

Approach' in educational management along with their advantages and limitations. (A)

[Ans: 2:02:1 + 2:02:1:01 + 2:02:1:02 + 2:02:2 + 2:02:2:01 + 2:02:2:02 + 2:02:4 + 2:02:4:01 + 2:02:4:02]

9. Explain briefly the 'Cost-Benefit Approach', 'Social Justice Approach', 'Intra-educational Extrapolation Approach' and 'Demographic Projection' in educational management. (A)

[Ans: 2:02:3 + 2:02:5 + 2:02:6 + 2:02:7]

10. Explain the 'Cost-Benefit Approach' and 'Man-Power Approach' in educational management along with their advantages and limitations.

(A) [Ans: 2:02:3 + 2:02:4:01 + 2:02:4:02 + 2:02:2 + 2:02:2:01 + 2:02:2:02]

UNIT – III

EDUCATIONAL ADMINISTRATION

3:00 Introduction

In this unit, Definition, Aims and objectives, scope, types and functions of educational administration, Relation between educational management and educational administration, Theories of educational administration, Meaning and Nature of leadership, Styles of leadership and Measurement of leadership are to be taken up for a detailed discussion.

3:01 Meaning, Definition and Nature of Educational Administration

3:01:1 Meaning of Educational Administration

'Educational Administration' is regarded as the process of integrating the appropriate human and material resources that are made available and made effective for achieving the purpose of a programme of an educational institution.

The term 'Administration' does not refer to any single process or act. It is like a broad umbrella encompassing a number of process such as planning, organizing, directing, coordinating, controlling and evaluating the performance. The same situation occurs in the field of educational administration. The concept of educational administration is applicable in case of an educational organisation which has certain purposes or goals to fulfill.

In order to achieve these purposes or goals, the head of the educational organisation plans carefully various programmes and activities. Here the educational organisation may be a school, college or university. The head of the school/college/university organizes these programmes and activities with co-operation from other teachers, parents and students. He/She motivates them and co-ordinates the efforts of teachers as well as directs and exercises control over them. He/She evaluates their performance and progress in achieving the purposes of the programme.

He provides feedback to them and brings modifications if required in plans and programmes of the school / college / university. So the totality of these process which aims to achieve the purposes or goals of the educational organisation is called educational administration.

3:01:2 Definition of 'Educational Administration'

Educational administration is defined by scholars in many different ways. To have a clear understanding of the term, we may take the help of the following definitions.

i) **Good** : "All those techniques and procedures employed in operating the educational organisation in accordance with established policies, is defined as administration".

ii) **W.M. Rybun** : Administration is not primarily concerned with arrangements, time-table, scheme of study, type of building, records etc., but it is concerned with the attitude of our work and the children with whom we work. Thus school

administration means the practical measures which are adopted to ensure that the system of our work, which we will use, to be of maximum assistance in carrying out our aims of education and for the benefit of children."

iii) Jesse B. Sears : "In education, administration contains much that we mean by the word government and is closely related in content to such words as superintendence, supervision, planning, overseeing, direction, organisation, control, guidance and regulation".

iv) Surendra Nath Mukherjee : "Educational administration provides appropriate education to appropriate student by appropriate teacher by which they can be able to become the best, by using available maximum resources".

v) Knezevich : "Educational administration is a specialized set of organizational functions whose primary purpose is to insure the efficient and effective delivery of relevant educational services as well as implementation of legislative policies

through planning, decision making and leadership behaviour that keeps an organization focussed on predetermined objectives, for optimum allocation and most prudent care of resources to insure their most productive uses, stimulates and coordinates professional and other personnel to produce a coherent social system and desirable organizational climate, and facilitates determination of essential changes to satisfy future and emerging needs of students and society."

vi) Brook Adams : "Administration is the capacity to coordinate many, and often conflicting, social energies in a single organism, so adroitly that they shall operate as a unity."

vii) Graham Balfour : "Educational administration is to enable the right pupils to receive the right education from the right teachers, at a cost within the means of the state under conditions which will enable the pupils best to profit by their training/"

viii) Paul R. Mort : "Educational administration may be defined as, in large, part "the influencing

of one group of human beings, the pupils, to grow toward defined objectives; utilising a second group of human beings, the teachers, as agents; and operating in a setting of a third group of human beings, the public, variously concerned both with objectives and with means used to achieve them."

ix) L.S. Chandrakant : "Although there is no single accepted definition of administration, there is general agreement that it is concerned with the dealing and coordinating of the activities of groups of people."

From these definitions we conclude that educational administration is :

- 1) making all efforts and agencies work together in unison.
- 2) assisting in the realisation of the aims and objectives of education.
- 3) rendering service to society in its progress and that of the individuals.
- 4) concerned with diverse human beings, the

teachers, students, parents and public, and coordination of their efforts.

- 5) concerned with all those activities undertaken, and fullest utilisation of resources, for education and its purposes through the procedure of organising, ordering, facilitating and improving the efforts of people in the realisation of the goals of education.

3:01:3 Nature of Educational Administration

1. Educational administration doesn't refer to any single process rather different processes or aspects constitute administration. These are planning, organizing, directing, coordinating and evaluation.
2. Educational administration is a non-profit making task.
3. Educational administration is primarily a social enterprise as it is more concerned with human resources than with material resources.
4. Educational administration is more an art than a science. The reason is that human relationship

prevailed here can't be maintained by any set of formulae.

5. Educational administration is similar to general administration in many ways, but it is also dissimilar to general administration in many more ways.
6. Educational administration is a complex affair.

3:02 Aims and Objectives of Educational Administration

We know that educational administration needs integration and co-ordination of all the physical and human resources and educational elements. Besides this, it requires a great efficiency with it based on human sympathy, understanding, knowledge and skill. The physical resources mainly contribute building, equipment and instructional materials.

The human resources include pupils, teachers, supervisors, administrators and parents. The educational elements comprise the various aspects of educational theory and practice including philosophy of education, objectives of education,

curriculum, method of teaching, discipline, role of the teacher, rules and regulations etc.

These elements are "parts, made into whole" and are components brought into harmonious relationship so as to make the whole system functions efficiently. Important objectives of educational administration are :

1. To provide proper education to students

This objective seeks to mention the fact that good education doesn't mean education at a very high cost as is practised in modern public schools. Rather it means the right type of education from the right type of teachers within reasonable cost. **This objective also implies quantitative expansion and qualitative improvement of education.**

2. To ensure adequate utilization of all resources

For adequate realization of all available resources - human, material and financial - efficient planning, execution of plans and coordination is necessary.

3. To ensure professional ethics and professional development among teachers

As teachers are the senior and mature human elements to accelerate the programme in time, their role is highly felt in this regard. They are to be encouraged and given the facility to devise and try out innovative ideas on instruction and to participate in inservice education programmes. In this context, it can be visualized that educational administration should aim at developing a desire for hard work, dedication and commitment for their job among teachers.

4. To organize educational programmes for acquainting students with the art of democratic living and giving them excellent training in democratic citizenship.

5. To mobilize the community

Like general administration, educational administration seeks to maintain and improve the relations with the community. For this, it should seek community support and co-operation for

quantitative expansion, qualitative improvements, smooth and fair examination in the educational system.

6. To organize a variety of co-curricular activities and ensure the participation of all students and promoting work efficiency and skill-development.

7. To get the work done

The most important objective of administration is to get the work done effectively, efficiently and with satisfaction to the individuals and benefits to the society.

8. To prepare students for taking their places in various vocations and avenues of life.

9. To train the students in developing scientific attitude and objective outlook among them towards all aspects and activities of life.

10. To ensure qualitative improvement of education

Good education can be provided to students

by bringing qualitative improvement in instruction. Regular supervision of teaching and guidance for teachers help to ensure quality teaching in schools.

3:03 Scope of Educational Administration

1. The educational administration encompasses all the levels of education in its jurisdiction.

These are:

- a. Pre-primary or pre-school Education
- b. Elementary or primary Education
- c. Secondary Education or High School Education
- d. Higher Secondary or Post-secondary Education and
- e. Higher or Tertiary Education

It is educational administration that determines what should be the nature and system of administration for all the above levels of education.

2. It covers all forms of education such as:

- a. Formal Education

- b. Non-formal Education
- c. General Education
- d. Vocational Education
- e. Special Education
- f. Teacher Education
- g. Integrated Education
- h. Technical and professional Education including Engineering, Medical, MBA, and Computer Education.

Here the educational administration sets the systems of administration in accordance with the objectives and nature of all the levels of education.

3. It includes all types and strategies of management that encompasses the following:

- a. Democratic Administration
- b. Autocratic Administration
- c. Nominal Administration
- d. Real Administration

4. Educational administration covers the following aspects relating to, management in its jurisdiction.

- a. Planning
- b. Organisation
- c. Coordinating
- d. Supervising
- e. Controlling and
- f. Evaluating

5. Educational Administration takes place at various levels such as:

- a. Central level
- b. State level
- c. District level
- d. Block level
- e. Institutional level

Out of these above levels, educational administration has its ground reality and importance at the institutional level. Because it is

the practical ground to test the significance of educational administration in practice.

For this, the following activities and programmes come under the scope of educational administration at the institutional level:

- a. Deciding the purposes of the institution or school.
- b. Planning for academic or curricular and co-curricular activities.
- c. Preparing the time table and the time schedules for various activities.
- d. Assigning duties and responsibilities to the staff members.
- e. Organizing curricular and co-curricular programmes.
- f. Directing and motivating the staff of the institution.
- g. Coordinating the efforts of people to achieve the purpose.
- h. Exercising control over the staff.

- i. Conducting periodical reviews about the progress of achievements and failures of the institution.
- j. Taking measures for staff development.
- k. Maintaining order and discipline.
- l. Management of materials.
- m. Management of finance.
- n. Maintaining records and registers up to date.
- o. Maintaining human relationships.
- p. Supervision of the work of teachers and other employees.
- q. Giving feedback to the teachers performing well and taking remedial measures for teachers not performing well.

Sears has pointed out the scope of administration more specifically in relation to education as follows :

1. Establishing educational purposes, by expressing them in the form of aims and the programme of work in order to accomplish them, i.e. laying out the work of the organisation.

2. Provision and development of the personnel and necessary finances, housing, materials and facilities for carrying out the work of the organisation, i.e., mobilising resources of men and materials for the realisation of the aims of education.

3. Laying down procedures and techniques for the performance of the work and the policies and plans to guide the work, i.e., the curriculum and methods of teaching and supervision.

4. Defining the nature and procedure of use of authority (legal, official and personal) and control (scientific and democratic) by which the administrative process will operate.

5. Deciding about the nature of aims and procedures by which the administrative process will operate.

6. Deciding about the mechanism (structure and relationship) by which authority and power are applied in the administrative process.

3:04 Types of Administration

Centralised and decentralised administration

In smaller states and under dictatorial rule the administration will be directed from the top. In centralised administration power is wielded by a single individual or a small group from the capital and personnel at the lower rungs have no say in framing policies or implementing them. 'I know everything' and 'do as you are directed' will be the prevailing situation.

In larger countries decentralisation is inevitable. The state may be of federal type i.e. consisting of several states and the powers and responsibilities will be demarcated by the national constitution. Modern democracies have opted for decentralisation of power and responsibilities.

There is another classification of administration which falls under three types.

- i) Democratic
- ii) Autocratic or authoritarian

iii) Laissez - faire

3:04:1 Democratic Administration

Democracy is best suited to modern countries and the principles of "government of the people, by the people and for the people" is echoed throughout the world.

In a democracy, power and responsibility are delegated in a hierarchical system to the administrators at different levels. It is participation based on the principles of cooperation, sharing of responsibilities, equality, justice and equal opportunities. Administration reflects this spirit through nurturing leadership qualities and collective decision making.

3:04:2 Autocratic Administration

Autocracy is a system which believes in extracting work through blind obedience and fortunately it is fading away. The state is the highest authority which keeps all powers to itself. Despotic

regimes, military governments, monarchies, Fascist and Nazi regimes, rule by fundamentalists and sectarian groups are unwilling to part with their powers. Sometimes, under benevolent dictatorship sensible decisions are made and implemented without delay. They could maintain discipline and extract more work. But on the whole, they stifle personal freedom and voluntary participation.

3:04:3 Laissez - faire Administration

In this system there will not be any rigid control. Role of the leader is minimal and role of the management is absent. Group of persons directly concerned with the work react to the prevailing situation and take decisions. This freedom is suitable only to select responsible groups.

3:04:4 Comparison of Democratic and Autocratic Administration

Democratic Administration	Autocratic Administration
1. Decisions are taken on the basis of consensus. Staff members are consulted before decisions are taken	Decisions are taken by the authority concerned.
2. It is based on the principle that the 'head' is only the first among equals.	Authority assumes an air of superiority
3. Planning, monitoring and evaluation are carried out in a transparent manner.	Procedures are kept confidential.
4. There is recognition and reward for staff members performing outstanding work.	Achievement and dedicated work will go unnoticed.
5. There is sharing of power and responsibility.	Power is retained by the autocrat.

Democratic Administration	Autocratic Administration
6. Student's views are also taken into consideration.	Students' views are not invited.
7. Team spirit will prevail.	Obedience is expected.
8. Innovations and creativity are encouraged.	Rules and Regulations are enforced.
9. Constructive criticism is welcomed.	No place for dissent.
10. Believes in educating, training and persuasion to introduce changes.	Believes in implementing orders.

3:05 Functions of Educational Administration

The prime concern of administration of any programme is proper accomplishment of the prefixed purposes and goals. This becomes possible through adequate utilization of both human and material resources with the purpose of bringing qualitative improvement of the programme. For this there is the necessity of different aspects of

management which are accepted as the functions of administration. In order to simplify it can be said here that proper management of a programme needs various aspects that are regarded as the functions of administration. These are:

- a. Planning
- b. Organizing
- c. Directing
- d. Coordinating
- e. Controlling
- f. Evaluating

In the field of educational administration, the educational authority as the administrative authority exercises its functions in relation to the above mentioned aspects. Let us discuss these functions briefly, one by one.

a) Planning

Planning involves setting objectives and determining a course of action for achieving those

objectives. In a plan, priorities are listed, targets are fixed and a plan of action outlined. Resources (both physical and human resources) required to implement the plan and the constraints are carefully considered while chalking out a plan.

b) Organising

'Organising' is the function of the administration which involves providing the necessary infrastructure and employing suitable persons in adequate number. Organising is also concerned with 'organisational design' and 'job design'. 'Organisation design' provides a graphic representation of the chain of command within the organisation and 'job design' refers to the duties and responsibilities of individual jobs as well as the manner in which the duties should be carried out.

c) Direction

Direction involves getting the work done through instructions and orders. There should be proper supervision, motivation and communication

on the part of the administrator for getting the work done. The ultimate aim is to see that work is accomplished according to policies and programmes and as per the given instructions and guidance.

d) Co-ordination

Persons, materials and ideas are interwoven and is necessary to integrate them properly so as to achieve the set objective. Managing people becomes difficult at times. Administrators should ensure harmony and team spirit among the employees. Similarly materials resources should be judiciously managed and made available at the right time.

In short, coordination is the integration, unification, synchronization of the efforts of the different departments / sections in the institution / organisation to provide unity of action for pursuing common goals. Coordination is a force that binds all the other functions of administration.

e) Controlling

Controlling involves continuous monitoring and measuring performance, providing feedback, guidance and correction whenever necessary. Performance of the staff should be observed and incentives and disincentives may be used as the occasion demands.

f) Evaluation

All plans, schemes and programmes have to be evaluated in comparison with the target set during planning, to assess their success or failure. Evaluation helps in making future plans more realistic. Evaluation at the school level requires

- (i) Performance appraisal of the programmes
- (ii) Performance evaluation of the staff and
- (iii) Evaluation of students' achievement.

Summing up, educational administration is the process involving the functions of managing resources (both human and material) allocating tasks, coordinating the work of all the staff and

integrating the resources to ensure their optimal use, controlling the performance of the staff through continuous monitoring, providing feedback, guidance and correction whenever necessary. These functions are meant for creating favourable conditions for the educational process and their maintenance at an effective level.

3:06 Relation between Educational Management and Educational Administration

The terms Management and Administration are used interchangeably as if they denote the same thing without understanding that there are subtle distinctions between the two.

1. Management experts like **Sheldon**, **Teard**, **Schultz** and **Sprigol** think the term administration has wider meaning than the term 'management'. Management determines the specific goals and lays down the broad areas within which these goals are to be achieved.

Administration is concerned with the implementation of the policies laid down by the management. **Management makes decisions; administration executes the policies.**

2. In contrast, experts like **Kimball, Fayol** and others view management as a broader concept than administration. They argue that management is the rule making and rule enforcing authority and as such has more functions to perform than administration.
3. The third view is that both administration and management are synonymous. **Peter Drucker** thinks that any attempt to delink planning from doing is futile. **Davis** thinks **management and administration denote one and the same function.**

Similarities between Management and Administration:

Both administration and management involve the basic functions of planning, organising and

controlling. The difference lies in their application rather than meaning. The term 'administration' is generally used in government organisations and 'management' is used in business organisations. Thus, different sets of people do not perform these two different sets of functions.

However, the relative importance of these functions varies at different levels. While policy formulation is done at higher levels, execution is done at lower levels. It is not really matters whether policy formulation or execution is called administration or management. The controversy between the use of terms 'administration' and 'management' has almost disappeared as management institutes make no distinction between them.

Dissimilarities between Management and Administration:

Management theorists who consider management and administration as different hold two viewpoints. According to one viewpoint,

administration is above management and management is part of administration and according to the other, management is above administration and administration is part of management.

i. Administration is above Management

This view is advocated by the American authors viz, **Oliver Sheldon, Spriegal, Theo Haimann, Mc Farland** etc. According to them, administration is a higher level function of framing policies, plans, objectives, etc. and management is a lower level function that deals with implementation of the policies.

According to this viewpoint, thus, administration is a top-level function concerned with framing the organisational plans and policies. Management is a lower-level function concerned with implementation of plans framed by the top-level administrators. Administration deals with policy formulation and management deals with

policy execution. Administration is, therefore, broad and conceptual and management is narrow and operational.

ii. Management is above Administration

This viewpoint is advocated by the British authors, viz., **Breech, Kimball and Kimball, Richman** etc. This view is opposite to the one advocated by the American authors.

According to **Breech**, "Management is a social process entailing responsibility for the effective and economical planning and regulation of the operation of an enterprise in fulfillment of a given purpose or task. Administration is that part of management which is concerned with the installation and carrying out of the procedures by which the programme is laid down and communicated and the progress of activities is regulated and checked against plans".

3:06:1 Comparison between Management and Administration

Educational Management	Educational Administration
1. It is a modern concept and lays more stress on democratic decentralisation and participation.	It is a traditional concept which is autocratic in nature
2. It is mostly democratic and innovative in nature. It gives more importance to human relations and operation.	It lays more stress on rigidity of rules and regulations, aims and objectives, plans and programmes of an educational institution.
3. It is mostly professional and supported by a quantum of scientific principles and precepts, theories and expertise.	It is subjective and mostly guided by the rules of the thumb. (blind implementation)
4. It is result oriented and accountability is emphasised	It is also result oriented and accountability is expected from the staff.
5. It is democratic and participative in nature. It encourages involvement of all functionaries	There is no participative culture and is perceived to be bureaucratic
6. Management is mainly deterministic in nature and lays down broad policies and programmes.	Administration implies the implementation of the broad policies of the management.

3:07 Theories of Educational Administration

Administrative theories are discussed in the historical framework of four models as shown in the flowchart.

Theories of Educational Administration

Classical Organisation Theory includes two different management perspectives : (i) Scientific management and (ii) Administrative management.

3:07:1 Scientific Management Theory

The theory of Scientific management is the brain child of **Frederick Winslow Taylor**. This

theory emphasized on management of work and workers. In its simplest form, the theory follows the idea that there is one best way to do a job and that is to use scientific method. In his view, if a task is scientifically managed, it will increase the productivity by increasing efficiency and wages of workers. Scientific management in terms of time study standards, separation of administrative and employee duties and incentive systems would correct the performance of labours.

The main features of this theory are :

- It finds out best method for performing each job.
- It selects employees by using scientific selection procedure.
- It believes in having close relationship with management and employees.
- It uses division of labour.
- It tries to produce maximum output by fixing performance standards for each job and by having a differential piece rate system for each job for payment of wages.

This theory is based on certain principles. In the year 1911, Taylor gave four principles for scientific management.

1. Scientific Job Analysis : Job should be analysed through observation, data gathering, careful measurement and management. Such job analysis will replace the old rule-of-thumb method.

2. Selection of Personnel : Once the job is analysed, the next step is to scientifically select, train, teach and produce workers. Previously workers chose their own work and train themselves.

3. Management Cooperation : Managers should cooperate with workers to ensure that all work being done should be in line with the principles of Science i.e. scientific method.

4. Functional Supervising : Managers assume planning, organising, and decision-making activities, whereas workers perform their jobs. In the past, almost all work and the greater part of the responsibility were thrust on workers.

Besides the above mentioned principles, **Taylor** has also given two more Principles of scientific management.

1. Performance Standards : Taylor introduced time and motion studies to fix performance standards. For bringing uniformity of work, he fixed performance standards for time, cost and quality of work. As a result, the efficiency of workers could be compared.

2. Differential Piece Rate System : Under differential piece rate system, a standard output was first fixed. Taylor studied that workers did as little work as possible. He felt that under existing wage system, an efficient worker gained nothing extra. Then two wage rates were fixed. These are :

- Low wage rate was fixed for those workers who did not produce the standard output.
- Higher wage rate was fixed for those workers who produced standard output or more than the standard output

By adopting such a system of differential wage

rate, inefficient workers will try to improve their efficiency and efficient workers will be motivated to maintain or improve their production capacity.

3:07:2 Administrative Management Theory

Scientific management focuses on jobs of individual workers, whereas administrative management theory concentrates on the administration of entire organisation. This theory is related to the issues of structure and management of organisation. **Henri Fayol**, **Luther Gulick** and **Max Weber** are the major contributors in the field of administrative management theory.

According to **Fayol**, all managers perform basic functions of management. These are :

- ✦ Planning
- ✦ Organising
- ✦ Commanding
- ✦ Coordination
- ✦ Controlling

Besides the five basic management functions, Fayol has also identified principles of management and these are :

- ✦ Division of Work
- ✦ Authority
- ✦ Discipline
- ✦ Unity of command
- ✦ Unity of direction
- ✦ Subordination of individual interest
- ✦ Centralization
- ✦ Scalar chain
- ✦ Order
- ✦ Equity
- ✦ Stability of personnel and
- ✦ Initiative

These principles emphasize chain of command, allocation of authority, order, efficiency, equity and stability.

Max Weber also recognized the importance of these factors. **Luther Gulick** another classical theorist coined the term **POSDCORB** that refers to seven functions of management. These functions are planning, organizing, staffing, directing, coordinating, reporting and budgeting.

- ✦ **Planning** : It involves developing an outline of things that must be accomplished, and methods for accomplishing them.
- ✦ **Organizing** : it establishes the formal structure through which work divisions are arranged and coordinated to implement the plan.
- ✦ **Staffing** : it involves the function of selecting and training the staff, maintaining the favourable and congenial conditions for the enhancement of professional efficiency of staff.
- ✦ **Directing** : it includes continuous task of making, communicating and implementing decisions.

- ✦ **Coordinating** : it includes all efforts that are needed to bind together the organisation in order to achieve a common goal.
- ✦ **Reporting** : it includes verification of progress through records, research and inspection. It insures that things happen according to the planning.
- ✦ **Budgeting** : it involves all the activities that accompany budgeting, including fiscal planning, accounting and control.

3:07:3 Critical Educational Administration Theory

Critical Educational Administration theory assumes the existence of both objective and subjective knowledge of an objective and unordered reality. So it incorporates the methodologies of both the objective and subjective perspectives. This theory is positioning the existence of objective reality and subjective knowledge of reality. Reality is viewed as being in

a constant state of change. Because of this change, laws are not sought by the critical theorist. Critical educational administration theory provides a means whereby school leaders can understand and ultimately disentangle themselves from the external and internal forces which impose upon educational practice. As **Hoy** (in the year 1994) clarified: "Critical theory attempts to raise people's consciousness about their living and working condition through logic and debate, but in the process it relies on the generation and analysis of ideologies". Critical theorists elaborate the values and practices within schools which maintain the ideological perspective of schools. Topics such as curriculum, teaching and student issues display the inherent social values in the schooling process.

3:07:4 Human Relations Approach

The human relations approach is considered to have started with a series of studies known as **Hawthorne studies** that have strongly influenced

administrative theory as shown in the following flowchart.

Mayo and his associates were not the only contributors to the human relations approach. There were a number of strong intellectual currents which influenced the human relations movement during this period. **Kurt Lewin** emphasized field theory and his research was known as '**Group Dynamics**'. His associates concluded that democratic groups, in which members actively participate in decisions, are more productive in terms of both human satisfaction and achievement

as compared to authoritarian groups. The writings of **Jacob Moreno** made a substantial contribution to the human relations movement. Like Lewin, Moreno was interested in interpersonal relations within groups. He developed a **socio-metric technique**, where people have selective affinities for other people, groups composed of individuals with similar affinities for one another will likely perform better than groups lacking such affective preferences. In the similar way, the human relations approach made relationships between employees and supervisors, the most salient aspect of management. It advocates the training of people in behavioural sciences, such as clinical and social psychology to emphasize building collaborative and cooperative relationships between supervisors and workers. Two key aspects of human relationships approach are **employee motivation** and **leadership style**.

The major assumptions of the human relations approach include the following ideas :

- ★ Employees are motivated by social and

psychological needs and by economic incentives.

- ✦ These needs, including but not limited to recognition, belongingness and security, are more important in determining worker morale and productivity than the physical conditions of the work environment.
- ✦ An individual's perceptions, beliefs, motivations, cognition, responses to frustration, values and similar factors may affect behaviour in the work-setting.
- ✦ People in all types of organizations tend to form informal social organizations that work along with the formal organization and can help or hinder management.
- ✦ Informal social groups within the workplace create and enforce their own norms and codes of behaviour. Team effort, conflict between groups, group loyalty, communication patterns and emergent leadership are important concepts of determining individual and group behaviour.

- ✦ Employees have higher morale and work harder under supportive management which lead to increased productivity.
- ✦ Communication, power, influence, authority, motivation, and manipulation are all important relationships within an organization. In this approach, field study methods as well as laboratory experiments were used to study the work environment and to understand the employee behavior in the workplace.

3:07:5 Behavioural Science Approach

Behavioural scientists considered both the classical rational-economic model and the human relation social model to be incomplete representations of employees in the work setting. **Chester Barnard** was one of the first authors to take the behavioural science approach.

He is best known for cooperative system which refers to integrate in a single framework-human relations and classical management principles. In the year 1938, **Barnard** stressed on two conditions if cooperation and financial success are to be

attained. First, the executive must emphasize the importance of effectiveness, which is the degree to which the common purpose of the organization is achieved. Second, the executive must be aware of efficiency, which is the satisfaction of "individual motives" of employees. In his view, an organization can operate and survive only when both the goals of organization and individuals working for it are kept in equilibrium. It means that, managers must have both human as well as technical skills that are required for goal achievement.

Beside Barnard, another major contributor to the behavioural science approach was **E. Wight Bakke** who embodied a fusion process. **Abraham Maslow** and **Douglas McGregor** are other great contributors to the behavioural approach.

In the year 1970, **Abraham Maslow**, a psychologist advanced a theory of human motivation that was later adopted by many managers.

Theory of Maslow was based on motivation and he considered three viewpoints :

1. Human beings have needs that are never completely satisfied.
2. Human action is aimed at fulfilling the needs that are unsatisfied.
3. These needs can be classified in a hierarchy from the lowest to highest.

In this respect Maslow identified five sets of human needs as shown in the diagram. These needs are :

Abraham Maslow's Hierarchy of Needs Theory

1. Physiological
2. Safety

3. Social belonging
4. Esteem needs
5. Self actualization

3:07:5:01 Theory of 'X' and Theory of 'Y' of McGregor in Educational Administration

But McGregor brought a new perspective to management and challenged managers to think of subordinates as responsible, capable, and creative. He developed two theories: theory X and theory Y.

Managers under theory X tends to be autocratic, control oriented and distrustful. On the other hand, Theory Y managers view subordinates optimistically as individuals who want to take challenges in their working environments, prefer self-control and are capable of responsible independent judgement.

In this light, **Gregar** gave assumptions on which theory X and Y are based.

Theory X Assumptions :

1. The average human being has inherent dislike of work and will avoid it if it is possible.
2. Because of his characteristic of dislike of work, most people must be compelled, controlled, directed and threatened with punishment to get them putforth adequate effort towards the attainment of the objectives.
3. The average human being prefers to be directed, wishes to avoid responsibility, has

relatively little ambition and wants security above all.

Theory Y Assumptions :

- ✦ The average human being does not have inherent dislike for work.
- ✦ People will exercise self direction and self control in the service, or pursuit of objectives to which they are committed.
- ✦ Commitment to objectives is a function of the reward associated with their achievement.
- ✦ The average human being learns under proper conditions, not only to accept but to seek responsibility.
- ✦ The capacity to exercise a relatively high degree of imagination, ingenuity, and creativity in the solution of organizational problems is widely not narrowly distributed in population.
- ✦ Under the conditions of modern industrial life, the intellectual potentialities of the average human beings are only partially utilized.

Theory X	Theory Y
Worker is lazy and dislikes work	People are not lazy by nature but the treatment in organization makes them so
They are unambitious and avoid responsibility	They are ambitious and they accept responsibility under proper conditions
They are not bothered about organizational objectives - they should be directed	They will exercise self control and self direction - need not be directed

3:07:6 Post - behavioural Science Era

In the view of **Murphy** (2002), three interrelated concepts - that are school improvement, democratic community and social justice form the development of the next era of the profession - that is the post - behavioural science era. The behavioural science approach influenced the preparation and practice of school administrators.

School Improvement : Accountability for school improvement is a central theme of state policies. The No Child Left Behind (NCLB) Act of 2001 sets demanding accountability standards for schools, school districts, and states, including new state testing requirements designed to improve education. For bringing school improvement, purpose must be clarified i.e. the school district and the administrators and teachers who work in it are accountable for student learning. It means that what teachers teach and students learn is a matter of public inspection and subject to direct measurement.

Encouraging collective learning : setting state standards should be a collective mission of the school and school district. It means it should not be one man show.

Aligning with state standards : Test conducted by states should be in alignment with their standards.

Providing support : To help all students to achieve high standards, teachers should be

provided with the training, teaching tools and support materials.

Democratic Community : Which is based on the open flow of ideas that enables people to be as fully informed as possible. It involves the use of critical reflection and analysis to evaluate ideas, problems and policies. It places responsibility on individuals to participate in open inquiry, collective choices and actions in the interest of the common good.

Social Justice : It is the core of democracy in which every citizen is treated equally in social, economic, political, and educational areas. Excellence and equity are related to social justice.

Putting in a nutshell, the development of administrative thought can be placed into a loose historical framework of four models; classical organizational theory, the human relations approach, the behavioural science approach, and the post-behavioural science era. The classical "rational" model evolved around the ideas of scientific and administrative management. The

human relations "social" model includes experimentation and analysis of the social and psychological aspects of people in the work place and the study of group behaviour. The behavioural science approach was an attempt to reconcile disagreement between the rational - economic model and the social model. The more recent post - behavioural science era includes the interrelated concepts of school improvement, democratic community, and social justice.

3:08 Leadership

3:08:1 Meaning and Definition of Leadership

Leadership is a process of influencing others in a particular way to accomplish mutual goals.

Peter Drucker says 'Leadership is not a quantitative term. The business with the largest share of a market may have leadership in one segment only. The monopolist or single supplier of a product or of a market never has leadership and cannot have it.'

Kelth Davis defined leadership as the ability to persuade others to seek defined objectives enthusiastically. It is the human factor which binds a group together and motivates it towards goals.

Leadership, according to **Tannenbaum**, is inter-personal influence exercised in a situation and directed through communication process, towards the attainment of a specified goal or goals.

In the view of **George R. Terry** 'Leadership is essentially a continuous process of influencing behaviour. A leader breathes life into the group and motivates it towards goals. The lukewarm desires for achievement are transformed into a burning passion for accomplishment.'

We may conclude that leadership is the process of influencing and supporting others to work enthusiastically towards achieving objectives.

3:08:2 Nature of Leadership

The **'Trait Theory of Leadership'** emphasizes the physical features and personality traits as the basis for a person to achieve leadership.

'Function Theory' rejects outward signs as noted by the Trait Theory. Superior generalised traits do not help all persons to become leaders to shoulder all types of responsibilities. The ability to perform functions determines the possibility of a person to become a leader. A good singer could become a leader of a music party, a good cricketer a captain of a cricket team and so on.

'Situation Theory' believes that under certain circumstances, it is the situation that becomes more important in determining whether or not an individual will become a leader. A leader at wartime, may not shine as a leader during times of peace.

According to the **'Interaction Theory of Leadership'**, the phenomenon of leadership is not fully explained by any of the above three theories - individually and independently. Leadership involves

the combination of all the three theories interacting with each other.

Presently accepted definition of **"Leadership as a process of influencing others in a particular way to accomplish common goals"** neither imposes any specific concept or theory of leadership, nor does it restrict leadership to individuals with particular personal qualities or in particular positions.

According to **Knootz and Odonell**, "Leadership is the ability of a manager to induce subordinates to work with confidence and zeal". The flexibility in covering a wide variety of behaviours while at the same time restricting leadership to its proper setting i.e., the organization - makes this definition invaluable.

By defining leadership as the degree to which an individual influences others in his organization towards the common goal, discourages recognizing an individual as a leader merely on the basis of position held by him in the organization.

True leaders are recognized by their direct or indirect influence on others in the group and, supervisors, and administrators etc. are not automatically considered 'leaders' by being in 'leadership-positions'.

Summing up, we can say 'leadership' is neither determined by physical traits, personality traits, circumstances nor positions held by an individual in the organisation but, is determined by one's ability to influence others and motivate them to work for the achievement of the common goals (or organisations' goals).

3:09 Styles of Leadership

A leadership style is a leader's style of providing direction, implementing plans and motivating people. It is the result of the philosophy, personality and experience of the leader.

Leadership styles could be classified into four categories : (i) Directive or Authoritarian (ii) Participative or Democratic (iii) Laissez-faire or Supportive and (iv) Achievement oriented.

3:09:1 Directive or Authoritarian

Under authoritarian leadership style, all decision making powers are centralised in the leader as with dictators. Autocratic leaders do not ask or entertain any suggestion or initiative from subordinates. The leader gives the specific orders to his staff / subordinates and make it clear what is expected of them; his focus is on planning, organising, coordinating and controlling the activities of the subordinates.

3:09:2 Participative or Democratic

The democratic leadership style consists of the leader sharing the decision-making abilities with his / her staff or group members; shares information and seeks suggestions.

3:09:3 Laissez-faire or Supportive Leadership

In laissez-faire or free-rein leadership, decision-making is passed on to the subordinates. This style of leadership is known as "laissez-faire" which means no interference in the affairs of others.

Subordinates are given full right and power to make decisions to establish goals and work out the problems or hurdles. The leader shows the friendly behaviour to the staff members; he shows his concern for their needs and welfare; creates pleassant organisational climate.

3:09:4 Achievement Oriented

In this style, the leader sets challenging goals; seeks improvement of performance by displaying confidence in the abilities of the subordinates.

3:09:5 Task - Oriented and Relationship Oriented Leadership Styles

Another classification of leadership styles, mention the following two types of leadership styles.

- (i) Task - oriented leadership style and
- (ii) Relationship - oriented leadership style.

Task-Oriented and Relationship-Oriented Style

Task-oriented leadership is a style in which the leader is focused on the tasks that need to be

performed in order to meet a certain production goal. Task-oriented leaders are generally more concerned with producing a step-by-step solution for given problem or goal, strictly making sure these deadlines are met, results and reaching target outcomes.

Relationship-oriented leadership is a contrasting style in which the leader is more focussed on the relationships amongst the group and is generally more concerned with the overall well-being and satisfaction of group members. Relationship-oriented leaders emphasize communication within the group, show trust and confidence in group members, and show appreciation for work done.

Task-oriented leaders are typically less concerned with the idea of catering to group members, and more concerned with acquiring a certain solution to meet a production goal. For this reason, they typically are able to make sure that deadlines are met, yet their group members' well-being may suffer. These leaders have absolute

focus on the goal and the tasks cut out for each member. Relationship-oriented leaders are focused on developing the team and the relationships in it. The positives to having this kind of environment are that team members are more motivated and have support. However, the emphasis on relations as opposed to getting a job done might make productivity suffer.

3:10 Leadership Style and Situations

Different situations call for different leadership styles. In an emergency when there is little time to converge on an agreement and where a designated authority has significantly more experience or expertise than the rest of the team, an autocratic leadership style may be most effective; however, in a highly motivated and aligned team with a homogeneous level of expertise, a more democratic or laissez-faire style may be more effective. The style adopted should be the one that most effectively achieves the objectives of the group while balancing the interests of its individual members.

	Leadership Styles	Situations in which appropriate
1.	Directive	Positive effect on satisfaction and expectancies of subordinates working on unstructured task
2.	Supportive	Positive effect on satisfaction of subordinates working on dissatisfying, stressful or frustrating task
3.	Participative	Positive effect on satisfaction of subordinates who are ego involved with non-repetitive task
4.	Achievement	Positive effect on the Oriented confidence that the efforts will lead to effective performance of subordinates working on ambiguous and non-repetitive task

3:11 Measurement of Leadership

It is extremely difficult to find objective measures of leadership:

1. Leadership was measured by team or work-group productivity

When it was assumed that productivity is a result of good leadership. But this method was not accepted by many.

2. Another method of measuring leadership is the rating technique'

In this technique an individual's leadership ability is judged by a few chosen judges. These may be his superiors or his colleague or his subordinates. The task of the judge is to rate the individual regarding traits he possesses.

Each judge is given a checklist listing a number of adjectives and attributes of leadership qualities. The judge has to indicate the degree to which the individual possesses a particular trait or characteristic listed in the checklist.

3. Nomination Technique

In this technique the employees are required to nominate a few individuals who they consider good and bad leaders. The individual receiving the largest number of positive nominations is easily recognizable as having succeeded in influencing people as a leader.

4. Using the tool LBDQ

One of the tools to measure leadership behaviour is **Leadership Behaviour Description Questionnaire** (L B D Q) developed in Ohio University (U.S.A.) by **Hemphill** and later adapted by **Halpin** and **Winer**. The tool has two dimensions.

- i) Initiating Structure
- ii) Human Consideration

This tool could be used to assess whether the Principal / Head is **structure – oriented** or **consideration – oriented**. Each dimension has 15 items and the total items are 30. All the items are scored on a five point scale (Always, often,

occasionally, seldom, never). The tool identifies four leadership styles.

- i) High initiating structure, high consideration (HS, HC)
- ii) Low initiating structure, high consideration (LS, HC)
- iii) Low structure, low consideration (LS, LC)
- iv) High initiating structure, low consideration (HS, LC)

The tool could be used to find out the observed behaviour of the head of the institution by staff members. This could be compared with the self perception of the head of the institution concerned.

Leaders believing in democratic leadership could strengthen their leadership by periodically getting feedback about how their leadership is perceived by the staff members and make necessary adjustment in their leadership styles.

Conclusion

In this unit, Meaning and Definitions, Aims and

Objectives and Scope of Educational administration, Types and functions of educational administration, Relation between educational management and educational administration, Theories of administration based on the models: (i) Classical organisation theory (Its two perspectives viz. (a) Scientific management theory (b) Administrative management theory), (ii) Critical Educational Administration theory, (iii) Human relations approach, (iv) Behavioural Science approach and (v) Post-behavioural Science approach, Meaning and Nature of leadership, Styles of leadership and Measurement of leadership were discussed in detail.

Review Questions:

1. Explain the meaning of educational administration and present few definitions for it. (B) [Ans: 3:01:1 + 3:01:2]
2. State the meaning and nature of educational administration. (B) [Ans: 3:01:1 + 3:01:3]
3. What is 'Educational Administration'? State its nature, aims and objectives. (A) [Ans: 3:01:1 + In 3:01:2 (i), (iv), (vii), (viii) & (ix) + 3:01:3 + 3:02]
4. What do you mean by 'Educational Administration'? Explain its scope. (A) [Ans: 3:01:1 + 3:03]
5. Discuss the types and functions of administration. (A) [Ans: 3:04 + 3:04:1 to the end of 3:04:4 + 3:05]
6. Explain the relation between management and administration, stating similarities and dissimilarities. (A) [Ans : 3:06 + 3:06:1]
7. Explain the Scientific Management Theory of educational administration. (B) [Ans: 3:07:1]

8. Explain the 'Administrative Management Theory' in educational administration. (B) [Ans : 3:07:2]
9. Discuss the Classical Organisation Theory of educational administration. (A) [Ans: 3:07:1 + 3:07:2]
10. Write a note on 'Critical Educational Administration Theory' in educational administration. (B) [Ans: 3:07:3]
11. Explain the 'Human Relations Approach Theory' in educational administration. (A) [Ans: 3:07:4]
12. Discuss the 'Behavioural Science Approach Theory' in educational administration. (A) [Ans: 3:07:5 + 3:07:5:01]
13. Explain the 'Theory of X' and 'Theory of Y' and list the differences between them. (B) [Ans: 3:07:5:01]
14. Discuss the 'Post-behavioural science approach theory' in educational administration. (B) [Ans: 3:07:6, except the last paragraph]
