

QUESTION FOR DISCUSSION AND RECAPITULATIONS

1. Explain Meaning, Nature And Scope of Commerce and Accountancy
2. What are the aims and objectives of teaching Commerce and Accountancy in schools
3. Need And Significance of Teaching Commerce and Accountancy
4. What is the need for teaching Commerce and Accountancy in schools
5. What are the values behind Commerce and Accountancy
6. Describe Instructional objectives and behavioral objectives of Commerce and Accountancy
7. Explain the processes of Bloom's Taxonomy of educational objectives
8. Spell out the Revised Bloom's Taxonomy
9. What are the Correlation of Commerce and Accountancy with other Subjects
10. What is meaning of Commerce and Accountancy?
11. What is the nature of Commerce and Accountancy?
12. What is the scope of Commerce and Accountancy?
13. What are the aims of Commerce and Accountancy?
14. What are the objectives of Commerce and Accountancy?
15. What are the goals of Commerce and Accountancy?

UNIT — 2 TEACHING SKILLS

2.1 MEANING OF TEACHING

Who, Whom, Why, Where, What, How And When of Teaching:

A review of the definitions given above reveals that to play his role competently in teaching, a teacher is expected to understand the significance of the following.

1. Who is to teach:

The teacher is to teach and he must understand himself thoroughly his strengths and weaknesses, and strive to present a reasonably good model before his students.

2. Whom to teach:

The child is to be taught. Therefore, a teacher should understand him thoroughly-his abilities, aptitude, attitudes, manners and temperaments and temperaments and accordingly cater to the individual differences of students.

3. Why to teach:

The teacher should always keep in view that the aim of education is to develop harmonious personalities, who are

culturally refined, emotionally stable, ethically sound, mentally alert, morally upright, physically strong, socially efficient and spiritually enlightened. He should not forget even for a moment that the traditionally 3 R's have been replaced by 7 R's that is, reading, writing, arithmetic (representing various disciplines), rights, responsibilities, relationships, and recreation.

4. Where to teach:

The teacher ought not to visualize the school to be merely a place for imparting information but a place where one of tomorrow are trained to take their place as enlightened citizens in the society and contribute to national development.

5. What to teach:

The teacher must have mastery over the subject he teaches.

6. How to teach:

The teacher must use new teaching-learning technology to make his teaching effective and inspirational.

7. When to teach:

Appropriate steps need to be taken by the teacher to develop motivation of the student in the entire work.

2.1.1 Factor Affecting Teaching:

To know factor affecting teaching is so important because after analysis all factors which affecting teaching, teacher can improve himself and can become good teacher and create better citizens for country. If study teaching subjects, we find many factors which affecting teaching which can write in list of these factors.

1. Educational qualification of teacher:

Higher qualified teacher can provide high scholarly instructions which can effect than general graduate teacher. Many teachers hold different degrees which is the sign of their higher education qualification. A teacher is just B.A and other teacher is M.A, M.Ed, PhD, if we compare both, then is sure that higher qualified teacher can code good teaching result.

2. Skill:

Skill is an ability to do any work with better way. If a teacher has teaching skill then he can provide effective teaching. Often says that teaching is God gifted but getting good education training and psychologies best educational books, we can get this skill and create better result. In teaching talent we can include following skills:

❖ Communication skill of teacher

- ❖ Taking teaching aids
- ❖ Technique of teaching
- ❖ Method of teaching
- ❖ Human relation skill

3. Experience of teacher:

Experience of teacher affects also the teaching. After increasing teaching experience, a teacher learns many new things in teaching experience which he can employ in next time teaching. First day teacher may not effect on students but after 5 years teaching, a teacher can more effect on students.

4. Class – room environment:

Class room environment effects also on teaching. This environment is made both by teacher and students. Without both active participation in education, teaching never effects. If the concentration lives in class room and students listen teacher's voice also cares the activity of teacher doing interacting with students.

5. Economic factor:

Economic background of teacher and student is also affected teaching. Even salary of teacher effects on his thinking level. Poor and rich students can also classify economically and sometime these factors can effect on effective teaching.

6. Administrative policies of school or college or university:

Administrative policies also effect teaching. Teacher wants to instruct with his way but administrative policies is not allowed, so the voice of teach can stop and effect of teaching may slow in class room.

7. Subject matter:

Sometime when a teacher teaches that subject in which he is not specialize, he cannot create any effect through his teaching but same teacher can teaches his specialize subject with better way.

8. Parental expectations:

What are the expectations of parent on students? This factor can be defined psychologically. If parent wants to frame up his children doctor or engineer and continually stress on student, sometimes student may not at that rank, so mentally he can create depression and which can stop effective teaching of teacher.

2.1.2 Factors Affecting Effective Teaching

Many factor effect teaching and educational success:

There are a number of factor that can affect how effective you are as a teacher and how successful your students are in mastering subjects. When evaluating your performance as a teacher, as well as other influences that affect your classroom, such as student behaviour, it is important to track how well the changes you make improve performance over time.

1. Appropriate training:

Having the appropriate training to teach a specific subject is an important factor in being able to teach that class effectively. For teaching in the public school system, teachers should have take courses in the subjects they wish to teach. For teaching college level courses, a PhD in the discipline or a related field is normally required, although community colleges accept a master's degree and some universities allow someone with a master's to teach while pursuing a PhD.

2. Clear and concise:

Good communication skills are a must in order to effectively teach, whether you teach middle school or is a college instructor. You must be able to project in a clear way. If students can't keep up with you or have a hard time hearing you, they may also have a hard time understanding the ideas or concepts they need to master to do well on exams and other assignments.

3. Learning environment:

Schools that offer students a positive learning environment, including the use technology in the classroom and a quality library, give students an edge in mastering math, English, science and other subjects. Up-to-date textbooks and other materials to use during lecture and other teacher presentations are also important.

4. Innovative teachers:

Teachers who are good at parking the imagination of students through hands-on learning activities or other creative approaches draw students into the joy of learning. These students no longer see new ideas as something to dread. Educators like Jaime Escalante, a math teacher portrayed in the movie "Stand and Deliver", show that regardless of the economic disadvantage of

many students and school districts, a teacher who uses a creative approach can make a difference.

5. Student behavior:

Managing student behavior and maintaining discipline in your classroom is vital to creating a learning environment where each student feels he can share his thoughts and ideas with you and with his peers. It also helps you stay on track in presenting materials on schedule. This enables you to fulfill the required curriculum for that academic year, semester or quarter.

2.2 MEANING OF MICRO TEACHING

Micro teaching represents an appropriate innovative technique for helping the pupil teacher's being trained in the colleges of education in their acquisition of the desired teaching skills. We can define micro teaching as a sort of specialized training technique that provides appropriate opportunities to the pupil teachers for the practice and development of some specific teaching skills by organizing teaching it its micro form- miniature in terms of class size, time duration and content to be covered. It is a device of imparting training to the inexperienced or experienced teachers for learning the art of teaching by practicing specific skills through a "scaled down teaching encounters" i.e. reducing the complexities of real normal teaching in terms of size of the class, time and content.

The use of micro-teaching technique in reference to the teacher education program adopted in our country may prove advantageous on account of the specific features and characteristics inherent in this technique such as

- ❖ non-dependence over the practicing schools and their students for the practice of skills,
- ❖ Providing opportunity for the practice of one teaching skill at a time,
- ❖ Reducing the complexities of the normal classroom teaching,
- ❖ Providing appropriate opportunities for systematic observation of the teaching and immediate feedback to bring improvement in one's teaching skill, and
- ❖ Providing opportunity to the teacher trainees for the development of their teaching skills in the laboratory like controlled conditions.

The micro-teaching procedure adopted for practicing teaching skills in our teacher Micro teaching is a method which enables teacher trainees to practice a skill by teaching a short lesson to a small number of pupils. Usually a micro lesson of 5 to 10 minutes is taught to four or five fellow students. A supervisor, using an appraisal guide, usually rates the lesson and then discusses it with the teacher trainee, where closed circuit television (cc tv) is available the appraisal guide may be redundant. The teacher trainee may alter his/her approach if necessary and later reteaches the lesson to another group of pupils. This lesson is also rated by the supervisor and then analyzed and discussed with the teacher-trainee.

2.2.1 Origin and Development of Micro-Teaching

The idea of micro-teaching originated for the first time at Stanford University in USA, when an Experimental Project on the identification of teaching skills was in progress under the guidance and supervision of the faculty members (Bush, Allen, McDonald Acheson and many others). This project was aided by Ford Foundation and Kettering Foundation. The team of experts was assigned the development of testing and evaluation tools to measure the attainment of teaching skills. At this juncture Keith Acheson, a research worker was investigating the utility of video tape recorder in the development of technical teaching skills. This instrument could be used for recording the class interaction and the behaviour of the trainee vividly and accurately. This led to the development of a systematic and accurate method of giving feedback to the teacher trainee. All the steps of micro-teaching technique:

Teach → Feedback → Replan → Reteach → Refeedback were formulated. Thus the name of micro-teaching was coined for this method of developing teaching skills in 1963. Since then this technique of teacher training has been widely used in almost all Colleges and Universities of Europe and Asia. In India, it is being used with great emphasis in all the teacher training programmes of developing teaching skills and competencies among teacher trainees.

2.2.2 Some Characteristics of Micro Teaching

- ❖ In micro teaching the trainee can concentrate on practicing a specific, well-defined skill.

- ❖ Micro teaching provides for pinpointed immediate feedback.
- ❖ As micro teaching is scaled down teaching, there is no problem of discipline.
- ❖ Less administrative problems arise as teaching sessions are organized with peers.
- ❖ Micro teaching provides an opportunity to undertake research studies with better control over conditions and situations.
- ❖ Micro teaching can be used as an integral part of teacher training in India as sophisticated gadgetry is not a must.

2.2.3 Assumptions of Micro-Teaching

From the foregoing discussion about the concept of micro-teaching you might have thought of the assumption on which it is based. Let us pinpoint them:

- ❖ Teaching is a complex process but can be analyzed into simplest skills.
- ❖ Teaching skills can be practiced one by one upto mastery level under specific and simplified situation.
- ❖ Appropriate feedback if systematically given proves very significant for obtaining mastery level in each skill.
- ❖ When all skills have been mastered taken one by one, they can be integrated for real classroom teaching.
- ❖ The skill training can be conveniently transferred from simulated teaching situation to actual classroom teaching situation.

2.2.4 Principles Underlying Micro-Teaching Technique

Micro-teaching is based on the premise that teaching can be analyzed into various teaching skills which can be practiced and evaluated. Micro-teaching seems to be based on Skinner's theory of operant condition. This theory is the very basis of feedback session. Skinner's theory of shaping a successive approximations can be applied to explain the acquisition of new patterns of behaviour in teach→feedback → reteach pattern in micro-teaching.

2.3 CONCEPT OF MICRO-TEACHING

Micro-teaching is a teacher training technique which helps the teacher trainee to master the teaching skills. It requires the teacher trainee

- ❖ To teach a single concept of content
- ❖ Using a specified teaching skill

- ❖ For a short time
- ❖ To a very small member of pupils

In this way the teacher trainee practices the teaching skill in terms of definable, observable, measurable and controllable form with repeated cycles till he attains mastery in the use of skill.

2.3.1 The Steps in a Microteaching Session:

1. PLANNING:

This involves selection of the skill to be practiced, awareness of components of the skill, selection of a suitable concept, writing of micro lesson with specific objectives.

2. TEACHING:

The following setting is suggested for the micro teaching technique.

Time: 5 minutes

Students: peer group-5 or so in number

Supervisors: for 2

If possible, use of CCTV facility could be made to enable the teacher trainee to get a firsthand look at his weaknesses.

3. FEEDBACK:

This is a vital aspect of the micro teaching cycle. To be effective it must be clearly related to the model of the teaching skill used. Appraisal guides add to the comments of the supervisor and fellow students, they focus the feedback on to specific behaviours and can be used for the analysis session or be just given to the teacher trainee with a written comment or rating of his/her skill performance.

4. REPLAN:

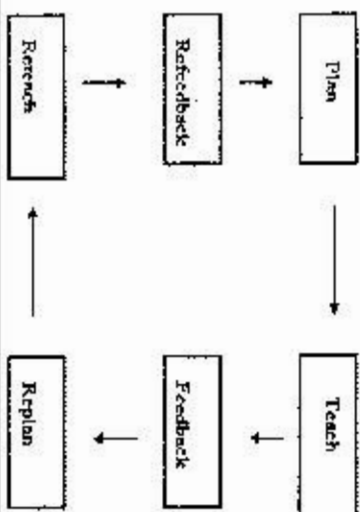

Keeping in mind the feedback received from the supervisor the teacher trainee replans his/her micro lesson writing another micro lesson plan or editing the existing one.

5. RETEACH:

The teacher trainee re teaches, incorporating the suggested changes with the same students or another group of 5 students. Supervisor checks to see whether there is any improvement in skill attainment.

6. RE-FEED BACK:

The supervisor assesses the lesson again pointing out the improvements and lapses.

integration of Skills in real teaching & improve performance

Teaching ladder-10 steps to make effective teaching

2.3.2. Phases of Micro-teaching

There are three phases of the Micro-teaching procedure which you have studied in the previous section of this Unit. They are:

1. Knowledge Acquisition Phase.
 2. Skill Acquisition Phase.
 3. Transfer Phase of Micro-teaching.
- Let us discuss these phases one by one.

VARIOUS PHASES INVOLVED IN A MICROTACHING ACTIVITY

Knowledge Acquisition Phase: In this phase the teacher trainee learns about the skill and its components through discussion, illustrations and demonstration of the skill given by the expert. He learns about the purpose of the skill and the condition under which it proves useful in the teaching-learning process. His/hers analysis of the skill into components leading to various types of behaviours which is to be practiced. The teacher trainee tries to gain a lot

about the skill from the demonstration given by the expert. He discusses and clarifies each and every aspect of the skill.

Skill Acquisition Phase: On the basis of the demonstration presented by the expert, the teacher trainee plans a micro-lesson, lesson for practicing the demonstrated skill. He practices the teaching skill through the Micro-teaching cycle and continues his efforts till he attains mastery level. The feedback component of micro-teaching contributes significantly towards the mastery level acquisition of the skill. On the basis of the performance of teacher trainee in teaching, the feedback is provided for the purpose of change in behavior of the teacher trainee in the desired direction.

Transfer Phase of Micro-teaching: After attaining mastery level and command over each of the skills, the teacher trainee integrates all these skills and transfer to actual classroom teaching is done during this transfer phase.

2.3.3 Advantages of micro teaching

- ❖ Micro teaching is useful for developing teaching efficiency in pre service and in service teacher education programmes.
- ❖ Micro teaching can be either in real class room conditions or in simulated conditions.
- ❖ The knowledge and practice of teaching skills can be given by the use of micro teaching.
- ❖ Micro teaching is a training device for improving teaching practice and prepares effective teachers.
- ❖ It focuses attention on teaching behavior to modify and improve in the desired direction.
- ❖ Micro teaching is an effective feedback device for the modification of teacher behavior.
- ❖ Micro teaching minimizes the complexities of the normal classroom teaching by scaled down teaching.
- ❖ Micro teaching permits increased control and regulates teaching practice.
- ❖ The demonstrations of model lessons in micro teaching are possible through video-lessons and short films.
- ❖ Safe practice ground.
- ❖ The complexity of teaching is simplified in to teaching skills.
- ❖ Useful in pre service teacher-education programme.
- ❖ Training device for improving teaching practice.
- ❖ Effective feedback device.
- ❖ Individualized method of training.

- ❖ Permits increased control and regulates teaching practice.
- ❖ Economical device.
- ❖ Provides for effective use of electrical and electronic device.
- ❖ Concentrates on modification of teacher behavior.

2.3.4 Drawbacks (limitations) of micro teaching:

- ❖ Micro teaching tends to reduce creativity of teachers.
- ❖ Its application to new teaching practices is limited.
- ❖ It requires competent and suitably trained teacher educators for its successful implementation.
- ❖ Micro teaching alone may not be adequate. It needs to be supplemented and integrated with other teaching techniques.
- ❖ Micro teaching is very time consuming technique.
- ❖ The list of skills is not exhaustive and does not apply to all subjects.
- ❖ Too much fragmentation of skills is not considered convention or practical for training.
- ❖ Some skills tend to overlap each other.
- ❖ Different skills are required for different stages and for different subjects which are difficult to formulate and achieve. Only a few basic skills such as questioning, explaining, stimulus variation, management of class are common and can be developed.

2.3.5 Teaching Skills and their Specifications

S.No.	Skill	Components
1.	Skill of introduction	❖ Preliminary Attention Gaining ❖ Use of previous knowledge ❖ Use of appropriate device ❖ Link with new topic
2.	Skill of explaining	❖ Beginning statement; ❖ Explaining links; ❖ Concluding statement; ❖ Questions to test pupils' understanding; ❖ Don'ts ❖ Irrelevant statement, ❖ Lacking in continuity, ❖ Vague words and phrases.
3.	Skill of questioning	❖ No response situation ❖ Wrong response Situation ❖ Partially correct response situation ❖ Incomplete response situation ❖ Correct response situation

4.	Skill of Probing Questions	❖ Prompting, ❖ Seeking further information, ❖ Redirection, ❖ Focusing, ❖ Increasing critical awareness.
5.	Skill of Explaining	❖ Clarity, ❖ Continuity, ❖ Relevance to content using beginning ❖ Concluding statements, ❖ Covering essential points.
6.	Skill of Illustrating with examples	❖ Simple, ❖ Relevant and interesting examples ❖ appropriate media, ❖ Use of inducts, ❖ Deductive approach.
7.	Skill of Stimulus variation	❖ Body movements, ❖ Gestures, ❖ Change in speech pattern, ❖ Change in interaction style, ❖ Pausing, ❖ Focusing, ❖ Oral-visual switching.
8.	Skill of Reinforcement	❖ Use of praise words and statements, ❖ Accepting and using pupils' idea, ❖ Repeating and rephrasing, ❖ Extra vertical cues, ❖ Use of pleasant and approving gestures and expressions, ❖ Writing pupils' answer on the black board.
9.	Skill of achieving closure	❖ Consolidation of Major Points (CMP) ❖ Providing opportunities for the pupils to apply the new knowledge to various situations: (OP) ❖ Linking previous knowledge to new knowledge and new knowledge to future knowledge of the students (LK) ❖ Home Work or Assignment (HW)
10.	Skill Use of Black-board (BB)	❖ Body language ❖ Proximity ❖ Touch ❖ Eye-contact ❖ Chronemics ❖ Smell ❖ Vocalics

11. Skill Use of Black-board (BB)	- Title of the unit written at correct place on Black-board - Clear and organized Black-board - Space organized on BB for student participation - Writing size visible to all - Relevant important points - Students answer-points on Black-board - Creates interest/ helps understand unit - Forms concept, idea, and relationship - BB used for recapitulation - Assess students understanding
	OR Components of the skill of blackboard writing are: - Legibility - Size and alignment - Highlighting main points - Utilization of the space - Blackboard summary - Correctness - Position of the teacher and - Contact with the Pupils.
12. Classroom Management	- Call pupils by names, - Make norms of classroom behaviour, - Attending behaviour reinforced, - Clarity of direction, check non-attending behavior, - Keep pupils in Eye Span, - Check inappropriate behavior immediately.

2.4 WHAT IS MICRO-TEACHING?

Micro-teaching is a scaled-down teaching technique developed for the training of pre-service and in-service teachers. It can also be used as an effective method of coaching. The class size is reduced to a maximum of 10 pupils, and the time duration allotted for practicing each skill is up to 10 minutes. The topic size and classroom complexities also get reduced.

- The core skills to practice are as follows:
- Lesson planning:** A teacher needs to micro plan a lesson for effective delivery and high learning outcomes. Micro lessons should be relevant, concise, and logically organized.

- Lesson introduction:** A teacher needs to be well prepared on a topic. They should set a context to the lesson being delivered and explain the activities briefly to keep learners interested for the rest of the session.
- Posing questions:** It's important for a teacher to develop the skill to ask questions at an appropriate time to check students' level of absorption of concepts and invite questions from them to clarify their doubts.
- Reinforcement:** A teacher is expected to inspire spontaneous and enthusiastic participation of learners, and also to revise lessons for improving knowledge retention.
- Stimulus variation:** A teacher always faces a challenge to maintain a high level of attention of learners, which may be achieved through a variety of gestures, tonal quality, and speech variations, humor, and positive body language.
- Explaining:** It involves the ability to understand concepts thoroughly and articulate them to the learners with clarity.
- Illustrating with examples:** A teacher should be able to explain a concept through relevant examples, illustrations, working models, or any known natural phenomenon.

The list of skills mentioned above is indicative. Meticulous practice and adoption of the skills will help graduate a pre-service teacher to a higher level.

2.5 WHAT IS THE MEANING OF MACRO-TEACHING?

The meaning of macro-teaching could be understood etymologically. The word 'macros' originated from the Greek word 'Makros', meaning long and large. The macro-teaching technique indicates that content is being delivered to a larger audience, for example, a class of 40 students, and for a longer period of time, usually up to an hour or more. Learners are expected to take assessments, usually written tests or projects, to demonstrate their learnings. A business may use macro learning for onboarding and induction programs to provide an overview of the organization and for compliance and transformation initiatives to set the context, provide an overview and articulate a common understanding of future possibilities. The world of classrooms, workshops, and lectures are synonymous with macro-teaching.

skills and type of instructional delivery. Following are some of the features of macro-teaching:

- ❖ The various features of macro-teaching involve instructors, coaches, mentors, and the domain knowledge delivered over time and focus on the overall development of students.
- ❖ Macro-teaching skills effectively help in mapping out teaching strategies and methods. They help evaluate the effectiveness of a teaching strategy in terms of learning outcomes.
- ❖ Macro-teaching skills help anticipate problems faced by students in advance and come up with effective solutions.
- ❖ Macro-teaching skills help in improving both learning outcomes and teaching methods. They help in designing an efficient curriculum plan for a subject to be taught for an academic year and identify resources and materials required in the classroom (teaching aids).

The above-mentioned features of macro-teaching aid teachers and students to gain a better learning outcome and a deeper understanding of new knowledge, all while developing and expanding perspectives.

A teacher may apply the following steps of macro-teaching for lesson planning and content delivery:

- ❖ Learning objectives should be first identified.
- ❖ A realistic timeline should be created to complete a syllabus.
- ❖ Specific learning activities should be planned in congruence with learning objectives.
- ❖ A lesson should be sequenced to deliver it in an engaging manner and reinforce learning.
- ❖ An effective battery of evaluation tests should be planned to assess the learning outcomes of students.

These points may resolve your basic question, what is macro teaching? It's a long-term approach toward completing a syllabus by implementing thorough lesson planning, delivery, and evaluation tests.

2.6 DIFFERENCE BETWEEN MICRO-TEACHING AND MACRO TEACHING

The delivery of teaching content could be done by teachers by blending micro-teaching and macro-teaching techniques. The right

blend of these teaching strategies has to be implemented to continuously improve the learning outcomes of students along with the skills of a teacher. Each method of micro and macro teaching offers its unique benefits, shapes teaching strategies, provides different levels of learning outcomes and creates customized evaluation parameters. Following is the difference between micro and macro-teaching.

MICRO-TEACHING

- ❖ Micro teaching occurs when a teacher works with a small group of students for a short period of time.
- ❖ Micro teaching occurs when a teacher works with small groups of students he/she has formed based on their reading ability.
- ❖ Micro lesson planning happens when a teacher creates individual classroom activities that occur on a day-to-day basis.
- ❖ Microteaching is often used to help novice and trainee teachers practice and hone their teaching skills. The focus on a single skill or concept allied to the smaller number of students allows for concentration on a specific type of teaching delivery. The more confined environment also aids a video recording of the teacher's practice and/or monitoring by in-class assessors.
- ❖ Microteaching is often used to help novice and trainee teachers practice and hone their teaching skills. The focus on a single skill or concept allied to the smaller number of students allows for concentration on a specific type of teaching delivery. The more confined environment also aids a video recording of the teacher's practice and/or monitoring by in-class assessors.
- ❖ It often features the teaching of a single skill or concept, with the smaller group enabling the teacher to give individual attention to each student, helping them master the skill of concept.
- ❖ Micro teaching often features kinetic learning, with students learning from "hands-on" experience, and a more interactive environment with students able to ask questions of the teacher.

The focus is primarily on lesson planning or a small section of a lesson/chapter, focused mainly on developing teaching skills and receiving instantaneous feedback from an observer teacher and/or students.

MACRO-TEACHING

- ❖ Macro teaching occurs when a teacher provides instruction to the entire class at one time for an extended period of time, usually longer than 10 minutes.
 - ❖ Macro teaching is often done in lecture format and may be used to introduce a new concept, such as adding or to practice a new skill, such as sounding out new words.
 - ❖ Another component of macro teaching occurs when a teacher is developing lesson plans.
 - ❖ Macro lesson planning involves mapping out the bare bones of the entire school year with regard to what material — such as long division or spelling concepts — will be taught over the span of the school year.
 - ❖ Macro teaching allows a teacher to introduce new information to everyone at once.
 - ❖ Macro teaching can give a teacher an idea of what subjects or concepts she needs to spend more time on, as well who in her class needs additional help.
 - ❖ Planning lessons at the macro level help a teacher stay on track so she's able to meet her goals and cover the entire curriculum before the school year ends.
 - ❖ Macro teaching relies on auditory learning and recall.
- The focus is primarily on the long-term completion of syllabus and lesson planning, which allows a teacher to preempt any obstacles and overcome them for lesson delivery and relevant evaluation tests.

2.6.1 Differences between Micro & Mini teaching

S.No	Micro teaching	Mini teaching
1.	It has re teach lesson	No re-teach session
2.	Each time only few teaching skills are concentrated upon	It aims at gradual integration of teaching skills and to fit mini lessons into a real teaching program
3	Objectives are specified in behavioral terms	Objectives are general and not specified in behavioral terms
4	Class consists of small group of 5 - 10 students	Class consists 40 - 60 students.
5	The teacher takes up one skill at a time	The teacher practices several skills at a time
6	Duration time for teaching is 5 - 10 minutes	Duration time for teaching is 40 - 50 minutes
7	There is immediate feedback	Immediate feedback is not available
8	Teaching is carried on under controlled situation	There is no control over situation
9	Teaching is relatively simple	Teaching become complex
10	The role of supervisor is specific and well defined to improve teaching	The role of the supervisor is vague
11	Patterns of class room interaction can be studied objectively	Patterns of class room interactions cannot be studied objectively
12	Provision for re-teaching	No
13	Trainee teachers gain confidence in teaching	Fear and scared

2.7 UNDERSTANDING MAJOR TEACHING SKILLS

Micro teaching cycle:

The plan, feedback, replan, reteach and refeed back constitute a single micro teaching cycle. This cycle may be repeated till the selected skill is mastered. Like the one by one teaching skill is mastered.

LINK PRACTICE (INTEGRATION OF TEACHING SKILLS)

In microteaching technique, teaching skills are practiced one by one separately. At a time only one skill can be taught. While practicing one skill, the use of the particular skill is maximized and other related skill may also occur talking indirect role. Skill practiced in isolation has no meaning unless they are integrated in teaching. Hence, after attaining mastery in various skills mastered already. So a separate training programme is necessary for this purpose. This programme is called link practice.

Link practice involves the integration of skills. The main objectives of integration of teaching skills are to help in the transition from microteaching situation to real teaching situation where the trainee teacher is allowed to teach all the skills together learnt in microteaching sessions.

The link practice may be defined as a process of selection, organization and utilization of different teaching skills to form an effective pattern for realizing the specified instructional objectives in a given teaching learning situation.

'LINK PRACTISE'

Link practice is link between micro teaching and full class teaching where micro teaching skills are effectively integrated and transferred.

This is big contrast between microteaching and full class teaching. In micro teaching there is scaled down process in terms of class room size, scope of the lesson, time etc. micro teaching is practiced under stimulated condition. In micro teaching in addition to the existence of macro elements there also class room management problems. In link practice the student teacher are given chance of teaching real pupils.

Link practice session is arranged with about 20 pupils for about half the normal class period i.e. 20 minutes. The student teacher prepares a series of eight short lessons on a single unit particular to the content. The number of lesson used in link practice is flexible but selected topic should be adequately covered. The teaching skills namely 'set induction' and closure cannot be practiced in micro teaching lesson in isolation. So in link practice the student teacher include these skills also. At the end of the each lesson, the student teacher should get the feedback about the lesson.

Micro teaching skills

The Australian advisory committee on Research and Development into 140 skills. Allen and Ryan of the Stanford University has suggested the following fourteen skills representative of general teaching skills.

1. Stimulus variation.
2. Set induction.
3. Closure.
4. Silence and non-verbal clues.
5. Reinforcement of student participation.
6. Fluency in asking participation.
7. Probing questioning.
8. High order questioning.
9. Divergent questions.
10. Recognizing attending behavior.
11. Illustrations and use of examples.
12. Lecturing.
13. Planned repetition.
14. Completeness of communication.

Although practicing every skills in micro-teaching is very important and necessary, the student teacher may practice few selected skills. These skills are

1. Reinforcement.
2. Explaining.
3. Probing questioning.
4. Stimulus variation.
5. Illustration with examples.
6. Link practice.

Observation procedure

In micro teaching session student teacher organize themselves into group. Each group may consist of about 5 to 7 student teachers. Each one teacher for about 5 minutes and one member enters in coding sheet the occurrence of the components of the particular skill in every half a minute. He is helped by another member to tell him the time. The remaining number of the group act as student. Every member in the group gets the opportunity to act as a micro teacher, coder, timekeeper, and student once. The interpretation is made on basis of the coding sheet marked by the coder.

2.7.1 Skill of Introduction

The main purpose of the introducing skills is to establish cognitive report between students and teacher to obtain immediate involvement in the lesson.

- A specific technique of introducing a lesson is the use of analogies that have characteristics similar to the concept, principle or central theme of the lesson. While beginning the lesson the preserver teacher should Gain student attention Build motivation Explain why the lesson is important. Introduction of the lesson is usually short. Some simple techniques of introducing a lesson are
- ❖ Telling a story connected with the lesson.
 - ❖ Referring to something related to the experience of students in their area of activity interest or knowledge.
 - ❖ Linking the present lesson to the previous lesson or to future learning

Components of the Skill

- ❖ Preliminary Attention Gaining
- ❖ Use of previous knowledge
- ❖ Use of appropriate device
- ❖ Link with new topic

OBSERVATION SCHEDULE

Name of pupil teacher:

Date:

Name of supervisor:

Class:

Subject:

Time:

Topic:

Teach/Reteach

Instructions: Grade the performance and indicate it by encircling the letter.

Legend:

- "A" means 95 to 100 per cent correct use of component.
 "B" means 85 to 94 per cent correct use of component.
 "C" means 75 to 84 per cent correct use of component.
 "D" means 65 to 74 per cent correct use of component.
 "F" means below 65 per cent correct use of component.

S.No.	Components	Grading	Remarks
1	Preliminary Attention Gaining	A,B,C,D,F	
2	Use of previous knowledge	A,B,C,D,F	
3	Use of appropriate device	A,B,C,D,F	
4	Link with new topic	A,B,C,D,F	

2.7.2 Skill of Explaining Introduction

Introduction

You must have experienced that during the teaching-learning process of some concepts, principles and phenomena, mere description of theme does not make them understandable to the pupils. The teacher has to give proper explanation and reasons to bring clarity and proper understanding of what is being taught.

Components of the Skill

- ❖ Beginning statement;
- ❖ Explaining links;
- ❖ Concluding statement;
- ❖ Questions to test pupils' understanding;

Don'ts

- ❖ Irrelevant statement,
- ❖ Lacking in continuity,
- ❖ Vague words and phrases.

Beginning Statement:

The purpose of this statement is to create readiness among the pupils to pay attention to the point being explained. It is the introductory statement to begin explanation.

Explaining Links:

These are words and phrases which are mostly conjunctions and prepositions and are generally used by the teachers to make his explanation effective. These are

the result of	the cause of	such that
the consequence of	the function of	hereafter
due to	so that	as a result of
this is how	therefore	before
in order to	hence	after
Since	but	thus
because	the purpose of	next

Concluding Statement:

This is the statement made at the end of the explanation. It includes the summary of all the main results of the explanation.

Questions to Test Pupils' Understanding:

These are short questions put to the pupils to test their understanding of the concept after the explanation. The main purpose is simply to judge whether the pupils have understood or not.

Irrelevant Statements:

These are statements sometimes made by the teacher during explanation which have nothing to do with the present concept. These statements do not contribute to understanding rather create confusion in the minds of the students.

Lacking in Continuity:

It happens when the sentences remain incomplete or are reformulated in the middle of the statement and there are other causes also like:

- ❖ A statement is not logically related to the previous statement.
- ❖ When a topic of previously taught content is referred without showing the relationship to what is being explained.
- ❖ When there is no sequence of space or place.
- ❖ Use of inappropriate vocabulary of technical terms which are quite unknown to pupils.
- ❖ Use of vague words and phrases.

In addition to these words there are words and phrases like "you see", "Okay", "correct" etc. which are parts of teachers' mannerism.

Now you have understood this skill and its components very clearly. Let us demonstrate them with the following micro-lesson plan.

OBSERVATION SCHEDULE

Name of pupil teacher: _____ Date: _____
 Name of supervisor: _____ Class: _____
 Subject: _____ Time: _____
 Topic: _____ Teach/Reteach
 Instructions: Grade the performance and indicate it by encircling the letter.

Legend:

- "A" means 95 to 100 per cent correct use of component.
- "B" means 85 to 94 per cent correct use of component.
- "C" means 75 to 84 per cent correct use of component.
- "D" means 65 to 74 per cent correct use of component.
- "F" means below 65 per cent correct use of component.

S.No.	Components	Grading	Remarks
1	Beginning statement	A,B,C,D,F	
2	Explaining links	A,B,C,D,F	
3	Concluding statement	A,B,C,D,F	
4	Questions to test pupils' understanding	A,B,C,D,F	
5	Questions followed by correct responses	A,B,C,D,F	
6	No irrelevant statement	A,B,C,D,F	
7	No lacking in continuity	A,B,C,D,F	
8	No inappropriate vocabulary	A,B,C,D,F	
9	No lacking in fluency	A,B,C,D,F	
10	No vague words and phrases	A,B,C,D,F	

2.7.3 Skill of Reinforcement**Definition**

Reinforcement is a form taken from the psychology of learning. The form implies the use of the technique for influencing behavior of individuals in the desired direction. The concept of reinforcement is based on the hedonistic principle which envisages that an individual tends to repeat the pleasant experiences and avoid the unpleasant ones. Reinforcement therefore constitutes one of the essential conditions of learning.

Reinforces

The stimuli that provide the contribute to the pleasant experiences are called positive reinforcers, while the stimuli providing unpleasant experiences can be termed as negative reinforcers. By and large, positive reinforcers are used for strengthening the responses or behavior individuals and negative

reinforcement of weakening or eliminating the undesirable responses. Following the media through the reinforcers are used, we can classify them as:

Skill of components:

(A) Positive verbal reinforcers (PVR):

In the form of using praise words such as 'good', 'very good', 'excellent', 'fantastic', 'splendid', 'right', 'yes', 'correct', 'fine', 'continue', go ahead, etc. and the teachers' verbal behavior accepting student feelings, repeating and rephrasing student responses, summarizing student ideas etc. fall in this category of positive verbal reinforcers.

(B) Positive non-verbal Reinforcers (PNVR):

Positive non-verbal reinforcers includes teacher's gestures covering pleasant feeling or approval of student responses. Smiling, nodding of head, delight laugh, clapping, keeping eyes on responding students, and giving ear of the student indicating the attention is being paid him.

(C) Negative verbal Reinforcers (NVR):

Teacher's behavior corresponding to negative verbal reinforcers can be classified as the use of discouraging words like 'wrong', 'incorrect', 'stop it', 'you don't know even this'. Teacher statements such as 'do not like what you are doing', 'do not like this', 'that is not good', are also covered under the category.

(D) Negative nonverbal reinforcers (NNVR):

Sometimes a teacher makes use of the nonverbal use of expression to indicate the disapproval use of the student's inappropriate behavior or incorrect response to the question. The nonverbal negative reinforcers can be frowning, raising the eyebrow, hare and disapproving stares.

The first two component teaching behaviours comprising the skill of reinforcement are desirable ones. As such, the frequency of their used to increased. The use of the last two components behavior is to be avoided as far as possible. In most of the cases, negative reinforcement affect students learning adversely it withdraws them from classroom participation.

Here the teaching episode given below illustrate the use of positive verbal reinforcers, positive non-verbal reinforcers, negative verbal reinforcers and negative non-verbal reinforcers.

OBSERVATION SCHEDULE

Name of pupil teacher:
Name of supervisor:

Subject:

Topic:

Date:
Class:
Time:
Teach/Reteach

Instructions: Grade the performance and indicate it by encircling the letter.

Legend:

"A" means 95 to 100 per cent correct use of component.

"B" means 85 to 94 per cent correct use of component.

"C" means 75 to 84 per cent correct use of component.

"D" means 65 to 74 per cent correct use of component.

"F" means below 65 per cent correct use of component.

S.No.	Components	Grading	Remarks
1	Positive Verbal reinforcers	A,B,C,D,F	
2	Repeating and Rephrasing	A,B,C,D,F	
3	Extra Verbal Cues	A,B,C,D,F	
4	Positive Non-verbal Cues	A,B,C,D,F	
5	Writing pupils' answer on Black Board	A,B,C,D,F	
6	Negative verbal Reinforcement	A,B,C,D,F	
7	Negative Reinforcement Non-verbal	A,B,C,D,F	
8	Wrong use of Reinforcement	A,B,C,D,F	
9	Inappropriate Reinforcement use of	A,B,C,D,F	

2.7.4 Skill of Illustrating with Examples

You must have observed that some abstract ideas or concepts are very difficult to teach. In spite of their best efforts of explaining the concepts, the teachers are unable to convey the true sense and meaning of the concepts. This difficulty of the teacher can be solved easily if they are able to master the skill of illustrating with examples.

Components of Skill

1. Formulating Simple Example.
2. Formulating Relevant Example.
3. Formulating Interesting Example.
4. Using Appropriate Media for Example.
5. Using Examples by Inducto-Deductive Approach.

Formulating Simple Example: A simple example is one which is related to the previous knowledge of pupils. It should be according to the age level, grade level and the background of pupils.

Formulating Relevant Example: An example is relevant to the concept, when the concept or the rule can be applied to it. This means to say that the rule is explained by the example.

Formulating Interesting Example: An example is interesting if it can arouse curiosity and interest of pupils. This can be judged by the attending behavior of students. If the pupils keenly attend to the example, it is really interesting.

Using Appropriate Media for Examples: Appropriateness of media refers to its suitability to age level, grade level, and maturity and to the unit taught. The decision about the nature of media, whether verbal or non-verbal depends on the nature of concept.

Using Examples by Inducto-Deductive Approach: This involves the teacher giving examples relating to the concept or rule to clarify it. The pupils on the basis of the examples given, formulate the rule. After this the teacher asks the pupils to give examples to test whether the pupils have rightly understood the concept or not.

8	Example to test pupils' understanding were adequate	A,B,C,D,F	
9	Pupils have clearly understood the concept	A,B,C,D,F	

2.7.5 Skill of Questioning

The strategy of asking questions is direct to elicit responses from the students. Responses, such as no responses, wrong response, partially correct response, incomplete response or correct response. The skill of probing questioning is going deep into student responses through step by step questioning with the view of eliciting the criterion reaps ones. Let us consider various response situations one by one.

1. No response situation:

Refers to the failure in the part of the student of frame and express verbally responses to the question that he is required to the answer. This may be due to student's inability to understand question, to structure response or due to the lack of requisite facts, concepts, generalization needed for the purpose of responding or the failure to recall the related facts.

2. Wrong response Situation:

In correctness of the student responses is to be considered in the context of specific levels of the classroom questions. Wrong responses to question indicate the lack of knowledge of facts, concepts and generalization on the part of the student.

3. Partially correct response situation:

Represent the response situation parts which are similar to the criterion or correct responses. They represent a partial knowledge of facts, concepts and generalization on the part of the student.

4. Incomplete response situation:

When no response situation occurs, we infer that either the student is not having necessary facts, concepts or generalization in his memory or it may be due to his inability to understand and structure response to the question.

5. Correct response situation:

Refers to the statement expressed by the student which completely satisfy the criterion response.

4	Incomplete response situation	A,B,C,D,F	
5	Correct response situation	A,B,C,D,F	

2.7.6 Skill of Probing Questioning Components

You have studied the various student response situations. These specific set of behavior are outlined in ensuring action on skill components. The skill of probing questioning is comprised in component behavior of seeking further information, regarding, refocusing and developing critical awareness. These components are discussed in this section.

a) Seeking further information (SFI):

To deal with incomplete response situation and partially correct response situation, it consists of eliciting additional

information from the responding the pupil to bring the initial response to the expected response level. "What else" "type of question seek further."

b) Refocusing (RF):

To deal with the "to deal with the correct response situation" the teacher refocusing pupil responses and wants the pupil to relate it to come area learnt or requires the pupil to consider the implication of the given response in more complex and novel situations.

c) Redirecting (RD):

For more students involvement to deal with "no response", "incomplete response" and 'partially correct', the same question is redirected to more students for responses.

d) Developing critical awareness (DCA):

To deal with the correct response situation. This involving asking 'why' and 'how' the correct response. The teacher expects the pupil to justify his response of bring one its ration are. This process develops his critical awareness.

2	Refocusing(RF)	A,B,C,D,F	
3	Redirecting (RD)	A,B,C,D,F	
4	Developing critical awareness (DCA)	A,B,C,D,F	

2.7.7 Skill of Stimulus Variation

Learning is influenced by different types of stimuli. These stimuli may help the process of learning and sometimes bring the unwanted effect. So, for effective learning the teacher the teacher provide the relevant and necessary stimuli. He has to focus the attention of the students towards teaching. The student should not respond to the stimuli which do not promote learning. So the teacher should have a very clear idea about the relevant and irrelevant stimuli. At that same time care should be taken so that the same stimuli should not be provided continuously. Because this may result in monotony and bring fatigues.

The problem of inattention is a challenge to the teacher. So the teacher should practice the skill namely 'stimulus variation' variation in voice, change position, students activity etc., will definitely bring favorable classroom interaction, break monotony and sustain interest.

A set of behaviours of the teacher that help to sustain the interest of the students in the process of teaching-learning process constitute the skill "stimulus variation".

Components of stimulus variation:

1. Teacher Gesture(TG):

Gesture is non-verbal cues to express an idea of feeling. These may indicate shapes, size, position, movement etc. gestures include the bodily movements like eye moments the head, hand movements, facial expression, etc.

2. Teacher movement(TM):

This is an important behavior. The teacher may move from table to black board to table, to students place etc. these movements make the class alert interesting.

3. Change of sensory focus(CSF):

The attention of the student is quite often focused towards different stimuli namely blackboard, teaching aids, teachers notebook etc., to catch the attention of the students. Focusing may be done, using the words like 'look here', 'listen', 'all of you watch', 'observe carefully' etc., may be gestures like pointing to specimens, tables, chart, black board etc.,

4. Change in speech pattern (CSP):

The voice of the teacher has great influence. The voice should be appropriate. There should be change in pitch, tone and speed.

This change will break the monotony, sudden change in pitch or tone will attract the attention of the students.

5. Pupil movement (PM):

Physical involvement of pupils always creates interest and so attracts the attention. Pupils may move from their place with the purpose that facilitates learning. Pupil may demonstrate, handle apparatus, point out the required parts in the models/specimens, write/drawn on the black board etc.

6. Pupil talk (PT):

Teaching is an interaction. It is an effective communication. Only when pupil responds to the teacher the learning is assured. The pupil may answer the teacher or the pupil may initiate the talk.

3	Change of sensory focus(CSF)	A,B,C,D,E	
4	Change in speech pattern (CSP)	A,B,C,D,E	
5	Pupil movement (PM)	A,B,C,D,E	
6	Pupil talk (PT)	A,B,C,D,E	

2.7.8 Skill of Achieving Closure

'Achieving Closure' is similar to a stage known as 'recapitulation' in the Herbartian Steps, according to which it is a

process of associating new facts with the old knowledge, applying new knowledge in various situations, and ensuring repetition of the facts in the best possible way. It is generally necessary to use this skill at convenient points during the lesson for definite summing up and revision of the meaningful facts taught. This may be termed as 'sectional recapitulation'.

Khan (1985) concluded that student-teachers treated with the technique of skill-based micro teaching were found to be more effective in General Teaching Competency than those trained in the traditional method of teaching.

Components of the Skill

Consolidation of Major Points (CMP)

This involves synthesizing the main points covered during the lesson into a meaningful whole. The teacher has consolidated the main points by putting a few questions to the pupils. So, it is mostly the questioning approach that has been used.

Providing opportunities for the pupils to apply the new knowledge to various situations: (OP)

This helps the teacher in locating gaps in the pupils' understanding. This involves mostly testing situations where both the teacher and the pupils receive feedback immediately about their performance.

Linking previous knowledge to new knowledge and new knowledge to future knowledge of the students (LK)

Past knowledge of the pupils includes the knowledge of the pupils which they had acquired before presenting the lesson in hand and it helps the pupils to see the relationship between them.

Home Work or Assignment (HW)

The term 'future learning' refers to the home-task or assignment given to the pupils after present knowledge has been taught during the lesson. If linking has to be brought about between the present knowledge and the future learning, the assignment should be appropriate.

3	Linking previous knowledge to new knowledge and new knowledge to future knowledge of the students	A,B,C,D,E	
4	Home Work or Assignment	A,B,C,D,E	

2.7.9 Skill of Non-Verbal Cues

Non-verbal cues has been defined as communication without words. Although verbal output can be turned off, non-verbal can't. Teachers use non-verbal cues because

- ❖ Words have limitations. There are numerous areas where non-verbal communication is more effective than verbal.
- ❖ Non-verbal signs are powerful. Non-verbal cues primarily express inner feelings.
- ❖ Non-verbal messages are likely to be more genuine.
- ❖ Non-verbal signals can express feelings, thoughts etc.
- ❖ Complexity of the verbal message can be given through simple nonverbal signals.

Components of the skill

1. Body language
2. Proximity
3. Touch
4. Eye-contact
5. Chronemics
6. Smell
7. Vocalics

2.8. PRACTISING A LINK LESSON WITH MULTIPLE TEACHING SKILLS (for 20 minutes)

2.8.1 LINK LESSON

LINK LESSON

NAME :

DATE:

SUBJECT :

TIME: 15-20 mts

TOPIC :

Warehouse and Warehousing

FOCUS :

To understand the meaning, difference between warehouse and warehousing and Need for warehousing.

1. OBJECTIVES

- Explain the meaning of Warehouse.
- Define Warehousing.
- State the difference between warehouse and warehousing.
- Explain the needs of warehousing.
- Explain the functions of warehouses.

2. MATERIALS

i) Chart ii) Dummy model iii) Chalk board

3. CONTENT OUTLINE OR LESSON DESCRIPTION

Warehouse - meaning, difference between warehouses and warehousing, need of warehousing

4. TEACHING SKILL

Introducing, Explaining, Questioning, Reinforcement, stimulus-variation, Non-verbal cues, Closure.

5. INSTRUCTIONAL PROCEDURES AND ACTIVITIES

I) Introductory Activities (Motivation)

Teacher : Good Morning Students.

Student : Good Morning Mam.

Teacher : How are you all? (Arouse interest)

Student : Fine Mam.

Teacher : What do you mean by production?(Maximum utilization of previous Knowledge)

Student: Conversion of input into output Mam. (Correct response)

Teacher: Very Good., (Positive-verbal reinforcement)

Student: Ok, Mam

Teacher : Ok fine students. What do producers do when output is not in demand?(Increase critical awareness)

Student : Store it Mam. (Correct response)

Teacher : Very good. Where is it stored? (Positive-verbal reinforcement)

Student : Shops Mam.

Teacher : But we can store it in shops some quantity only, hence remaining goods? (Maintenance of continuity)

Student : Silence.

Teacher : It's ok students. That is called Warehouse.(Positive Non-verbal Reinforcement)

Student : Ok Mam.

Teacher : Good. Do you know about the warehouse? (Seeking further information)

Student: Goods from other country by ship they are stored in port Mam.

Teacher : Good, tell me anyone.... (Redirecting)

Student2: Crackers has been storing, away from the city Mam.

Teacher: Well students, Today I shall teach you about Warehousing (Topic declaration)

Student: Ok mam.

II. DEVELOPMENT ACTIVITIES (Presentation, Interaction, and Reflection)

Teacher: Let's see the introduction about Warehouse (Beginning statement)

Teacher: The term "Ware" means products or goods. "Warehousing" generally means storage place or godowns which is located near a factory to keep the raw materials and finished products.

Student: Ok Mam. (Students physical participation)

Teacher: Now, Warehouse means - It is a place where goods are stored for future use and act as distribution centres. Warehouses are designed depending upon the nature of the products to be stored. For example, to keep perishable items like fruits and vegetables, cold storages are required (Explaining Links)

Student: Ok Mam.

Teacher: According to J. Stephenson, "a warehouse in an establishment for the storage or accumulation of goods". (Teacher Movement & Gestures)

Student: Ok Mam.

Teacher: Warehousing means, it is an arrangement by which goods are stored when they are not needed immediately and are kept in such a manner so as to protect from damage or deterioration. (Gesture and facial expression)

Student: Mam, what is mean by deterioration? (Students physical participation)

Teacher: It means, decreasing quality. (Explaining links)

Teacher: Now, try to tell, difference between warehouse and warehousing. (Opportunity providing)

Student: Discussing (Student's physical participation)

Teacher: Try to tell some points (Pausing)

Student: Warehouse - storing purpose only Mam.

Teacher: Next one. (Teacher Movement & Gesture)

Student2: Don't know Mam.

Teacher: It's ok. Next one. (Positive Reinforcement & Redirecting)

Student 3: Warehousing is to preserve and protect the goods from damage.

Teacher: Very Good. (Positive Verbal Reinforcement)

Teacher: Now, we shall learn about need for warehousing

(a) Mass production

(b) Nature of commodities

(c) Seasonal production but regular consumption

(d) Regular production but seasonal consumption

(e) Proximity to production centers

Students, write down these points in your note (Eye contact)

Student: Ok Mam. (Students physical participation)

Teacher: Good. Mass production refers "The market for such goods is spread all over the country. Therefore, warehouses are to be built at different places to store these products and provide prompt supplies when demanded". (Explaining links)

Student: Ok Mam.

Teacher: Nature of commodities refers to some goods are perishable in nature so cold storages can extend the life of the goods. Buyers have variety of products and services available in the market. (Interact)

Student: Ok Mam.

Teacher: Any idea about Seasonal products. (Opportunity providing)

Student 1: Some fruits like watermelon Mam.

Teacher: Pausing. One by One. (Redirecting)

Student 2: Don't know Mam.

Teacher: It's ok dear. The farm products such as wheat, sugar, pulses, etc. are produced only in seasons. But the consumption of these products are evenly spread throughout the year. If proper storage facilities are not provided, the quality of these goods deteriorates and may become not usable. (Positive Non-verbal reinforcement & Explaining links)

Student : Ok Mam.

Teacher : This picture represents what type of Product? (Aural visual switching - Shows the picture)

Student : Seasonal product Mam. (Correct response)

Teacher : Very Good. This is the example for Regular production but seasonal consumption (Positive Verbal Reinforcement)

Student : Ok Mam.

Teacher : Last one, Proximity to production centers. Productions of goods at specific centers need to be supplied in time and without interruption to consumers throughout the country. For this purpose goods are regularly fed to the warehouses situated at different market areas. (Explaining links)

Student : Ok Mam.

III. CONCLUDING ACTIVITIES (Summing up/ Closer)

Teacher : Finally, we are going to conclude what we have seen in the class.

Student : Ok Mam.

Teacher : Tell me about Warehouse. (Refocusing)

Student : "Warehouse in an establishment for the storage or accumulation of goods", Mam.

Teacher : Very good. Difference between Warehouse and Warehousing. (Questions to test pupils understanding)

Student : Mam, Warehouse - Storage place only & Warehousing - Storage place and can as protect from damage (correct response)

Teacher : Very good. All of you clear about the meaning and Need for Warehousing. (Concluding statement)

Student : Yes Mam.

Teacher : Dear Students. Collect some data, of what type of goods stored in warehouse (Homework/Assignment)

Student : Ok mam.

Teacher : Thank you, students.

Student : Thank you, mam.

IV. EVALUATION AND ASSESSMENT

Distribute a copy of assessment format (skill and steps) to the per-service teacher (peer) for evaluation and assessment.

2.8.2 LINK LESSON

NAME : DATE:

SUBJECT : Commerce TIME: 15-20 mts

TOPIC : Retailing

FOCUS : To understand the meaning, types of retailing traders and forms of small scale large scale retailers

1. OBJECTIVES

- Explain the meaning of retailing.
- List out the types of retailers
- Explain the various forms of small scale and large scale retailers.

2. MATERIALS

- Chart
- Dummy model
- Flash card

3. CONTENT OUTLINE OR LESSON DESCRIPTION
Retailing - meaning, types of retailing traders and forms of small scale, large scale retailers

4. TEACHING SKILL

Introducing, Explaining, Questioning, Reinforcement, stimulus-variation, Non-verbal cues, Closure.

5. INSTRUCTIONAL PROCEDURES AND ACTIVITIES

1) Introductory Activities (Motivation)

Teacher : Good Morning Students

Student : Good morning Mam.

Teacher : How are you all? (Arouse interest)

Student : Fine Mam.

Teacher : Do you know what is retailing? Daily we are seeing and going to buy some. (Maximum utilization of previous knowledge)

Student : Shops Mam.

Teacher : Very Good. (Positive-verbal reinforcement)

Student : Ok, Mam

Teacher : Ok fine students. If you are going to buy one pen, which type of shops you choose? (Questions to test pupils understanding)

Student : Our home nearby shops Mam. (Correct response)

Teacher : Very good. That is called Retail shop. (Positive verbal reinforcement)

Student : Ok Mam.

Teacher : Good. Based on the size of the business, product mix, pricing and service level, and ownership of the business, it can be classified into few types. (Interaction)

Student : Yes Mam.

Teacher : Yes. Do you know, who is mobile traders? (Seeking further information)

Student1 : Selling Vegetables or fruits on a bicycle or bike.

Teacher : Very Good, tell me more.... (Positive-verbal reinforcement)

Teacher : Mobile traders deal in low price, daily usable items such as fruits, vegetables, fish, clothing, books.. (Gesture)

Student : Ok Mam.

Teacher : Good. The topic we are going to learn about the meaning, types of retail traders, and Forms of small & large scale retailers. (Topic declaration)

Student : Ok mam.

II. DEVELOPMENT ACTIVITIES (Presentation, Interaction, and Reflection)

Teacher : Let's see the meaning of retailing. (Beginning statement)

Teacher : Retailing is the process of selling the goods and services directly to the ultimate consumers in small quantities.

Student : Ok mam.

Teacher : Thank you, students.

Student : Thank you, mam.

IV. EVALUATION AND ASSESSMENT

Distribute a copy of assessment format (skill and steps) to the per-service teacher (peer) for evaluation and assessment.

2.9 INDIVIDUAL SKILLS MODEL EPISODE

2.9.1 Micro Teaching Episode for Skill of Introduction

NAME : DATE:

SUBJECT : Commerce TIME: 5-10

TOPIC : Barter system

FOCUS : Introduction about barter system

1. OBJECTIVES

2. MATERIALS

i) Chart ii) Dummy model iii) Flash card

3. CONTENT OUTLINE OR LESSON DESCRIPTION

Barter system

4. TEACHING SKILL

Skill of Introduction

5. INSTRUCTIONAL PROCEDURES AND ACTIVITIES

1) Introductory Activities (Motivation)

Teacher : Good Morning Students.

Student : Good Morning Mam.

Teacher : How are you all? (Arouse interest)

Student : Fine Mam

Teacher : Did you had your breakfast?

Student : Yes Mam.

Teacher : Fine, Lets we start the class. (Arouse interest)

Student : Yes Mam.

Teacher : Good... Now we are going for buying apple means. What we have to pay? (Maximum utilization of previous knowledge)

Students : Money.

II. DEVELOPMENT ACTIVITIES (Presentation, Interaction and Reflection)

Teacher : Very Good., Without paying money we able to buy any products?

Student : No Mam.

Teacher : Very Good., Yes without money we can't able to purchase. Before invention of money, how was the purchase is made? (Maintenance of continuity)

A barter system is an old method of exchange. This system has been used for centuries and long before money was invented. People exchanged services and goods for other services and goods in return. ... The value of bartering items can be negotiated with the other party.

IV. EVALUATION AND ASSESSMENT

Distribute a copy of assessment format (steps) to the per-service teacher (peer) for evaluation and assessment

2.9.2 Micro Teaching Episode for Skill of Explaining

NAME : DATE:

SUBJECT

: Commerce

TIME: 5-10 mts**TOPIC**

: Warehouse.

FOCUS

: To understand the meaning and types of warehouse.

1. OBJECTIVES

- Explain the meaning of warehouse and warehousing.
- List out the classification of warehouse.
- Differentiate warehouse and warehousing.

2. MATERIALS

- Chart
- Dummy model
- Flash card

3. CONTENT OUTLINE OR LESSON DESCRIPTION

Warehouse-meaning, types and differentiate between warehouse and warehousing.

4. TEACHING SKILL

Skill of Explaining

5. INSTRUCTIONAL PROCEDURES AND ACTIVITIES**I) Introductory Activities (Motivation)**

Teacher : Good Morning Students

Student : Good morning Mam.

Teacher : Today we are going to discuss about one interesting topic. (Beginning statement)

Student : OK mam.

Teacher : In your house where you can store grossery items? (Beginning statement)
