.
- Provide various activities group work, demonstration, explanation, questioning and blackboard work.

4. Review

- Provide the summary of concepts taught in that period.
- It may be fast restating by teacher or by asking questions and eliciting answers from students.
- This also will help to identify which part not understood well by students and brief explanation could be given.

5. Follow up

- It could be or simple assignment of asking to solve problems in exercise or
- Project work.

Students may be asked to observe from society or computer centers. It could be referring to nets/webs books etc.

The structure of four-fold lesson plan is given below.

Name of the Student Teacher	:	xxx
Name of the Guide Teacher	:	xxx
Name of the School	:	xxx
Class / Section	:	xxx
Subject	:	xxx
Topic	:	xxx
Sub Topic	:	xxx

Period : xxx
 Duration : xxx
 No. of students in the class : xxx
 Date : xxx

Instructional objectives:

Write the list of objectives of the topic to be covered. i.e. Write what the student knows at lesson completion.

Instructional Resources Required:

Write the list of materials/aids required to explain the topic.

Previous Knowledge of learners:

Write the previous knowledge required to understand the new unit.

Content/ Concept	Specification of behavioural objectives	Learning Experience (Teacher/Learner activities)	Evaluation
Preparing and giving motivation to receive new knowledge / sequence of events that make up the lesson / independent practice - Recapitulation	Behavioural objectives are the smaller, observable, understandable and measurable. It must describe learning outcomes.	Learning experience refers to all interaction and practice in which learning takes place in classroom. In this column teacher / student activities will take place to attain the objectives.	On the basis of content / concept and learning experiences formative questions are framed here step by step.

Followup activities : Give homework and assignment in the topic covered.

3.7 Preparation of a model lesson plans

Model Lesson Plan - 1

Name of the Student Teacher: xxxxx

Name of the Guide Teacher : xxxxx

Name of the School : xxxxx

Class / Section : X - A

Subject : Geography

Topic : India Population,
Transport,
Communication and
Trade

Sub Topic : Transport

Period : xxx

Duration : 45 minutes

No. of students in the class : xxx

Date : xxx

Learning objectives:

The Students

- Defines the transportation
- Classifies the transportation
- explains the Roadways
- identify the road ways route

- explain the railway
- identify the railway route
- explain the water ways
- discuss the major ports in India
- Differentiate between Inland Waterways. Ocean water ways (sea routes).
- list out the advantages of transport

Teaching Aids:

- Map showing major types of transport in India.
- Chart showing pictures of transport
- Transport models
- Map.

Previous knowledge:

Pupils answer the following questions:

1. What is a transport?
2. How money types of transport?

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
Transport (in British English), or transportation (in American English), is the movement of humans, animals, and goods from one location to another. In other words, the action of transport is defined as a	Define	The teacher defines Transportation The student understands that the transportation.	What is the transportation?

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
particular movement of an organism or thing from a point A (a place in space) to a point B.			
1. Railways, 2. Roadways, 3. Airways, 4. Waterways 5. Pipelines.	Classifies	The teacher classifies the with the help of samples. Students access the Transportation Samples.	How money types of Transportation?
1. The land over which a road is built; a road together with the land at its edge. 2. The part of a road over which vehicles travel; road.	explains	The teacher explains that the roadways transport. The student identifies the transport chart.	Which transport provides door to Door services?
	identify	The teacher ask the student to identify that the roadways transport The student identifies the roadways in India map	Identify India map in National Highway NH-44?
That is a means of transferring passengers and goods on	explain	The teacher explains railway transport	Any four advantages of railways?

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
wheeled vehicles running on rails, which are located on tracks. In contrast to road transport, where the vehicles run on a prepared flat surface, rail vehicles (rolling stock) are directionally guided by the tracks on which they run. Tracks usually consist of steel rails, installed on ties (sleepers) set in ballast, on which the rolling stock, usually fitted with metal wheels, moves. Other variations are also possible, such as "slab track", in which the rails are fastened to a concrete foundation resting on a prepared subsurface		The student explains uses of railway transport in a chart	
A waterway is any navigable body of water. ... The term "inland	explain	The teacher explains that the water ways transport. The	What are the uses of water ways

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
waterway" refers to navigable rivers and canals designed to be used by inland waterway craft only, implicitly of much smaller dimensions than seagoing ships		student identifies models.	transport?
Jawaharlal Nehru Port Trust – Nhava Sheva (JNPT) Navi Mumbai, Maharashtra. ... Port of Mundra. Kutch, Gujarat. Port of Chennai. ... Port of Kolkata – Syama Prasad Mookerjee Port Trust (KoPT) ... V. O. Chidambaranar Port (VOCP) Port of Kandla (Deendayal Port Trust) ... Port of Mumbai. ... Port of Vishakapatnam.	discuss	The teacher discusses the reasons for major ports in India. The student discusses among themselves that the discusses the reasons for major ports in India.	What are the Major seaports in India?

Content		Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
Inland Water-ways Include transport along the coastline	Ocean water ways Include trans-ports through navigable rivers and canals. Coastal and foreign trade usually takes place through oceanic water ways.	differentiate	The teacher explains the differences between Inland Waterways and Ocean water ways. The student differentiates that Inland Waterways. Ocean water ways	Any two difference in Inland Waterways and Ocean water ways
In other words, the action of transport is defined as a particular movement of an organism or thing from a point A (a place in space) to a point B. Modes of transport include air, land (rail and road), water, cable, pipeline, and space. The field can be divided into infra-structure, vehicles, and operations.		Summarize	The teacher summarizes the important points of the topic and the student practices to draw the route maps.	Draw the map of India transport map

Model Lesson Plan - 3

Name of the Student Teacher: xxxxx
Name of the Guide Teacher : xxxxx
Name of the School : xxxxx
Class / Section : VIII - C
Subject : History - Civic
Topic : How the Government works
Sub Topic : Judiciary of State
Period : xxx
Duration : 45 minutes
No. of students in the class : xxx
Date : xxx

Learning objectives:

- Students acquire knowledge in
- State Judiciary
- High Court
- Power and functions of High Court
- District Court

Teaching Aids:

- Chart showing State Judiciary

Previous knowledge:

Pupils answer the following questions:

1. Where is the High Court of Tamil Nadu?
2. Which court is the apex court of any state?

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
Motivation	Identifies	Student gives the correct answer	Which is the apex court of Tami Nadu.
	Identifies	Student gives the correct answer	Where is the High Court of Tamil Nadu located?
Announcement of the topic Judiciary of State The High Court stands as the apex of the state Judiciary. There is a High Court in each state. The State High Court consists of a Chief Justice and other Judges as the president may appoint from time to time. The number Judges in the High Court is not uniform and fixed Chief Justice of High Court is appointed. In consultation	Gain knowledge	High Court of the State Chief Justice of India and State Governor	Which court stands the apex of the State Judiciary? Who appoints the Chief Justice of High Court?

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
of Chief Justice of India and Governor of the state			
Qualification of the High Court Judge. • He must be a citizen of India. • He must have atleast ten years experience as an advocate in one or more High Court.	Gains knowledge	Student gives the correct answer.	What is the qualification of a High Court Judge?
Power and functions of High Courts • High court has been empowered to issue Habeas Corpus, Quo Warrants for the enforcement of the fundamental rights and for other purposes • Every High Court has a general	Understands	Student gives the correct answer	State the power and functions of High Court.

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
power of superintendence over all the lower courts and tribunals within its jurisdiction except military courts and tribunals. • High court has the power to take any case pending before a sub-ordinate court and decide itself • High court controls all sub-ordinate courts in the state. • Like the Supreme Court, the High Court also acts as a court of Record. • For the administrative purpose, each state	Understands	Governor will appoint the District judge.	Who will appoint the District Judge?

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
is divided into number of districts each under the jurisdiction of a district judge. The district court judges were appointed by the Governor.			
Closure Teacher review the important points	Recaptulation	Teacher review the important points and ask few questions.	1. Who appoints the Chief Justice of High Court? 2. What is the Qualification of the High Court judge? 3. State the powers and functions of High Court.

Class / Section : IX - C

Subject : History

Topic	:	Colonialism in Asia and Africa
Sub Topic	:	Economic Impact of British Rule
Period	:	xxx
Duration	:	45 minutes
No. of students in the class	:	xxx
Date	:	xxx

Learning objectives:

The Students understands the

- Economic impact of British Rule
- Zamindary system
- Ryotwari System
- Irrigation in British rule
- Famines in British Rule

Teaching Aids:

- Portraits of Arthur Cotton and Pennycuik
- Map - India under British Rule

Previous knowledge:

Pupils answer the following questions:

1. What is the main revenue of Indian Government?
2. Where is Mullai Periyar Dam?

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
Motivation	identifies	Tax from various sources	What is the source of revenue to run a

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
	identifies	Oil seeds, Sugarcane, Cotton etc.	government? Give the name of any two commercial crops.
Announcement of the topic Economic impact of British Rule • Under Zamindaris / Rayatwari system peasant should pay the tax on land. • Land tax was the main source of revenue in the British rule. Tax collected forcibly • No credit facilities were provided to farmers by the state. They have to depend only money lenders from various communities	Gains knowledge	Land lords are called Zamindars. Land tax	What is the meaning of Zamindars? Which was the main revenue British Rule?
Commercial crops			

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
To get better price, British rule encouraged farmers to raise commercial crops like sugar cane, oil seeds, tobacco, cotton etc. Famines Odisha famine of 1866-67, 1876-778 in Tamil Nadu, Bengal famine in 1943 climbed nearly one third of the population Irrigation The British neglected irrigation in the first half of the 19th Century. Major irrigation canals were built only after the famines. British officials and engineers like Arthur Cotton and Pennycuik help farmers by constructing Mullai Periyar Dam which helps to irrigate agricultural lands in Theni,			

Content	Specification of the behaviour objectives	Learning objectives (Teacher/learner activities)	Evaluation
Dindigul, Madurai, Sivaganga and Ramanathapuram Districts.			
British government could not allot sufficient fund to construct Mullai Periyar Dam Pennycuik went to England and sold his family property and use that amount to complete the Dam.	Gains knowledge	It is in Kerala and maintained by Tamil Nadu Pennycuik	Where is Mullai Periyar Dam. Who helped personally to complete the Dam.
Closure Teacher review the important points	Recaptualisation	The teacher review the important points and ask few questions.	1. where money lenders in Tamil Speaking areas. 2. Which was the main revenue in British rule 3. What were the reasons for famines in British Rule. 4. Who is Penny Cuick? How he helped for farmers?
