PREFACE

This text book titled “ **SCHOOL MANAGEMENT AND ADMINISTRATION**” has been written based on the new Syllabus of the B.Ed. Course of the Tamil Nadu Teacher Education University introduced in 2021. The five units of this subject has been discussed in detail under the following headings:

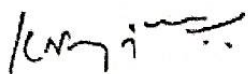

1. **School Management**
2. **Management Approaches**
3. **Educational Administration**
4. **School Administration**
5. **Financing Education in India**

To facilitate the easy understanding of the subject by the teacher-trainees, the contents have been presented under different headings and subheadings. As of our previous works, this book is also written in a lucid style with vivid explanations and apt examples. To help students prepare for their examinations, review questions and the expected answers for the same have been provided at the end of each unit. A set of Model Question Papers based on the University examination pattern with the expected answers for the same cited in the book, have been provided with this book to help students who are to take their B.Ed. Degree Examination under the new syllabus for the first time.

I am thankful to **Mr.C.R. Manivasagan, M.Com., M.Ed.**, former Office Superintendent of Meston College

of Education, Chennai – 14, for collecting materials for some of the units and contributing as co-author of this book and also for his pains-taking efforts in proof reading this book and **Maha Agencies** for neatly printing this book.

Constructive suggestions are quite welcome to refine this book further. I earnestly solicit the continued support of teacher-educators and student-teachers, as they have been offering for my previous works. It will be highly satisfying to me if this book proves useful in the hands of student community.

Chennai

(Dr.K. Nagarajan)

25.04.2022

1. Symbols (A), (B), (C) used in Review Questions refer to Essay, Short Answer and Very Short Answer type questions respectively.
2. Essay type questions are to be answered in about 5 pages.
3. Short Answer type questions are to be answered in about 2½ page.

UNIT – I

SCHOOL MANAGEMENT

1:00 Introduction

Management is a growing discipline and is receiving great attention during the past six decades. Originally the art and science of management was confined to the principles and practices governing multinational corporations and public sector undertakings. Now, it has been realised that management at micro-level is as important as management of giant corporations.

In this unit, Concept, meaning and definition of management, Objectives of management, Characteristics of management, Concept, meaning and definition of School management, Aims and objectives of school management, Characteristics of good school management, Different dimensions of management, Scope of school management, Participatory and non-participatory management, Process of management and Resource management are taken up for detailed discussion.

1:01 Concept and Meaning of 'Management'

The verb 'manage' comes from the Italian word 'maneggiare' which means handle people / tools.

The concept of management has been expounded by **Peter F. Drucker**. According to him management **"is a dynamic process of systematically planning the human and physical resources of an organisation, efficiently integrating every sub-unit in it and making the whole system function effectively so as to achieve the set objectives fully at the optimal cost"**.

From the above concept, the meaning of management is derived as follows :

Management refers to all the tasks and activities undertaken by the people in the organisation for the successful achievement of goals and targets. It involves continuous activities such as planning, organising, leading and monitoring physical, financial, and informational resources. Any organisation's success depends on the strength of those in management positions.

Summing up, we can infer management

- is a systematically planned process
- involves integrating the various categories of personnel, grouped in accordance with abilities and skills
- aims to control and direct the process and environment in which physical and human resources operate together unitedly.
- functions efficiently and achieves optimally high output, evaluated on the basis of objectives of the organisation.

1:01:1 Definition of 'Management'

Experts in the field of management have numerous definitions for the term 'Management' of which a few considered important are given below :

1. **James L. Lundy** : Management is principally the task of planning, coordinating, motivating and controlling the efforts of others towards specific objectives.

2. **F. Drucker** : Management is the multi-purpose organ that manages workers and work.

3. **J.D. Mooney** and **A.C. Railey** : "Management is the art of directing and inspiring people".

4. **Harold Koontz** : "Management is the art of getting things done through and with people in formally organised groups".

5. **Donal J. Clough** : Management is the art and science of decision making and leadership.

6. **George R. Jerry** : "Management is a distinct process consisting of planning; organising, actuating and controlling, performed and accomplish the stated objectives by the use of human beings and other resources".

1:02 Objectives of Management

Management should strive to fulfill the following objectives.

1. Helping in the task of running the institution smoothly and effectively.
2. Framing the policies, rules and regulations.

3. Laying down the internal structure of the organisation.
4. Prescribing the power, authority, functions and responsibilities of the different positions in the organisation.
5. Providing right personnel to right positions in the organisation, to make it function efficiently and effectively.
6. Providing good professional leadership and dynamic supervision.
7. Resolving the various conflicts that arise within the institution.
8. Helping the institution to function with social responsibility and ensuring the socio-emotional development in the community.

1:03 Characteristics of Management

1. **It is an activity:** Management is an activity which is concerned with the efficient use of human and non-human resources of production.
2. **Management is a purposeful activity:** It deals with the achievement of some clearly defined objectives. The purpose of

manufacturing enterprise is to profitably manufacture products for satisfying the consumers. Management is always goal oriented / directed.

3. **It is a social process:** All business organizations are social organizations as they are constituted of men. The management has to control, organize and motivate them.
4. **Management is both a science and an art:** Theoretical knowledge must be supplemented and perfected by practical knowledge. Both are equally important to management. They are the two sides of the same coin and to obtain the best of both.
5. **Management is associated with efforts of a group:** Management is the management of people and not the direction of things. Business activities are group activities. A good management inspires the employees and increases their willingness to work.
6. **Management is getting the things done:** A manager does not do any operating work

himself. He gets the work done by, with and through the people. He has to direct them and develop their talent by adopting technical, human and psychological skills.

7. **Management is an integrating process:** In the sense, it integrates the men, machine and material, to carry out the operations of the enterprise. This integration process is result-oriented.
8. **Management aims at maximization of profits:** It meant for optimum utilization of human and non-human resources which ultimately results in maximization of profits of organization. It is the expectation of the owners from management to bring desired results for the organization.
9. **Management is a profession:** In modern days management is a profession like other recognized professions. Even management is based on certain principles and theories and their application in practice is becoming a must.

10. Management is a universal activity:

Managing involves getting things done through and with the people. Management means getting things done skillfully from others. These techniques and tools of management are universally applicable.

1:04 School Management

1:04:1 Concept and Meaning of School Management

School is a happy home, a sacred shrine, a social centre, a state in miniature of society. It is one of the formal agencies deliberately founded by man to fulfill some of the vital needs of the human society.

School management, in simple words, is managing the affairs of a school.

School Management means running the school along the desired educational policies. It takes into account all aspects of the school (policies, material and human resources, programmes, activities, equipment etc.) and integrates them into a fruitful whole.

1:04:2 Definition of School Management

According to K.C. Ottaway, 'The school may be regarded as a social invention to serve society for the specialised teaching of the young'. Keeping this in mind, setting policies of the school and giving directions to the administration to procure the required physical and human resources and plan programmes and activities so as to optimise student - learning, ensuring sustained maximum output in the form of student achievement with reference to the set educational objectives, is known as school management.

In short, it is the school management which formulates the policies and gather men and materials for running the school successfully and the school administration implements the policies and integrates the various resources available to achieve the set objectives.

1:04:3 Aims and Objectives of School Management

The following are the aims and objectives of school management.

1. To reflect and conserve basic values, norms and practices of the society in which the school operates.

2. To carry out educational futures

Educational futures are drawn mainly from societal futures. As **Harry Broudy** suggested, the major future demand of the society on schooling will be for vocational competence, civic competence and humanness.

3. To manage social change

Material and non-material cultural changes continue to take place in society as a result of which individuals' behaviour too change and this is referred to as social change. Social change may involve new techniques, new ways of living, developing new ideas and formulation of new values.

4. To Profit by experience

Education implies profiting by experience. The aim of education is not only to develop individuals but also make them adjusting members of the society and useful citizens.

5. To Carry-out Modernisation

Modernisation is a process in which man makes changes but at the same time maintains his identity. In a sense, it is a process of outlook of man. In a world predominated by science, school should provide educational facilities in art and culture but provide for advanced science and technology.

6. To Propagate Science

Science involves search for truth. To find truth one has to develop scientific attitude and belief in the method of science i.e. one should get involved in collecting relevant data, analysis and synthesis of the data collected and drawing conclusion. Thus school management should strive to develop scientific attitude among its staff and students.

7. To Adopt Technology

Adoption of technology is the most urgent need of today's society. Schools too should adopt technology in its teaching - learning process, optimising students' learning.

8. To Promote National Integration

Today anti-national elements are raising their heads in the society and in school campuses too. The unity and integrity of the nation is threatened. In this situation, school management should focus its attention on promoting the feeling of national integration among the staff and students.

9. To form character and values

Corruption, bribery, blackmail, dishonesty and selfishness have taken hold of society. Indiscipline, disobedience and indulgence in destructive activities mark the psyche of the students. Given the circumstances, serious thought and attention has to be paid to the formation of character and development of desirable values in students.

1:04:4 Characteristics of Good School Management

1. **Objective Based:** It means to attain the objectives of education and schooling.
2. **Quality of Education:** Good school management is concerned with the quality of education being given in schools.

3. **Headmaster:** He is a democratic leader of the school.
4. **The best use of resources:** In order to promote efficient functioning of the school, it makes the best possible use of the material resources.
5. **Joint Enterprise:** It involves the joint enterprise of all the personnel connected with the school – Teacher, supervisors, pupils, parents etc.
6. **Professional growth:** It brings out the best in the teacher and supervisors and takes steps to promote their professional growth.
7. **Efficiency and Improvement:** It tries to bring out over-all improvement and efficiency in the school.
8. **Continuous process:** It is a continuous process. It is always concerned with improvement and development of the institution.
9. **Input–Output Model:** It works on the input-

output- model. It takes into account the efforts made and the outcomes achieved.

1:04:5 Scope of School Management

Anything and everything having to do something with the education of the child through the agency of the school, will be included in the scope of school management.

In schools run by registered bodies, the elected secretary of the governing body takes care of the day-to-day affairs of the management of the school with the assistance of the headmaster / principal of the school.

The official appointed to represent the management, undertakes the functions like arranging to provide necessary infrastructural facilities required, effecting staff appointment, transfers, promotions, disbursement of staff salaries, salary advances, punishments and penalties, preparation of developmental plans, annual budget preparation and getting approval etc.

The following may be considered as necessary components of school management.

1. Providing the human equipment - headmaster, teaching staff, ministerial staff and menial staff.
2. Providing the material equipment such as building, furniture, farms laboratories, library, museum, art gallery etc.
3. Preparing the curriculum for the different classes.
4. Organisation of a systematic co-curricular programme.
5. Preparing time-table.
6. Maintaining discipline.
7. Organisation of library, museum, hostel etc.
8. Organisation of health and physical education.
9. Organisation of exhibitions and museums.
10. Organisation of guidance service.
11. Maintaining the school records.
12. Providing various auxilliary services like mid-day meals, school uniform, text books etc.

13. Coordinating the work of home, school and community.
14. Supervision of school work.
15. Evaluation of pupil achievement.
16. Financing and budgeting.
17. Co-operating with departmental authorities and implementing the orders of the higher educational authorities.

1:04:6 Participatory and Non-Participatory Management

Participatory management is the practice of empowering members of a group such as employees of a company / teachers of an educational institution or member of a community, to participate in organisational decision-making, in the analysis of problems, development of strategies and in the implementation of solutions. Employees are invited to share in the decision making process of the firm or organisation by participating in activities such as setting goals, determining work schedule and making suggestions. Participative management,

involves more than allowing employees to take part in making decisions. It also involves management, treating the ideas and suggestions of the employees with consideration and respect.

It is used as an alternative to traditional vertical management structures, which has shown to be less effective as participants are growing less interested in their leader's expectations due to lack of recognition of the participant's effort or opinion.

This practice of participative management grew out of human relations movement in the 1920s and is based on some of the principles discovered by scholars, doing in management and organisation studies, most notably the **Hawthorne Experiments** led to the Hawthorne effect.

While group leaders (in the case of schools, it is the Headmaster / Principal, and the Members of the Management Committee) still retain final decision - making authority when participatory management is practised,

participants are encouraged to voice their opinion about their environment. In the workplace, this concept is sometimes considered as organisational democracy or industrial democracy.

1:04:6:01 Four Process Influencing Employee's Participation

The four process which create employee involvement in the management of a firm are :

- i) Information sharing, which is concerned with keeping employees informed about the economic status of the firm or organisation.
- ii) Training, which involves raising the skill levels of employees and offering development opportunities that allow them to apply new skills to make effective decisions regarding the organisation as a whole.
- iii) Employee decision making, which can take many forms, from determining work schedules to deciding on budget or processes.
- iv) Rewards, which should be tied to suggestions and ideas as well as performance.

1:04:6:02 Advantages of Participatory Management

Participatory management may contribute to a more productive environment by :

- i) Minimising social conflicts
- ii) Greater job satisfaction and motivation towards the job done
- iii) More opportunities for employees to use their creativity and innovation which in turn can lead to their increased happiness and independence.
- iv) Employees have more independence and therefore may take more responsibility and pride in their work.
- v) Employees feel like an integral component of the organisation and therefore have more pride, motivation and incentive to fulfill the project.
- vi) Reduced costs through increased efficiency and lesser need to supervision and delegation.
- vii) Participatory management can lead to the empowerment of employees which in turn

could lead to employees taking more risks. These risks can be successful or harmful to the project's productivity level.

1:04:6:03 Disadvantages of Participatory Management

Participatory management practices can lead to the following :

i) **Decision making slows down** : Participatory management stands for increased participation and when there are many people involved in decision making, the process definitely slows down. Inputs and feedback start pouring from each side. It takes time to verify the veracity of the information provided.

ii) **Security Issue** : The security issue in participatory management also arises from the fact that since early stages, too many people are known to lots of facts and information. This information may transform into critical information in the later stages. There is thus a greater apprehension of vital information being leaked out.

iii) Individuals develop egotism / arrogance,

thereby making a tense environment among other members of the institution or organisation.

iv) Egotism / arrogance can result in problems for the supervisors and managers which lead to poor productivity.

v) Individual empowerment may lead to decreased productivity on account of opinions and cultures clashing.

The advantages of participatory management practices seem to outweigh the disadvantages. This however is no assurance that one should adopt it blindly for his / her organisation. Organisations are different and therefore the culture, the human resources. A deep understanding of both is required to ascertain a decision making style in management and adopt the same.

1:04:6:04 Non-Participative Management

Non-Participative management is the practice wherein decision-making is done at the top level like the Board of Management or the principal in the case of an educational institution or the chief executive of a company and is communicated down.

the line to the subordinates for compliance and implementation. Instead of mutual discussion, meek obedience is expected from the employees. Their views and opinions are not considered and respected. Thus non-participatory management is rigid and authoritative and also known as bureaucratic management.

1:04:6:05, Comparison between Participatory and Non-Participatory Managements

S. No.	Participatory Management	Non-Participatory Management
1.	It is flexible and people oriented.	It is rigid and bureaucratic.
2.	Decision emerges from within.	Everything comes from above.
3.	It gives freedom and dignity to every member of the firm or organisation.	Members can not discuss but have to obey the rules and orders.
4.	Motivation comes from within.	Motivation is provided by the manager.
5.	The focus is on the contribution of individual members.	The focus is on the manager / principal / chief executive of the firm / educational institution.
6.	The manager or the chief executive is more like a leader	The manager is more like an administrator.

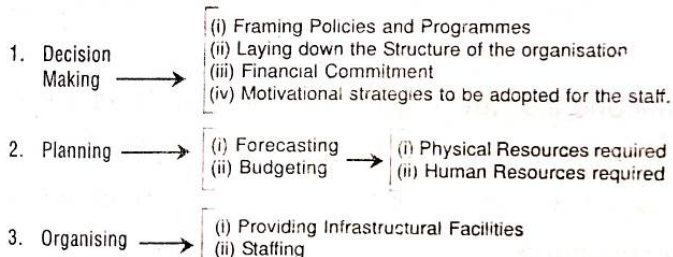

1:05 Components of Educational Management

Education is the provision of a series of learning experiences to students in order to impart knowledge, values, attitudes and skills with the ultimate aim of making them productive members of the society, whereas Educational Management is the process of planning, organising, directing, coordinating and controlling of an institution by utilising human and material resources so as to effectively and efficiently accomplish the functions of teaching, extension work and research.

The major functions of educational management and their related aspects are presented in the flow chart as follows :

Functions

Related Functional Aspects

4. Communicating → (i) with the students
(ii) with parents
(iii) with the staff
(iv) with the Dept. Officials
(v) with the Management Officials
5. Motivating (Directing) → (i) Staff
(ii) Students
6. Coordinating → (i) Personnel
(ii) Resources
7. Evaluating → (i) Performance Appraisal of the programmes
(ii) Performance Evaluation of the Staff
(iii) Evaluation of Student Achievement

Among the above mentioned components of educational management, the important ones are briefly explained below.

1:05:1 Planning

Planning involves working out a broad outline of the activities that need to be done to accomplish the purposes set for the school / organisation. It could be done at the institutional level involving only that institution. Plans are prepared at the district, state and national levels also. In a plan the priorities are listed, targets are fixed and a plan of action is outlined. Resources to implement the plan, time frame and the constraints are carefully considered.

1:05:2 Organising

It is the task of employing suitable persons in adequate number, building the infrastructure and ensuring proper coordination.

Organising also involves establishment of the formal structure of authority through which work subdivisions are arranged, defined, coordinated for the defined objective. Important steps involved in the process of 'organising' are :

- Determination and enumeration of activities and programmes.
- Grouping and assignment of activities.
- Allocation of fixed responsibilities to definite persons and
- Delegation of authority.

1:05:3 Controlling

Controlling in management involves measuring and monitoring performance in accordance with plans and taking corrective actions when required. It establishes performance standards based on the

objectives, measures and reports actual performance, compares the two and takes corrective or preventive action as necessary.

Thus controlling indicates the quantum of goals achieved, the extent of deviation from actual plans, generates accurate information and requisite feedback. Thus controlling focusses upon the difference between the planned and actual performance.

Continuous monitoring and providing feedback, guidance and correction whenever necessary are also the functions of educational management. Performance of the staff should be observed and incentives and disincentives may be used as the occasion demands.

While other management functions are undertaken to get things done through the employees, controlling function is performed to ensure that the work is done properly. Sometimes, this managerial function of controlling, which in layman's terminology means commanding and supervising people, may earn the displeasure and

anger of the subordinates. Every task has time schedule and standard specifications as norms which are to be ensured by the manager through constant monitoring of the performance of his subordinates. Remedial measures are to be effected to correct the course of performance of the subordinates, if norms are not strictly adhered to. Following are some such remedial measures:

- i) Improving the work environment and facilities
- ii) Introducing the required changes in the materials used and procedures adopted
- iii) Examining the level of abilities, devotion and motivation of the subordinates
- iv) Periodically discussing with the workers the accepted norms of the institution and the progress/setback experienced at different phases of time.

Summing up, we can say that controlling is also concerned apart from the teaching and learning process, with the areas of Institutional Budget (finance in terms of income and expenditure)

Institutional supplies (stationery materials and equipment), Library (maintenance and upgradation), Accounts and School Records and Discipline (Staff and students).

1:05:4 Direction

Proper communication with superiors, subordinates and equals is essential. Communication gaps and inadequacy should be avoided. Motivation is implied in direction. Employees should be made to develop enthusiasm for work, involvement and desire to achieve perfection.

1:05:5 Coordination

Persons, materials and ideas are interwoven and it is necessary to achieve the objectives of the management. Managing people becomes difficult at times. Managers should ensure harmony and team spirit among the employees.

1:05:6 Evaluation

All plans, schemes and programmes have to be evaluated to assess their success or failure. Evaluation helps in making future plans more

realistic. Plans to enroll 100% of all children, to promote the education of the weaker sections of society, achievement in public examinations have to be evaluated and reviewed so that in future more effective measures could be introduced.

1:05:7 Recording and Reporting

Records and Registers have to be maintained with correct and up-to-date information. Records of individual students, teachers, receipts and payments are some of them.

1:06 Resource Management

In educational institutions, whatever may be the type of management in its functioning, the important areas of operation which fall under the scope of management are (i) Resources and (ii) Time. Resources are of three types - (a) Human Resources (b) Material or Physical Resources and (c) Financial Resource.

Let us briefly discuss about the following three types of resource management.

1:06:1 Management of Human Resources

Population of a country becomes human resources depending upon level of education, training, aptitude for work and social service of people. In educational institutions, most part of their human resource is constituted by teachers which in turn is governed by their education, training, aptitude, abilities and health. By appointing right persons who have the requisite educational qualifications, training, teaching aptitude, ability to organise various curricular and co-curricular activities for the posts of teachers, an educational institution can function effectively and efficiently. Efficiency of human resource in educational institutions could be further increased by making the working climate pleasant and service conditions attractive with proper salary and perks, opportunities for regular promotions and professional development, arrangements for attending inservice programmes, incentives for achievements etc. Appointing the right persons for jobs, providing guidance to work efficiently, granting academic freedom to the teaching staff to take

initiative and experiment with new instructional techniques, transparent and objective approach in the administration and the will to implement the decisions taken, are some of the important elements of good educational management. The most important function of educational management is to handle the human resources efficiently.

1:06:2 Management of Material Resources

Even though the services of good employees are procured, it is indispensable to provide them the required tools and materials. Many materials and facilities are required in the functioning of an institution. They should be made available adequately at the right time to make the institution function smoothly and effectively.

Many materials and facilities are required in the functioning of an institution. They should be made available adequately at the right time to make the institution function smoothly and efficiently.

Materials purchased for an institution fall under two categories : (i) Consumable goods and (ii) Durable goods.

i) Consumable / Non-Durable Goods :

Materials like chemicals purchased for laboratories and office stationeries cannot be used repeatedly and the stock get depleted as and when we use. Electric bulbs, automobile vehicle tyres, rubber tubes etc. also fall under this category. A consumable stock register should be separately maintained indicating the details like date and quantity of different items purchased, quantity used, date of use and the signature of the person who used it.

ii) Durable / Non-Consumable Goods : Newly purchased fittings and furnitures made of steel or wood, electrical and electronic devices, laboratory equipment, library books, computers, radios, television sets etc. fall under this head. They last long and even if get damaged could be repaired for continued use. When some items of the durables become unrepairable, they should be treated as condemned and deleted from the stock register with the approval of the manager/ designated higher authorities.

It is desirable to conduct internal audit every year, check physically all the materials in the stock and scrutinize various records and registers with the help of suitable teachers in the school.

Stock-checking should be undertaken in the library and laboratories also, before the commencement of summer vacation every year to verify the stock as per the entries in the registers to know the exact position regarding library books, laboratory equipments and devices, computers and related softwares, audio-visual equipments, sports materials etc. Stock registers after due verification, should be placed before the head of the institution / departmental heads and get them counter signed.

1:06:3 Management of Financial Resources

In general, the sources of income of an institution are :

- a) income derived from its immovable properties like land, buildings, farms, shops, gardens etc.
- b) Government grants received

- c) Tuition fees, special fees, penalties etc. levied on students. This forms the sizable chunk of income in self-financing educational institutions only.
- d) Donations received from inland and abroad.
- e) Disposal of waste materials.

The expenses of an institution generally fall under the following heads :

- i) Staff salary, allowances and advances made
- ii) Rent paid for the campus (in some cases only)
- iii) Repair and annual maintenance of buildings
- iv) Procurement of materials and equipments
- v) Taxes paid for the local civic bodies
- vi) Day-to-day expenses incurred for transport, repair and maintenance, electricity and water charges, telephone charges etc.
- vii) Office expenses, stationery and other miscellaneous expenses

Prudent Financial Management

Expenses should be controlled so as to be well within the limits of income. 'Reserve Fund' should be created to meet unexpected contingencies. Unnecessary loans are to be avoided. All expenses under different heads should be well within the budget limits.

Every expenditure should be supported by proper receipts and bills. Bills, vouchers and receipts are to be preserved till the audit is completed.

Conclusion

In this unit, concept, meaning and definition of 'Management' in general, Objectives of management, Characteristics of management, Concept and meaning of 'School management', Definition of School management, Aims and objectives of School management, Characteristics of good school management, Scope of school management, Participatory and Non-participatory management and their comparison, Components

of educational management viz. Planning, organising, Controlling, Co-ordinating, evaluating and recording and reporting, Resource management viz. the three types of resource management - (i) Human resource management, (ii) Material resource management and (iii) Financial resource management were discussed in detail.

Review Questions:

1. What is meant by 'management'? (C)
[Ans: In 1:01, except the 1 paragraph]
2. Define the term 'management' (C)
[Ans: 1:01:1]
3. State the objectives of management. (C)
[Ans: 1:02]
4. List the characteristics of 'management' (C)
[Ans: 1:03]
5. State the meaning of the term 'School management' (C) [Ans: 1:04:1]

6. Give a definition for 'School management'. (C)
[Ans: 1:04:2]
7. Explain the aims and objects of School management. (B) [Ans: 1:04:3]
8. List the characteristics of School management. (C) [Ans: 1:04:4]
9. What is school management? Explain briefly the scope of school management. (B)
[Ans: 1:04:2 + 1:04:5]
10. Explain the concept of 'Participatory' and 'Non-Participatory' management and state the differences between them. Also mention the advantages and disadvantages of 'Participatory management'. (A) [Ans: 1:04:6 + 1:04:6:01 + 1:04:6:02 + 1:04:6:03 + 1:04:6:04 + 1:04:6:05]
11. What is educational management and discuss its components. (A) [Ans: 1:05 + 1:05:1 to the end of 1:05:7]
12. Briefly explain the components - 'Planning', 'Organising', and 'Controlling' of educational
