

15. Discuss any two theories of educational management. (A) [Ans: 3:07:1 + 3:07:2 + 3:07:3]
16. Explain the meaning, definition and nature of leadership. (B) [Ans: 3:08:1 + 3:08:2]
17. Discuss the different styles of leadership and explain how leadership could be measured. (A) [Ans: 3:09 + 3:09:1 to 3:09:5 + 3:11]
18. Explain how 'leadership' could be measured. (B) [Ans: 3:11]

UNIT – IV

SCHOOL ADMINISTRATION

4:00 Introduction

In this unit, Meaning, Nature, Aims and Objectives and Principles of school administration, Institutional planning, its definition, importance, objectives, characteristics, components and steps involved in preparing an institutional plan, Limitations of institutional Planning, School complex and its meaning, School complex programmes, Characteristics of school complex, Advantages and disadvantages of school complex, Democratic administration in education, School plan and its components, School time-table, Role of Headmaster and Teachers in school administration are taken up for a detailed discussion.

4:01 Meaning of School Administration

School Administration plays a very crucial role in enrolment, retention, staffing, providing physical facilities, supervision and inspection, to improve

the functioning of the system, conducting tests and examinations and ensuring overall discipline.

School Administration deals with human elements and material elements. Human elements include students, teachers, parents and administrative staff. Material elements include funds, buildings and playgrounds and equipments.

4:02 Nature of School Administration

1. School administration is a comprehensive effort intended to achieve some specific educational objectives outlined by duly constituted bodies.
2. It tries to bring all the components of an educational programme into harmonious and fruitful relationship.
3. It adopts the process of decision making, forecasting, planning, organisation, direction, control, coordination, evaluation, recording and reporting.
4. A good school administration succeeds by following flexibility, practicability, conformity

to national goals and achieving stated objectives.

5. It is democratic in nature and takes into consideration all shades of opinion.
6. Decisions are taken after consulting the staff council and student representatives.

4:03 Aims and Objectives of School Administration

Aims and objectives of school administration are as follows :

- i) The primary aim of the school administration is to implement the school curriculum set for different classes in primary / secondary education.
- ii) Appoint teachers, watch their performance and take corrective measures.
- iii) Maintain cordial relationship among staff members.
- iv) Ensure academic freedom for teachers.
- v) Conduct periodical evaluation of students' performance.

- vi) Provide for different co-curricular activities and assign responsibilities to different staff members to organise and conduct them smoothly.
- vii) Plan for institutional development.
- viii) Coordinate with institutions in the neighbourhood.
- ix) Maintain discipline among the students and staff and the sanctity of the school campus.
- x) Take efforts to achieve higher academic, cultural and sports performance consistently, with the help of teachers.
- xi) Take stock of the physical resources of the school periodically and replenish them adequately so as to maintain / improve the facilities / services provided in the school both for students and teachers. Physical resources like materials and equipment are to be procured now and then, to keep the functioning of the school library and laboratories smoothly and effectively.

4:04 Scope of School Administration

Administering the school may be in the hands of Educational officers in the case of government and local body schools and under the responsibility of Secretary/Correspondent of private schools. The administrator either directly or with the help of the principal / headmaster executes the under-mentioned functions.

- 1) Selecting and appointing qualified and competent teaching and non-teaching staff.
- 2) Providing building, play ground and garden
- 3) Supplying books for the library, materials for the laboratory and stationery and equipment to the office
- 4) Providing hostel facilities to the needy students
- 5) Constructing Staff Quarters
- 6) Providing facilities for guidance services, first aid, transport, communication and canteen facilities.
- 7) Organising noon meals to needy students

- 8) Promoting school - community relations
- 9) Evaluation of school programmes
- 10) Evaluation of student achievement
- 11) Maintaining prescribed records and registers.
- 12) Cooperating with the education department

4:05 Principles of School Administration

1. **Principle of sharing responsibility:** John Dewey, the famous American Philosopher, has defined democracy as sharing of experiences. A democratic head shares his responsibility with others. His belief is in the decentralization of power. It enables the leader and the followers to have good mental health.
2. **Principle of equality:** Democracy demands equality of opportunity to all. All are equal in the eyes of common man. A democratic head does not consider himself aloof from others. He feels as if he was one social being in an inseparable unity of the same social structures.

3. **Principle of freedom:** It is one of the unique principle of democracy. The democratic head gives full freedom to the staff so that they may work according to their will.
4. **Principle of co-operation:** The running of a school is not one man's job. It needs combination of many hands and heads. Every member of the school should fully co-operate with their colleagues and with head of the institution.
5. **Principle of justice:** Democratic administration demands full justice on the part of headmaster of the school. The democratic administration will be successful only if the headmaster does justice to one and all. In the democratic administration all are treated alike and get due Importance.
6. **Principle of recognition of individual worth:** In democratic administration, the head shows equality to all. He comes closer to his followers and tries to understand their capability. Quality or merit of each individual is well recognised by him.

7. **Principle of leadership:** Democratic administration needs leadership at different levels. The school administration must possess the qualities of leadership so that others may also follow him. He should inspire, direct, guide and lead the staff, the students, the parents and the community as well.
8. **Principle of democratic Philosophy:** A set philosophies behind every working ensures its success. In a democratic set up of life, a democratic philosophy of the head will make the institution function smoothly and effectively.
9. **Principle of flexibility:** A democratic head of institution believes in the principle of flexibility. He is ever ready to accommodate others in the wider interest of the institution.
10. **Principle of efficiency:** The fact however remains that all people are not capable of doing the same job with equal efficiency. Only some people can do that job in the best way.
11. **Principle of optimism:** School administrator should be fundamentally optimistic in his

outlook and constructive in his policies and procedures.. He should have full faith in the efficiency of his programmes.

12. **Principle of professional growth:** The success of the administrator depends to a large extent on the efficiency of his colleagues and subordinates. Therefore, he should be sincerely interested in the professional growth of his staff in order that they may be able to discharge their duties successfully.
13. **Principle of relative value:** All decisions should be made on the basis of relative values. The betterment of the school or students should be the most important determining factor.

4:06 Institutional Planning

Institutional Plan is a micro level plan. It is prepared at the institutional level by the head of the institution, teachers and parents represented by the Parent Teacher Association. As the needs of every institution varies, the plans also should be such to meet the requirements of the institution,

utilising the maximum possible extent the unutilised or under utilised resources.

4:06:1 Definition of Institutional Planning

Institutional Planning is a programme of development and improvement, prepared by an educational institution on the basis of its felt needs and the resources available or likely to be made available, with a view to improving the school programme and school practices. It is based on the principle of optimum utilisation of the resources available in the school and the community (M.E. Buch).

Thus, institutional planning is a milestone in the journey towards the improvement of education. The teacher is the kingpin in any educational effort. It is for the first time that the teaching community is being asked to act as the planner and executor of national improvement.

4:06:2 Importance of Institutional Planning

Kothari Commission on Indian Education has strongly recommended the adoption of Institutional Planning, as quoted hereunder.

"In view of the great need to improve standards of education at the school level, we recommend that a nationwide programme of school improvement should be developed in which conditions will be created for each school to strive continually to achieve the best results which it is capable of. No comprehensive programme of educational development can ever be put across unless it involves every educational institution and all the main factors connected with it - its teachers, students and the local community - and unless it provides the necessary inducements to make them put in their best efforts".

In another place, Kothari Commission recommends decentralisation in planning. It states "one of the weaknesses of our existing educational system is its rigidity which practically denies freedom from experimentation to teachers and institutions. What is needed is decentralised approach which can permit each institution (or atleast a group of institutions) to go ahead at its own pace and try out new ideas."

4:06:3 Objectives of Institutional Planning

J.P. Naik, who developed the concept of institutional planning has listed the following objectives.

1. to give freedom to the teacher.
2. to make good teachers as effective teachers.
3. to involve every teacher in the formulation and implementation of plans.
4. to emphasise what can be done here and now, rather than waiting for the impossible to happen.

4:06:4 Characteristics of Institutional Planning

Institutional Plan has distinct features as it pertains to one institution only, and plans for its immediate future without much financial aid from the government.

Some of the salient characteristics of Institutional Plan are as follows :

1. Institutional Plan is need based and not grant based.

Needs vary from one institution to another. When grants are given by the education department, they may allot grants for the library, but what they need may be more computers.

2. It is based on present resources

The peculiar feature of Institutional Plan is it asks for grants only to utilise material resources like land, buildings and equipment and idle human resources like talents of teachers and education volunteers fully and usefully.

3. It is task oriented and not money oriented.

The task is selected first, and to achieve it, needed human and material resources are estimated and the plan is finalised.

4. It is scientific in nature

Institutional Plan is prepared on the basis of facts and data and completed in logical sequences.

5. It eliminates waste.

As the plan is realistic and down to earth, the possibility of redundancy and waste is minimal or nil.

6. It involves cooperation.

Institutional Plans are the products of cooperative planning and team work of teachers, education volunteers and administrators.

7. It looks ahead

Institutional Planning helps to solve present problems and also mainly take care of the future developmental needs.

8. It is goal oriented

Definite goals are to be achieved within a stipulated time frame.

9. Evaluation

Institutional Plan is subject to monitoring and programme evaluation.

10. Development

The overall purpose of Institutional Plan is to meet the growing demand for increasing the

infrastructure facilities and improvement of quality.

4:06:5 Components of Institutional Plan

In preparing the plan, each of the six components noted below should be discussed and recorded.

- i) Objectives
- ii) Present status
- iii) Improvement needed
- iv) New / Additional Resources required
- v) Time Schedule
- vi) Programme of Action

4:06:6 Steps in Preparing an Institutional Plan

Usually four steps are followed in Institutional Planning. They are :

1. Survey : Survey should include
 - i) felt needs
 - ii) resources available to meet the needs

- iii) resources which could be mobilised from other sources

2. Preparation : Preparation of a plan indicating

- i) objectives
- ii) targets
- iii) time frame
- iv) cooperation
- v) role allocation

3. Execution : Execute the plan providing

- i) guidance
- ii) active help
- iii) monitoring
- iv) mid - course correction, if necessary

4. Evaluation : Evaluation parameters are :

- i) target achievement
- ii) budget limit
- iii) time schedule
- iv) assessment of delay / failure, if any.

4:06:7 Scope of Institutional Planning

A list of some of the activities and programmes that could be included under various subheadings are given below :

1. **Curricular : Activities**
 - * Organisation of faculty meeting
 - * Demonstration of model lessons by subject experts
 - * Guest lectures by scholars.
 - * Supervised study
 - * Team Teaching
 - * In service Programmes in methodology, evaluation, new syllabi etc.
2. **Cocurricular : Activities**
 - * Conducting Science Fairs, exhibitions, book fairs etc.
 - * Organising trekking
 - * Tree planting
 - * Developing a classroom library
 - * Interschool competitions - literary, sports and cultural

- * Adult literacy campaign
- * Teaching hobbies

3. Beautification : * Campus Cleaning

- of Campus**
- * Minor repairs to school buildings
 - * Levelling the playground
 - * Developing a garden with vegetable and flower plants.

4. Social Service : * Helping 'challenged' students

- * Teaching 'dropouts'
- * Cleaning public places
- * Conducting 'awareness' programmes
- * Processions and meetings.

4:06:8 Limitations of Institutional Planning

Institutional Planning is possible only when powers and responsibilities are decentralised and grassroot planning gets established. Secondly, headmasters and teachers should be trained in the

elements of planning and should have loyalty and commitment to the institution. Thirdly, frequent transfer of staff will disrupt plan implementation. Fourthly the value of nonmonetary inputs such as potentials and talents of teachers and parents cannot be utilised in the present examination oriented education system. Lastly institutional plans should be linked to block level, district level and state level plans to ensure adequate funding.

4:07 School Complex

4:07:1 Meaning of School Complex

School complex is a group of neighbourhood schools, including a number of primary, upper primary, secondary schools and one or more higher secondary schools which function as one educational unit together in an integrated manner. These schools plan their activities to give assistance and receive help from the other schools grouped together in one school complex. They function as one co-operative group for raising the quality of education. The teachers of schools of a locality at all levels join hands and work together

in order to pool their efforts and thoughts for improving the quality of education, through school complex.

4:07:2 School Complex Programmes

School complex programmes are taken up to make the maximum use of the human and material resources available in an area, for all the educands of that area. They provide for organising subject committee meetings, supervision, preparation of teaching aids, inter-school visits, raising standard of teaching and evaluation, and professional growth of teachers. They share the library books, the laboratory facilities, the games material and other programmes of this nature. They seek to bring about qualitative improvement of education by increasing the co-operation of primary, upper primary, secondary and higher secondary schools. The school complex covers a radius of ten miles or so from the central school.

4:07:3 Three Tier Structure

1. Lowest tier : In the lowest tier, each primary or middle school is integrated to eight or ten lower

primary schools of the neighbourhood to form one complex of educational facilities. The pivotal and central middle schools give academic guidance to the neighbourhood schools. The head of the pivotal school provides extension service to the lower primary schools in the neighbourhood. He is incharge and responsible for the proper and effective functioning. A number of committees are formed to achieve this purpose.

2. Middle tier : In the middle tier, all the middle schools in a particular area are related to one high or higher secondary school in its neighbourhood, under the charge of a secondary or higher secondary school acting as the pivotal school and giving guidance to others.

3. Upper tier : In the upper tier, all secondary and higher secondary schools in a particular locality or town are associated with a neighbouring degree college, college of education or State Institute of Education to work co-operatively.

All the above three tiers may work simultaneously and in an integrated manner

separately. All these tiers form one complex of institutional facilities.

4:07:4 Characteristics of School Complex

1. Complex of neighbourhood schools :

School complex is a complex of neighbourhood schools in which are included some primary, upper primary, secondary school and one or more higher secondary schools.

2. Unit for educational development : School complex is a unit for educational development. Neighbourhood schools are woven together to function as one co-operative group for raising the quality of education. At all levels of schools of a locality, the teachers join hands and work together pooling their efforts and or ideas for improving the quality of education.

3. Co-operation : School complex increases the co-operation of primary, upper primary, secondary and higher secondary schools and thus removes the problem of isolation.

4. Thee tiers : There are three tiers of school complex.

5. Better methods of teaching and evaluation : School complex is a unit for introducing better methods of teaching and evaluation.

6. Unit for promotion : School complex is a unit for promoting pupils from one class to the next higher class.

7. Performance of departmental tasks : School complex performs certain tasks presented by the department. It deals with each individual schools in its field.

8. Help in solving problems : The pivotal central school in school complex helps the neighbourhood schools in solving problems.

9. Guidance : The head of the central school helps other schools in the area in planning the work and provides guidance.

10. Committee : Under the chairmanship of the head of the pivotal or nucleus school, each

school complex has a committee of which the heads of the lower and higher primary schools are the members.

4:07:5 Objectives of School Complex

1. To break the isolation : School complex breaks the isolation that exists between one school and the other.

2. To encourage group efforts : School complex promotes co-operative efforts of all the teachers working in the participant schools so that they may exchange their experiences and guide each other.

3. To utilize resources : The school complex makes the best use of existing human and material resources in the schools of that area.

4. To assist solving problems : School complex helps teachers, parents and students to understand the academic problems they are facing and assists them in evolving and devising ways and means to solve them.

5. To assist common planning : The school

complex provides assistance in common and comprehensive planning of development.

6. To improve educational standards : The school complex improves educational standards by removing the inadequacies in the participating schools in the school complex.

7. To provide guidance : The school complex provides guidance to the constituent schools in using better methods of teaching, organising co-curricular activities and planning school improvement projects.

4:07:6 Functions of School Complex

1. Academic guidance : The school complex is to provide academic guidance to the constituent schools in the following areas :

(a) Teaching : The school complex provides guidance to teachers for better teaching of the subject they teach. Subject faculties are formed in each of the school subject. These perform the following tasks :

i) Division of syllabus for preparation of unit plan,

- ii) Preparation, collection and maintenance of charts, maps, models, pictures and other audio-visual aids,
- iii) Discussion on new methods of teaching,
- iv) Model lessons in the constituent schools,
- v) Supervision of lessons by the senior teachers,
- vi) Supervision of the teachers' diaries,
- vii) Preparation of good lesson plans,
- viii) Provision of supplementary reading material,
- ix) Suitable arrangement for remedial teaching for slow learners and backward students,
- x) Team teaching,
- xi) Checking and correction of pupils' written work,
- xii) Special talks on the contents of the subject,
- xiii) Helping various projects,
- xiv) Demonstration of experiments in the science subjects,
- xv) Assistance in the setting up of question bank and conducting of examination

b) Co-curricular activities : They include guidance in following items :

- i) Provision of games material and facilities of the play-ground,
- ii) Provision of guidance to the physical education teacher,
- iii) Services of physical education teacher of the pivotal school to the constituent schools of the complex,
- iv) Inter-school tournaments,
- v) Tours and excursions,
- vi) Provision of first-aids to the constituent schools.

c) School improvement Projects : School complex provides guidance in the field of school improvement projects.

2. Equipment assistance : The school complex provides equipment assistance to constituent schools. The higher school may lend following materials and equipment to the lower level schools.

(i) **Library** : The constituent schools make use of the library in the central school. Some books may be lent by one school to another school.

(ii) **Teaching Aids** : On special occasions the pivotal school or any other school may lend teaching aids, laboratory equipment, maps, models, charts, tape-recorder, radio, television, projector and other audio-visual equipment and furniture to the constituent schools.

(iii) **Material** : The sports materials and material used for dramatics may be lent from one school to another.

(iv) **Play-ground** : The play-ground of a big school may be used by a small school for tournament etc.

(v) **Purchase** : Some of the schools may contribute money to purchase some materials to be used commonly by all schools.

3. Supervision : The head and senior teachers of higher level institutions may supervise the instructional work, organisation work and other

activities of the constituent schools and give their suggestions.

4. Evaluation : To make improvement in the evaluation work of constituent schools, committee is formed to help the teachers in setting up better question papers, in the preparation of cumulative records and conducting new experiments.

5. In-service education and upgrading : Arrangements are made to provide in-service education for teachers and upgrading the qualifications of less qualified teachers. It maintains a central circulating library for the use of teachers. It arranges meetings of all the teachers in the complex, where discussions could be held on school problems, some talks or film shows arranged, or some demonstration lessons given. Short special courses can be organised for groups of teachers during vacations on current topics like programmed instructions, team-teaching, micro-teaching, use of school broadcast, population education etc. Some special topics may be discussed in the content-matter of various subjects. Audio-visual aids may be prepared.

6. Educational Information : For collecting the latest educational literature, educational statistics, educational news and current trends in educational field, the central school may serve as a clearing house of educational information.

7. Institutional Planning : The central schools may guide the teachers of the constituent schools in preparing an institutional plan. Comprehensive activities plan in the academic field, and organisational field, be prepared in accordance with its local conditions by the schools themselves.

8. Administration : The pivotal school may also discharge some administrative functions. If it is run by the government, it may disburse grants to the constituent schools and control the finance. It may take up the task of modification of the curricula to be implemented after getting necessary approval from the department. It may provide substitute teachers in place of those who go on leave in the lower level schools. It may keep one or two teachers in the reserved force to be sent to any school within the complex at the time of need.

4:07:7 Advantages of School Complex

1. Breaking of isolation : School complex may help in breaking of isolation among schools.

2. Learning by other's experience : It may promote opportunities for learning from experience of teachers of other schools. This creates enthusiasm for improvement in school practices and programmes in a co-operative manner.

3. Sharing of resources : The human and material resources of an area may be better utilized for larger number of students. The services of a good teacher may be utilized by other schools as well. The materials and equipment may be shared by all the schools. This provides educational advancement at low cost.

4. Professional development of teachers : The teachers of a school complex may mutually help each other in professional, social and economic development.

5. Improvement in standards : The standards of teaching and evaluation may be qualitatively

raised through the in-service education of teachers of a school complex.

6. Procuring assistance of external agencies : The school complex is in a better position to get the assistance of external agencies for a larger number of teachers and students. Distinguished persons may be invited and equipment may be secured. Specialists in various subjects and activities may disseminate their enriched experiences to the juniors for their guidance.

7. Assuming better administrative control : When a neighbourhood school is made incharge of lower level schools, better administrative control and supervision is assured.

8. Improved performance : Organised by the school complex, internal supervision may enable the teachers to improve their performance in a congenial atmosphere and without any strain or fear.

9. Trial and Evaluation : With its greater resources, the school complex is in a better position

for trying out and evaluating new curriculum, text books, teacher's guides and teaching aids.

10. Economy : Varied type of material resources at the command of the various schools is pooled together for the use of the members of the staff, a lot of economy takes place.

4:07:8 Disadvantages of School Complex

1. Increase in load of work : Effective working of school complex would mean increase of load of work of teachers. As the teachers will also serve, at frequent intervals, in the school of the neighbourhood, it may cause additional burden on the teachers and heads of primary and middle schools.

2. Inferiority Complex : It may also cause inferiority complex among teachers and heads of primary and middle schools.

3. Neglect of duties : The teachers may fritter away their energies in the school complex programmes resulting in neglect of duties and responsibilities towards their own school students.

4. No mutual benefit : The teachers of higher secondary schools may only be assisting others while they are not benefitted by participating in school complex programmes. This problem has to be looked into carefully.

5. Killing of initiative : There is fear of killing the initiative of schools if the school complex tries to impose its decisions on the schools.

6. More burden on child : There is fear of burdening the child with large number of activities which he may not be able to bear. This caution is to be kept in mind while planning programmes of the children.

4:08 Democratic Administration in Education

4:08:1 Meaning of Democratic Administration

Democracy is best suited to modern countries and the principles of "government of the people, by the people and for the people" is echoed throughout the world.

In a democracy, power and responsibility are delegated in a hierarchical system to the administrators at different levels. It is participation based on the principles of cooperation, sharing of responsibilities, equality, justice and equal opportunities. Administration reflects this spirit through nurturing leadership qualities and collective decision making.

4:08:2 Principles of Democratic Administration

In democratic countries like India, administration is decentralised and the mind set of administrators is mostly democratic in outlook. Democratic Administration should be governed by the following principles.

1. A sound philosophy : Philosophy gives direction to administrative policies and actions. Democratic administration should respect the rights of others and care for their welfare. The head of the institution consults teachers and students

before taking a decision and convince them, if he has to disregard their views.

2. Freedom : Freedom of expression, freedom in discharging their academic duties in an innovative or creative manner, right to differ from the official stand point, opportunities to offer constructive suggestions and criticism are part of the academic freedom.

3. Student Centred : Students are the consumers and ultimate beneficiaries of the education system. Steps should be taken to involve them in the achievement of the goals of education. Student leaders should be encouraged to play a positive role in improving the facilities and discipline of the institution.

4. Flexibility : The head of the institution should not blindly follow the rules and precedents. New situations demand new solutions. His approach to problems should be flexible and not rigid, as otherwise he might convert the problem into a crisis.

4:08:3 Measures for promoting Democratic Administration

The head of the institution should demonstrate by his actions that he is following the democratic principles in his day to day administration by following several healthy practices.

1) Staff Council : Staff Council should meet periodically, preferably atleast once in a month, or whenever some urgent problems have to be considered. All the members of the faculty should be given opportunity to express their views and suggest solutions without fear. Headmaster / Principal will preside over it and he should explain the purpose and problems to be discussed, analysed and solved. Staff members should thrashout the problems and come out with suggestions and solutions in a cordial atmosphere

2) Student Self Government : Leadership training and education in the principles of democracy should begin at school level. Election of leaders at class level / course level and also

election of student chairman / general secretary may be held through direct or indirect election.

3) Involvement of Parents : Parents should be familiarised with the programmes and activities of the institution. For this purpose class level and institutional level parent-teachers meeting should be held periodically, atleast once in three months.

4) Social Service : To strengthen the ties with its neighbourhood institutions, schools should undertake programmes like cultural evenings, exhibitions, tree planting, desilting tanks and canals and cleaning public places. Students should be motivated to help the disabled, the sick and the aged.

4:09 School Plan

Physical facilities are essential for the smooth running of an institution. Days are gone where only a handful of students were taught by a teacher under a tree or in the fore court of his house, the wisdom contained in the palm leaves by reading

and exposition. With the advent of mass education and explosion of knowledge, more and more facilities are required to teach and learn modern subjects.

Education Departments of state governments and autonomous bodies like AICTE, NCTE and universities have prescribed the minimum requirements for educational institutions for giving recognition/approval/ affiliation. But a large number of institutions are yet to satisfy those conditions.

Physical resources include the following:

- i) Land (School Campus)
- ii) Buildings
- iii) Classrooms
- iv) Library and reading room
- v) Laboratory
- vi) Museum
- vii) Staff room
- viii) Garden

- ix) Play ground
- x) Furniture
- xi) Equipment
- xii) Hostel
- xiii) Canteen/Lunch Hall
- xiv) Wash room

4:09:1 Recommendations of the Secondary Education Commission (1952)

Secondary education commission headed by Dr.A.Lakshmana Swamy Mudaliar made the following recommendations regarding physical facilities:-

1. Certain amenities for the students such as common rooms, sanitary convenience, provisions for midday meals and refreshments to be taken, retiring room for girls should be provided.
2. Accommodation for teachers with a common room which they can share.

3. A reading room and library.
4. A visitor's room where parents and relatives who have come on business can wait.
5. A separate room for Asst. headmaster if it has such a post.
6. Laboratories and work shops for vocational training are necessary
7. Classrooms should have wide corridors to facilitate easy movement.
8. Adequate space for bicycle stands, basic amenities etc.

4:09:2 Site for an Educational Institution

A suitable site for the school campus should be carefully selected bearing in mind the following aspects:

1. **Surroundings:** Site selected should not be far away from the town. There should be adequate space for the present and some extra space for future development. A site which is

easily assessable by road, train or both and has sufficient water is ideal. The land should not be rocky or very uneven and be free from noise and dusts. Marshy lands should also be avoided.

2. Site selected should preferably rectangular and have a regular contour.
3. Site should be level and slightly elevated to avoid water logging.
4. The land should not be barren but fertile enough to develop garden.

5. Sites to be avoided:

- i) Undesirable surroundings near the school like factory, market etc.
- ii) Crowded streets, heavy traffic.
- iii) Rubbish heaps, stagnant pools of water
- iv) Marshy lands
- v) Adjacent to cremation grounds, burial grounds.

- vi) Place which could be accessed only by crossing a busy road.
- vii) Place nearer to uncovered wells, deep ponds and other dangerous spots.
- viii) Location near a theatre, bus stand or market.

Selection of site should be made only after satisfying 1) Suitability and 2) adequacy. Care should also be taken to find out that the land is free from legal litigations and is free from encumbrance.

4:09:3 Buildings

There are different type of designs for constructing school buildings. They resemble the letters : E, H, L or inverted L, and

The main entrance to the building should face the road.

Buildings should be designed by qualified architects or civil engineers and approved by the concerned authority.

Buildings should be durable and avoid combustible (easily inflammable) materials. Thatched sheds and mud walls are not at all safe. Pucca or semi pucca buildings are recommended. More than two floors may be avoided.

Separate buildings or wings are needed for the following facilities:-

1. **Administrative Block:** It may be nearer to the entrance and preferably in the ground floor.
2. **Library:** A large hall and separate space for a reading room are required.
3. **Laboratory** – a large hall specially designed to fix wash basins, work tables etc. is preferable.
4. **Principal's room** – It may form part of the administrative block. A room or space may be allotted for visitors to wait.
5. **Computer Block** – As computer literacy has been made part of school curriculum, the

computer block may have several rooms with all facilities to provide computer education.

4:09:3:01 Recommendations of Indian Education Commission (1964 –66)

1. In view of the present unsatisfactory position regarding school buildings, it is necessary to take steps to clear the backlog of unconstructed school buildings as well as to provide additional buildings for new enrolment.
2. Allocations of funds for construction of school buildings should be increased in the Central and State budgets, and community resources mobilized on the basis of equalization. Loans and grants-in-aid should be given on liberal basis to private schools for the construction of buildings.
3. The norms and guidance available as a result of the work of a number of committees appointed by the Central and State Governments and on behalf of Ministry of

Works and the Planning Commission, U.G.C and Central Building Research Institute at Roorkee and the Indian Standards Institute, for spacing and planning of school buildings should be put into practice.

4. In view of the shortage of traditional building materials and the cost involved, well-designed and constructed katcha structures should be accepted as a part of school system.
5. In rural areas efforts should be made to encourage local initiative and contribution in putting up school buildings. The "nucleus" approach suggested by the Ministry of Education is recommended for general adoption.
6. Economy in building should be effected in Urban Areas by using locally available materials, omissions of certain finishes and acceptance of lower standard of construction. Temporary structures may be used wherever possible and improved techniques of construction may be adopted in putting up pucca buildings.

7. In order to accelerate provision of school buildings, constructions in rural areas may be entrusted to local communities or village Panchayats, and in urban areas, municipalities and corporations may be utilized for the purpose.
8. In order to supervise and guide the programme of construction of school buildings and introduce improved techniques, an Educational Building Development Group should be set up in each state within the Public Work Department. These groups will standardize details of construction in the region so as to make possible the mass production of the components on a factory scale. A similar Building Development Group should be set up at the center to co-ordinate the work of the state groups.
9. To avoid delays in the construction of government buildings, a separate unit of the P.W.D should be set up for the execution of

educational building programme. At a later stage an Education Building Consortia may be set up to exploit the advantages of industrialized buildings.

10. The economy measures worked out by the Educational building Development Group should be made known to private institutions and grants in aid given on the basis of upper cost limits.

4:09:4 Staff Rooms

Two staff rooms – one for men and another for women should be provided in the middle of the building complex, not far away from the principal's room. Basic amenities should be provided in these rooms. In large institutions staff rooms could be provided subject/department-wise or level-wise.

4:09:5 Classrooms

Classrooms should be sufficiently large, at least 25' X 20' in dimension. Number of classrooms depend upon the number of standards, courses,

sections and the practical components which may require more than one room.

There should be platform stretching either side of a chalk board or black board for the teacher and a screen to display transparencies has to be provided. It is desirable to have a shelf or cup board to store the classroom library.

Every Classroom should be properly ventilated, have sufficient light, power connection and comfortable seating arrangements.

Separate classrooms are ideal, but a few classrooms could be located in a hall with movable partitions, so that they could be used for combined classes and for conducting school or public examinations if necessary.

Classrooms should have verandahs (passage ways) at the entrance side and backside.

4:09:6 Library and Drawing Room

Reading habits have to be encouraged. It is desirable that libraries have different working hours

to enable the students to use it more extensively. Open access system is not available in many institutions. The librarian issues the books required by teacher and students.

A large hall to place the book racks, provide seating arrangements for the users, a news stand to place the newspapers and magazines and an elevated seat in the middle of the hall for the librarian are necessary.

4:09:7 Laboratories

Separate laboratories for physical sciences, biological sciences and natural sciences could be developed wherever possible.

Laboratories should be equipped with the apparatus and materials to conduct experiments and demonstrations relating to the practical assignments suggested in the curriculum.

4:09:8 Play Ground

Play is essential for the physical and psychological well being of children. It is a good

recreation and has great socializing potential.

Organized games according to the age groups of the children have to be taught. Play ground is useful for conducting sports events, physical exercises and yoga practice.

4:09:9 Washrooms

Sanitation is a neglected area in many parts of India. The future generation has to be trained to use sanitary facilities and put a check to diseases. Adequate number of urinals, toilets and wash-basins should be provided to staff members, girls and boys.

Other facilities like auditorium, stadium, swimming pool, conference hall and gymnasium could also be planned if the institutions have surplus funds.

4:09:10 Garden

Native study awakens the curiosity of children. Children like plants, flowers and fruits. Gardening teaches them about soil, climate, vegetables and fruits and food and medicinal value of plants. Gardens add beauty to the school campus

4:09:11 Furniture

Furniture made of wood or steel must be provided in adequate numbers. When ordering for furniture the following considerations should be kept in mind.

1. Furniture must not be of the same size for students of all the classes and of different ages.
2. Benches or stools used for sitting must have backs as support to students.
3. They should be arranged at right angles to the walls so that light is not blocked.
4. They should be arranged in rows providing sufficient space in between to facilitate easy movement of students.
5. The benches in a class should be so arranged that students who sit on them with their knees bending at right angles, the outer edge of the bench being in a perpendicular line with the inner edge of the bench

6. Level desks are less suitable than slanting desks.
7. Top of the desk should be upto the chest level of students so that they may keep sitting erect while reading or writing.

4:09:12 Equipment

Two kinds of equipment could be used. Movable equipment: Gadgets like overhead projectors, Radios, Television sets and boards.

Fixed Equipment refer to light and sound systems, ventilators, water taps, power points etc.

4:09:13 Canteen / Lunch Hall

Noon meal is served in all institutions other than private ones. Lunch halls have to be provided with water taps, drinking water and seating arrangements.

Canteen could be subsidized by way of rent free premises, water and light facilities. They should be prohibited from selling tobacco products,

beverages of doubtful quality or snacks prepared in unhygienic conditions.

4:10 Time - Table

4:10:1 Meaning of School Time-Table

The school time-table is the plan or the chart in a school showing the daily allotment of time among the several subjects, activities and classes. What a school stands for and how it functions can be assessed from the school time-table. It is a mirror that reflects the entire educational programme followed in the school. It is the 'spark plug' of the school which sets its various activities and programmes into motion. It determines how the time and other facilities of the school will be allocated among different users to secure the objectives of education. It is a medium through which is reflected the philosophy of the school as well as time schedules, and professional competence of the Headmaster.

4:10:2 Definitions of School Time-Table

1. Edmonson : "The time-table is an outline of the day's work which indicates (1) Time of beginning and ending of school day; (2) Time of beginning and ending of each class period, activities period, and home work period; (3) Subjects and activities offered; (4) Days on which each class and each activity meet; (5) Name of the teacher incharge of each class or activity; (6) Room in which class or activity meets; and (7) Time, length and number of intermissions."

2. H.G. Stead : "It is the time-table that supplies the frame work within which the work of the school proceeds. It is the instrument through which the purpose of the school is to function."

3. Dr. Jaswant Singh : "The schedule is the spark plug of the school which sets into motion its various activities and programmes."

4. Mohlyuddin : "A time-table is said to be the second school clock. It shows the hours during

which school work is done, what work is to be done during each period of the school-day and in each class, the room in which the work is to be done, and the teacher to be incharge of that work."

4:10:3 Principle of Good Time-Table

While framing the time-table the following principles may be kept in mind.

1. Variety

There should be change of subject from one period to another, difficult and light subjects may follow one another; practical work or games are introduced in between two difficult subjects and at least one period is allotted for creative expression of students through art, literary association or group activity.

2. Sufficient Place for Activities

Activities like physical exercise, yoga, arts and crafts, work education, practical work etc. should find a honourable place in the school time table.

3. Duration of Periods

Duration of periods could be more in the forenoon and less in the afternoon. Further duration of each period of classroom instruction should suit the age of the pupils. A period of 40 minutes and 45 minues in winter for high school and higher secondary schools and 30 minutes for primary school will be quite justifiable for sustaining pupils' interest.

4. Providing the most appropriate work for teachers

While allotting work to teachers, care should be taken that each teacher is assigned those subjects which he is best qualified to teach. Teaching load should be almost evenly distributed, in a just and practical manner. No teacher should be given teaching work for more than two periods consecutively.

5. Provision for best room and equipment utilization

The number and size of classes and classrooms also affect the school time-table. In a school where two classes are held in the same room, the time-table should be drawn up in such a way that one class may do silent work and the other may, at that time, be engaged in vocal work such as reading. The fittings and furniture available in the school also determine the time-table to some extent. Drawing and manual instruction, require specially furnished rooms. All the classes cannot have those subjects simultaneously, even though a particular time in the school day may be the most suitable for them.

6. Avoiding Incidence of fatigue : Children get fatigued at certain school hours or certain days in a week. Following are some measures that tend to minimise fatigue :

- i) The length of the period should decrease with

the monotony and increase with variety of the activity required in the lesson.

- ii) There should be alternation of intense and of easier talks, mental and of physical applications, of study and of recreation. Singing, marching or games, should interrupt sedentary work for about one hour.
- iii) The "hard" subjects should claim the best part of the day never during the opening periods, but only after a certain momentum has been gained. The curve of power on a school day, reaches its highest point only during the second and third periods, and then declines rapidly. Similarly, in the working days of the week one is at best on Tuesdays and Wednesdays, but lethargic on Mondays and Saturdays, Mondays following a visit to home on Sunday. Mondays are days of recollections. Saturdays are full of expectations, as on a Saturday, students should think of visiting their homes the next day.

iv) Age, physical condition and season be considered while fixing the duration of periods. Pupils, in lower classes, need frequent changes of occupation, with short periods to prevent incidence of fatigue. Pupils in higher classes can have longer periods of forty to forty five minutes' duration each. During summer, pupils get tired very soon; hence shorter school periods and shorter school day.

v) The size of the classes should be almost equal. Secondary schools have generally several sections of the same class. There are also groups for optional subjects. These sections and groups should be of uniform size. Too many large and small classes are not desirable in the interests of the school.

7. Variations to suit local conditions :

The needs of the particular locality should be taken into consideration while adjusting the working hours, and the duration of summer vacation, spring recess and winter recess. The needs of a rural

school are different from those of the urban school. Similarly, the needs of the school in a hilly area are different from those of the school in the plains. For example, it is not inconvenient or impractical for a school in the plains to start work at 8.30 a.m. whereas for a school in a hilly area, it is not feasible to start work before 10 a.m.

8. Flexibility

The time-table should be flexible enough that temporary changes could be effected by the head of the institutions as and when it becomes absolutely necessary.

4:11 Role of Headmaster / Headmistress in School Administration

Role consists of one or more recurrent activities, not of a total pattern of interdependent activities which in combination produce the organisational output. Role behaviour of a headmaster refers to the real performance of an individual while in the post of headmaster.

Office is a point (location) in organisational space defined by one or more roles (or activities) intended for performance by a single individual locating him in relation to his fellows (**Katz and Khan**)

Multiple roles could be performed by a single individual. A single role may involve multiple activities. One individual may hold multiple offices. All such possibilities exist.

Major roles of the headmaster :

The headmaster may be said to be performing six roles.

- i) Manager in charge of administration of the school
- ii) Instructional leader
- iii) Facilitator of human relations
- iv) Change agent
- v) Conflict mediator
- vi) Disciplinarian

4:11:1 Manager

- a) Headmaster's primary role is to procure, organise and coordinate both physical and human resources and put them to the best possible use so as to achieve the goals of the organisation smoothly and effectively. His main role is to develop and implement policies and procedures which will result in efficient operation of the institution.
- b) The school headmaster is responsible for the evaluation of student performance and the clear communication of such information according to established and known criteria.
- c) The school headmaster is responsible for a non-threatening and safe environment for all students and staff in school and / or at school related functions.
- d) The school headmaster is responsible for the overall maintenance of the school grounds and school buildings.

- e) The school headmaster monitors all activities at the school and keeps records according to the requirements of the school educational department.
- f) The school headmaster maintains a budget and is responsible for all expenditures of school and base budget funds.
- g) The school headmaster submits, as required all reports to the office of the Director of School Education, in time.
- h) The school headmaster, in cooperation with staff, develops policies for and effectively manages student discipline.
- i) The school headmaster provides for effective communication and interaction with staff, students, parents, community and the office of the Director of School Education.
- j) The school headmaster strives to have all communication promote the understanding of educational goals to staff, students, parents and community.

4:11:2 Instructional Leader

Headmaster is not a mere manager. His duty is to provide leadership to the various instructional activities in his school such as observation, supervision, guidance, organising inservice education programmes and demonstration lessons. He should be expert in one or two subjects but also acquainted with other school subjects. He should peruse the annual plans, notes of lessons and test papers and offer constructive suggestions for improvement.

4:11:3 Facilitator of Human Relations

Authors like **Mary Parker Follett** and **Elton Mayo** highlighted human relations as the key role of the head of the institution. Meeting the just needs of the employees and developing cooperative and harmonious relationships among them for achieving the goals were emphasised by them. Providing a humanistic institutional climate along with high staff morale is important.

4:11:4 Change Agent

Nothing is permanent except change. Headmaster should serve as a catalyst for innovation. It is needless to state that the educational programmes have to be changed and innovations introduced to meet the needs of the changing world. Headmaster may follow the procedure to facilitate healthy changes.

- i) diagnosing the need for change
- ii) developing or selecting an innovation
- iii) Orienting the target group to the proposed change
- iv) Anticipating problems and resistance by pressure groups against change
- v) Implementing the change by ironing out differences and convincing the nochangers - cannot wait till all are ready for the change
- vi) Evaluating the implemented innovation and making modifications and refinements in the light of experience.

Changing an existing practice suddenly or introducing a change for the sake of change, should be avoided. Change should bring in improvement. The headmaster is well advised to adopt the principles stated in **SMART** while introducing changes.

(**S** - Specific, **M** - Measurable, **A** - Achievable, **R** - Realistic, **T** - Time bound)

4:11:5 Conflict Mediator

Clashes of interests and egos lead to conflicts. Inter and intra conflicts occur among teachers, students, parents and social workers which affect the school. Divergent and incompatible views are expressed by conflicting parties. **Morton Deutch** observes "Conflict is the pursuit of incompatible or atleast seemingly incompatible goals, such that gains to one side come out at the expense of the other". Such conflicts are recurring in almost all institutions and the headmaster has to use his persuasive skills to resolve the conflicts to the best of his ability. He should act like a just mediator.

4:11:6 Disciplinarian

Discipline in schools should not take the army as the model. A totally different concept of discipline is aimed at by educators. It is more of self-discipline, cooperation, sense of duty and fairness and dignified behaviour. Though mild punishments are not ruled out, discipline should be promoted through model behaviour, serious advice and persuasion.

Putting in a nutshell, we can say that the school headmaster, by successfully performing the above role in educational administration, can help the members of his team to accomplish the tasks and goals of education and in the process can generate a positive attitude towards his contribution to the institution.

4:12 Role of Teachers in School Administration

Sears has presented the teacher working in

school in the following four roles according to environment:

1. As a superintendent
2. As a supervisor
3. As a planner
4. As a controller

The changes occurring in the field of education have four aspects that can be shown with the help of the following diagram:

We can see that the four aspects of modern education are interrelated and the teachers play an important role in them:

1. **In the role of a superintendent:** Teachers are given several duties in addition to their primary duties, in the teaching - learning process in the classroom, some of which can be in the

administration of the school. They perform these duties on behalf of the headmaster.

2. **In the role of a supervisor:** The teacher has also to work as a supervisor in various functions of the school that fall in the realm of management and may be of the nature of supervising examinations to supervising the administrative staff in the school to performance of various other school activities.
3. **In the role of a planner:** The teacher contributes substantially as a planner who helps the headmaster and other administrative staff with planning of time - table periods, examination duties, results, co-curricular activities, curriculum, text books, and everything else that a school needs to perform in its day-to-day activities.
4. **In the role of a controller:** As part of their duty, the teacher has also to perform the duties of a controller who exercises control over the students, discipline, staff curriculum, time -

table and other related activities of the school.

4:12:1 Responsibilities of the Teacher

Besides teaching, the teacher has got to perform several other functions, and carry out responsibilities, the chief ones being the following:

1. To help the students gain knowledge.
2. To help the students develop character and morality.
3. To help arrange the classes properly.
4. To evaluate various aspects of the students development including character, participating in curricular and extracurricular activities, etc.
5. To help the students develop suitable values helpful to the society.
6. To organize the co-curricular activities.
7. To help the students resolve their problems.
8. To guide and advise the students as may be needed.

9. To make the students able citizens of the nation.
10. To develop social proficiency in the students.
11. To train the students in leadership qualities.
12. To arouse students' interest in professions.

4:12:2 Duties of Teacher

4:12:2:01 Duties of Teacher towards Students

- i) providing instruction following closely the prescribed syllabus.
- ii) motivating students to learn more and more.
- iii) facilitating learning by offering useful help.
- iv) caring for students even after the school hours
- v) maintaining proper psycho-social climate in the classroom.
- vi) participating in co curricular programmes
- vii) offering guidance and counselling services.
- viii) maintaining cordial relationship with students.

- ix) paying special attention to slow learners
- x) improving his capabilities through action research.

4:12:2:02 Duties towards the Institution

- i) cooperating with the head of the institution in the day to day administration.
- ii) willing to work as a member of a team
- iii) maintaining cordial relationship with colleagues.
- iv) involvement in the implementation of institutional plans.

4:12:2:03 Duties towards Community

- i) initiating social education programmes to create social awareness.
- ii) contacting the parents of his students as frequently as possible.
- iii) taking note of the views expressed in parent-teacher association meetings.
- iv) participating in community and social service.

Conclusion

Meaning, Nature, Aims and Objectives and Principles of school administration, Institutional Planning and its definition, importance, objectives, characteristics, components and steps involved in preparing an institutional planning, Limitations of institutional planning, School Complex and its meaning, School Complex Programmes, Characteristics of school complex, Advantages and Disadvantages of school complex, Democratic administration in education, School plan and its components, Time-Table, Role of Headmaster and Teachers in school administration were discussed in detail.

Review Questions:

1. What is meant by school administration? (C)
[Ans: 4:01]
2. What do you mean by school administration? Explain its nature and scope. (B) [Ans : 4:01 + 4:02 + 4:04]
3. What is meant by school administration? State its aims and objectives. (B) [Ans: 4:01 + 4:03]
4. What is meant by school administration? Explain its scope and principles. (A)
[Ans: 4:01 + 4:04 + 4:05]
5. Define 'Institutional Planning'. (C)
[Ans: 4:06:1]
6. Explain the objectives, importance and characteristics of institutional planning. (B)
[Ans: 4:01 + 4:06:3 + 4:06:2 + 4:06:4]
7. What are the components of an institutional plan? How will you prepare a plan for your institution? (A) [Ans : 4:01 + 4:06:5 + 4:06:6]

8. Explain the scope and limitations of institutional planning. (B) [Ans: 4:01 + 4:06:7 + 4:06:8]
9. Explain the concept of 'School Complex' and its functions. (B) [Ans: 4:07:1 + 4:07:6]
10. Explaining the concept of 'School Complex', state its characteristics, objectives, programmes, advantages and disadvantages. (A) [Ans: 4:07:1 + 4:07:4 + 4:07:5 + 4:07:2 + 4:07:7 + 4:07:8]
11. What do you mean by 'Democratic administration in education'? Explain the measures for promoting democratic administration in education. (B) [Ans: 4:08:1 + 4:08:3]
12. What is a 'School Plan'? Discuss the important physical resources it should contain. (A) [Ans: 4:09 + 4:09:1 to the end of 4:09:13]
13. Define 'School Time-table'. Discuss the principles of good time-table. (B) [Ans: 4:10:1 + 4:10:2 + 4:10:3]

14. Discuss the role of headmaster and teachers in school administration. (A) [Ans: 4:11 + 4:11:1 to the end of 4:11:6 + 4:12 + 4:12:1]
15. Explain the role and responsibilities of a school headmaster in school administration. (B) [Ans: 4:11 + 4:11:1 to the end of 4:11:6]
16. Explain the role and responsibilities of teachers in school administration. (B) [Ans: 4:12 + 4:12:1]
17. Explain the duties of a school teacher. (B) [Ans: 4:12:2 + 4:12:2:01 to the end of 4:12:2:03]
