FOREWORD

Pedagogy of English - I is a book prepared under the New syllabus of Tnte University for B.Ed., Course. This book has been written on the basis of our experience of teaching English for the past ten years. So, the main aim of publishing this book is to make the students learn with ease, memorize and pass in the B.Ed., examination. Besides, it also gives an adequate knowledge about the methods of teaching English with a lot of examples. Though there are many books available on teaching English, this one is comprehensive enough to cover up the honours and caters only that much which is really required by the B.Ed., students.

In writing this methodology of Pedagogy of English, We have used numerous standard works ideas of different authors and website information. We indebted, more or less, to their authors in completing this study and feel very grateful to them all.

We thank our almighty god who helps in impossibilities.

Suggestion for improvement will be greatly appreciated.

Authors

PEDAGOGY OF ENGLISH - I

University Syllabus – 2021 - 2022 onwards

UNIT-I: AIMS AND OBJECTIVES OF TEACHING

Meaning, Nature, Scope, Need and Significance, Values, Aims and Objectives: Instructional objectives and Behavioural Objectives – Need and Importance of Instructional Objectives. Bloom's Taxonomy of Instructional Objectives: Cognitive, Affective and Psychomotor Domains, Revised Bloom's Taxonomy 2001 (Anderson & Krathwohl) Interrelation among the domains – Correlation between subjects.

UNIT-II: TEACHING SKILLS

Micro-Teaching : Concept, Definition, Steps, Cycle - Micro-teaching Vs Macro-Teaching - Skill of Set Induction - Skill of Explaining , Skill of Questioning , Probing skills, Skill of Stimulus Variation, Skill of Reinforcement, Skill of non-verbal clues, Skill of Closure - Link lesson – Model episode.

UNIT - III: APPROACHES OF TEACHING ENGLISH

Approaches of Lesson Planning - Steps - Organizing Teaching: Memory Level (Herbartian Model), Understanding Level (Morrison teaching Model), Reflective Level (Bigge and Hunt Teaching Model) – Unit Plan – Lesson Plan Writing.

UNIT - IV: METHODS OF TEACHING

Teacher-centred Instruction: Lecture method, Demonstration and Team teaching – Learner-centred Instruction: Self-learning, Forms of Self-Learning: Programmed Instruction, Computer Assisted Instruction, Keller Plan, Project Method, Activity Based Learning (ABL), Active Learning Method (ALM)-Mind Map and Advanced Active Learning Method (AALM).

INSTRUCTIONAL MEDIA

of Instructional Media in English – Use of Mass
Classroom Instruction. New Emerging Media: Tele-
vision, Communication Satellites, Computer Networking,
Web 2.0, Blended Learning, Flipped Classroom,
Artificial Intelligence and Augmented Reality.

UNIT - 1

AIMS AND OBJECTIVES OF TEACHING ENGLISH

1.1 English : Meaning

Language is a system of communication by speaking, writing, or making signs in a way that can be understood, or any of the different systems of communication used in particular regions. Language is an essential element in the culture of any society. We live in a community and our living in a community is made meaningful mainly by the language.

"Community is formed by the activity of language, and speech utterances give us the most direct insight into its working". Leonard Bloomfield

The practice and theory of learning and teaching English for the benefit of people whose first language is not English. In India English is taught as a Second Language. "Language shapes the way we think and determines what we can think about" said Benjamin Lee Whorf.

1.2 Nature of English

The English language has a complex status today's world. It is acquired as a first language. For some, it is learned at school, and be essential for academic and professional success. For some, it may arouse positive feelings-as the language of pop culture, the media and social networking...

English today has a unique status, as a consequence of the role it plays around the world and its function as an

'international' or 'world language'. It has been described as the world's lingua franca.

English learned for many different reasons. It may be an essential tool for education and Business for some learners; it may be the language of travel and related activities of sightseeing for Others; and it may be needed for social survival and employment for new immigrants in English-speaking countries. For some, it may be a popular language for the media entertainment, the internet and other forms of electronic communication. For many, however, it may be merely be a language that they are obliged to study which they don't need at all.

English be become the ladder for social mobility. The ever-increasing demand is such that we see coaching centres and English medium schools in all parts of our country. Though the language was a gift of the British, it has stayed with us till date. Indians hold the language in high regard, and its position in our mind is respectable. It has firm roots in all offices, professions, societies and social economic and even political structure.

We hold English has pre-requisite not only for economic growth but also for social value. Professor Timothy J. Scrase, "English is not only important in getting better job, it is everywhere in social interaction. If you can't speak it, you are a nobody".

1.3 Scope of English

In recent years, there has been a dramatic change in the scope of English language teaching worldwide and an increasing demand for competent English language teachers, as well as for language programs that can deliver the English language skills and competencies needed by

today's global citizens. The teaching of English consumes a considerable portion of available educational resources and offering equal opportunities for all.

There various scope in learning English language. Some of them are:

Globalization

The spread of English is often linked to globalization, since it provides for high levels of inter connectedness among nation states and local economics and cultures. It has become the primary language for communication within international organizations.

Economic development

Many countries see English as an important language for their economic development as it is the key to innovations and competitiveness.

Communication

English is taught widely and used around the world and it is a convenient language across National boundaries and also for professions.

Business and Entrepreneurship

Today large business organizations are increasingly multinational in their operation, and require Knowledge of English in order to enter the workforce in their countries and in order to advance Professionally. Besides many IT graduates in developing countries require English knowledge for providing a chance to market their expertise outside. Their fluency in English, together with theirs creative and innovative thinking, is a part of the driving force of thousand of successful businesses and companies worldwide.

Education

It plays a major role in the Education system particularly in the developing countries like India. It has become the medium of instructions in many schools and colleges. The contribution of English in various professional fields enlarge the growth of knowledge in Medicine, Science and technology and so on.

Travel

Today's citizen is often mobile, either moving to a new location for tourism or to seek Employment. The development of tourism within a country is often dependent upon providing resources in English for visitors, and international travelers' generally find that they need some knowledge of English in order to travel abroad.

Popular Culture

English today is an important language for expression of western popular culture. It is visible in Sports, in advertising and in packaging and labelling of consumer items, particularly those aimed at younger buyers.

Conclusion

English has accrued a value and status that transcends its role as a communicative resource. It is seen as a symbol of globalization, modernization, technical innovation and progress. Be it a science, commerce, business, tourism, politics, media, internet, google, computers or any other area of work or study, English is a must. Therefore, Educational planners believe that English should have a significant role in a national curriculum, because not to do so would be to opt out of contemporary views of progressivism.

1.4 Need and Significance

English speakers are likely to number in billions. English crosses cultures and countries. It is often used as 'Common tongue' if neither person is a native speaker. This means teaching people English can be truly rewarding. Students to English have many new opportunities and doors open to them thanks to their skills.

1. The internet is in English

About half of home pages on the internet are in English. The English edition of Wikipedia contains the most articles. If you want full use of the web, English is key, Internet use is now an important and necessary part of many jobs. Helping people learn English means helping them take full advantage of the power of web. Using Face book, Twitter and Instagram will tell what is going on around us. Now you can teach English online easily.

2. English can take you to amazing places

As well as opening up exciting new avenues for students, being able to teach English can offer language teacher new opportunities with TESOL or TEFL qualification, teachers can travel for and wide sharing their knowledge and exploring new corners of the globe with places like UAE, Saudi Arabia and China offering high salaries as well as new cultures. So learning English is important for socializing and entertainment on work.

3. English Teaching is a growing industry

By learning the skills to teach English, you could be setting yourself up for a well paid career with strong job security.

4. English is the language of science and technology

English is the language of science, of aviation, computers diplomacy and tourism. Knowing English increases your chances of getting a good job with in your country or for finding work abroad. It is also the language of international communication, the media etc. So learning English is important for socializing. It is rich in literature scientific and technical nature.

5. English is the language of international communication

English is the official language of 53 countries and spoken by around 400 million people across the globe. It is the most common second language in the World. If you want to speak to someone from another country, then the chances are that you will both be speaking English to do this. Learning English is important as it enables you to communicate easily with your fellow global citizens.

6. English is the language of Business

English is the dominant business language and it has become almost a necessity for people to speak English if they are to enter a global business. Business Communication is almost done in English all over the world and many international companies expected their employees to be fluent in English. Learning English really can change your life.

7. English gives you Access to a world of entertainment

Many of the World's top films, books and music are produced in English. Therefore by learning English, you will

have access to a great wealth of entertainment and will be able to have a greater culture understanding. If you speak English, you will enjoy films, songs and TV shows. Watching movies and television programmes in the English language is also a easy way to learn it.

8. Importance of English in India

The benefits of learning English can be seen in economic, social and political life of the people of the country. India has taken the gigantic task of rapidly developing its economy and becoming a powerful country. To fulfill this, people must have the up-to-date English knowledge. It helps to contact with western science and technology. It occupies an important place in school curriculum.

1.5 Values of English

English is the most widespread language in the world and it occupies an important place in India today. There is no reason to underestimate the importance of English. According to Rajagopalachari "English language is the gift of Goddess Saraswathi to India". There are certain factors that determine the purpose of learning English in our country. They are:

1. English - A Window on the World

English is considered to be a window on the modern world. It helps us to know the progress being made by people of different nations of the world in the different areas of life. It is the language which is rich in scientific and technical development. If under sentimental urges if we give up English, then we would cut ourselves off from the living stream of ever-growing knowledge in all the fields and we would be isolated from the world. We will act unwisely if we allow ourselves to be enveloped in the folds of a dark curtain of ignorance.

2. A Link Language

English has served and is serving as a link language at two important levels. First, English is responsible for our contacts with the outside world. As Prof. Kumar says, as a link with the west, English is bound to retain an important place. Hence we shall have to depend on English for international business and politics and mainly for contact with the western thought and culture. Secondly, The census of India (1971) revealed that 380 languages or dialects are spoken in India. These can be grouped in 14 languages (given in the schedule VIII of the Indian Constitution). English is the only language which is known to the educated people all over the country. Therefore, for having inter-state links on the following like the Trade, Administration and Management, Social affairs, Cultural and Educational exchanges, we need the knowledge of English. In the absence of English each state would become a watertight compartment.

3. An International Language

English is the most widespread language in the world. It is the second language of the next to the Chinese language. It is difficult to estimate exactly how many English speakers there are, but according to one estimate there are more than 350,000,000 native English speakers and more than 400,000,000 speakers of English as a Second language or foreign language. Much of the information, country disseminate about themselves outside of their borders, is in English. It is spoken in large hotels and tourist attractions, at airports and in shops were the tourist visit. Travel brochures are printed in English and in some countries the drivers of buses or streetcars and sellers at newsstands speak English well. In this way, it has got international importance.

4. An Enrichment of Regional Languages

English literature is a treasure of rare ideas and high thinking. The translation of this literature from English to other regional languages will surely enrich these languages. For translating standard works, from English to other regional languages, a good knowledge of English language is required. Similarly, if one wants to translate standard work of our Indian languages into English, he definitely needs the adequate knowledge of English. So, English helps us through translations of good work.

5. A Language of Social and Cultural Importance

In India speaking English is a social prestige. The free exchange of English language among people lays the foundation for society and social groupings. Powerful speakers and writers have stirred the feelings of their audiences. Effective teachers have earned the lasting goodwill of their students and the community at large. English language enriches individuals and society enriches language. Besides English language helps to develop stability in our lives and this helps us to acquire the cultural values.

6. A Library Language

The Education Commission (1964-66), headed by Dr. G.S. Kothari, stressed the need for studying English as a compulsory subject to acquire at least a 'working knowledge' of English for communication and understanding in view of its growing importance. The Commission also said, "English as an important library language would play vital role in higher education. No student should be considered as qualified for a degree, in particular, a Master's degree unless he has acquired a reasonable proficiency in English".

Besides about 60% of the books are published in the world is in English. It is the most useful library language to be used by the students of professional and Post Graduate courses to collect information from books published in English. Thus, it is a decided fact that English is an important library language in our country.

7. A Language of Opportunities

Today a person with knowledge of English and who is rich in his communication skill has good chances of employment everywhere in the world. Many Multi-national companies like the Call centre, Medical Script Transcription, DATA transfer centres, Digital publishing houses and Human Resource Personnel Departments require dynamic young persons with oral and written communication skills in English. Not only that, a lot of information are hosted in various websites in English which provides job opportunities and even interviews are conducted in English through web cams.

8. Lingua franca of the World

In India English is used as the lingua franca. It is a shared language of communication used by the people who are speakers of different languages. It is the language through which we can exchange our views with the people of other countries. Lingua itself means tongue. In these days, every country needs other countries help in political, social, economic and cultural matters. There comes English as a rescue. This prompted U.K. Gatak to say:

"It would be rash to cut ourselves off from the English language which peaks us in continuous contacts with the latest thought in Europe, in every field of life and culture."

Thus, the role of English in India today is vitally significant and has a great influence in all the spheres of life in our country.

1.6 AIMS AND OBJECTIVES OF TEACHING ENGLISH

AIMS

To teach any subject, it is the primary fact to know the teachers and students, what is the purpose of teaching and what are the uses of teaching. We use the term 'aims' to mean the broad goals which our educational system (the whole of the Indian society involved) embraces and which we are expected to attain. The aims of education are based on philosophical and socio-psychological aspects of society and culture. Aims are long term goals.

1. CULTURAL AIMS

English helps to bring diverse culture to come closer. It helps inter-cultural understanding inside and outside our country. In fact English helps to build new cultural tradition and modernization of Indian society. Study of culture dispelled ignorance and superstition from the minds of the people. English is a great important vehicle of our thought and activity in the prevailing modern scientific culture. It is said that language itself is an embodiment of culture. Our Educationists like Dr.S.Radhakrishnan, Rabindranath Tagore, Swami Vivekananda, and Mahatma Gandhi spread our Indian culture through the world in English.

Rabindranath Tagore- He spread India's spirituality

Mahatma Gandhi- He spread the principles of truth and non-violence

Swami Vivekananda-He spread our Hindu religion

2. LITERARY AIMS

There is a general view that language should have its own literature. English language has a vast treasure of literature. In English, the pupils are able to appreciate poems, plays, novels, stories, essays, biographies, dramas, literary criticism and so on. We see that maximum knowledge can be imparted for the student's achievement. Prof. Gokul says, "It was in English classroom that the Indian literary renaissance was born". Besides the various writers and master-minds like Shakespeare, John Milton, Bernard Shaw, Ruskin, Tolstoy etc. have contributed a lot for this literature.

Hence literary aim is an important one in the teaching-learning process of English as a foreign language.

3. UTILITARIAN AIMS

English is the language of great utility. It is used throughout the world. In India, about 200 thousand people's mother tongue is English. They are known as Anglo-Indians. In Sikkim, English is an official language. Mr. M.C. Chayla, the chief justice of Bombay High Court considered English as one of the Indian language. The Sahitya Academy of India recognises English as one of the Indian language. Even our former prime minister, Pandit Jawaharlal Nehru wanted to include English in the 8th schedule of the constitution. So we see that English has become a versatile in use. It has obtained worldwide popularity and has many hands for one to hold and progress towards fortunes. Thus the Utilitarian aim of English teaching has its own importance.

4. LINGUISTIC AIMS

Linguistics is the study about the language itself. The nature structure, origin and grammar are to be mastered. It also helps them to do research work in this field. Here the teacher of English is to train the student's hearing, speaking, reading and writing abilities. Not only that, Phonetics is the fundamental study of linguistics where it mainly deals with the production of speech sounds. Therefore, the linguistic aim of teaching involves in the improvement of language elements.

5. INTEGRATIVE AIMS

India is a multilingual country and so English plays a vital role in unifying our people of different sects. Though Hindi is our national language yet it has various opposition especially in some states like Tamilnadu, where Hindi is not accepted as a link language. So English language only brings greater number of people in close contacts with one another. Even a vendor has some amount of knowledge over that language and is able to convey his message promptly. Besides, even during our freedom struggle English played a prominent role in uniting our leaders from various parts of the country to exchange their thoughts, ideas and plans about their future plots. Even now it connects the people of the country and it plays an integrative role.

OBJECTIVES

Objectives are the milestones to reach the destination i.e. to attain the aim or ultimate goal of education. Objectives are specific, direct and practical in nature; objectives are related to the learning outcomes or change in the behaviour of the students. The objectives are meant for both the teacher and the students. Even at the planning stage i.e. before entering the classroom the teacher asks himself, "what changes in behaviour of the students can I bring about through this lesson?" such changes constitute his (teacher's) educational objectives. Objectives are short term goals.

1. Cultural Objectives

English helps to bring diverse culture to come closer. It helps inter-cultural understanding inside and outside our country. In fact English helps to build new cultural tradition and modernization of Indian society. Study of culture dispelled ignorance and superstition from the minds of the people. English is a great important vehicle of our thought and activity in the prevailing modern scientific culture. It is said that language itself is an embodiment of culture. Our

Educationists like Dr.S.Radhakrishnan, Rabindranath Tagore, Swami Vivekananda, and Mahatma Gandhi spread our Indian culture through the world in English.

Rabindranath Tagore- He spread India's spirituality

Mahatma Gandhi- He spread the principles of truth and non-violence

Swami Vivekananda-He spread our Hindu religion

2. Literary Objectives

There is a general view that language should have its own literature. English language has a vast treasure of literature. In English, the pupils are able to appreciate poems, plays, novels, stories, essays, biographies, dramas, literary criticism and so we see that maximum knowledge can be imparted for the students' achievement. Prof. Gokak says, "It was in English classroom that the Indian Literary renaissance was born". Besides the various writers and master-minds like Shakespeare, John Milton, Bernard Shaw, Ruskin, Tolstoy etc. have contributed a lot for this literature.

Hence literary aim is an important one in the teaching-learning process of English as a foreign language.

3. Utilitarian Objectives

English is the language of great utility. It is used throughout the world. In India, about 200 thousand people's mother tongue is English. They are known as Anglo-Indians. In Sikkim, English is an official language. Mr.M.C. Chayla, the chief justice of Bombay High Court considered English as one of the Indian language. The Sahitya Academy of India recognises English as one of the Indian language. Even our former prime minister, Pandit Jawaharlal Nehru

wanted to include English in the 8th schedule of the constitution. So we see that English has become a versatile in use. It has obtained worldwide popularity and has many hands for one to hold and progress towards fortunes. Thus the Utilitarian aim of English teaching has its own importance.

4. Integrative Objectives

India is a multilingual country and so English plays a vital role in unifying our people of different sects. Though Hindi is our national language yet it has various opposition especially in some states like Tamilnadu, where Hindi is not accepted as a link language. So English language only brings greater number of people in close contacts with one another. Even a vendor has some amount of knowledge over that language and is able to convey his message promptly. Besides, even during our freedom struggle English played a prominent role in uniting our leaders from various parts of the country to exchange their thoughts, ideas and plans about their future plots. Even now it connects the people of the country and it plays an integrative role.

1.6.1 Difference between Aims and Objectives

Sl. No.	Aims	Objectives
1.	Aims are long term goals	Objectives are short term goals.
2.	Aims are broad and common	Objectives are narrow and specific
3	Philosophy, sociology is main source of aim	Psychology is the main source of objectives

Sl. No.	Aims	Objectives
4.	They are difficult to achieve	They can be achieved conveniently
5.	These can't be evaluated	These can be evaluated
6.	School, Society and Nation is responsible to achieve them	Generally teacher is only responsible
7.	Aims are non observable behaviours	Objectives are observable behaviours.
8.	To achieve aims we have to go beyond curriculum	Objectives are achievable within the curriculum.

1.6.2 Four important aims of teaching english in schools

Importance of Aims : By aims we mean the desired result of one's efforts, intention or purpose. Aims are the direct outcome of long-term purposes for which language is taught. Without aims we are like the traveller who does not know his destination or even the direction in which he is going. The aims determine our methods of teaching and even the preparation of textbooks. Aims are very important in the teaching-learning process. Regarding aims of teaching English, Thompson and Wyatt say, "It is necessary that the Indian people should not only understand English when it is spoken or written, but also that they should be able to speak and write it."

Aims and Objectives of Teaching English

The following are the four general aims of teaching English:-

- To enable the students to understand English when spoken.
- To enable them to speak English.
- To enable them to read English.
- To enable them to write English.

These aims correspond to the four language skills or abilities, namely:- listening, speaking, reading and writing. Listening and reading are passive or receptive skills, whereas speaking and writing are active and productive skills.

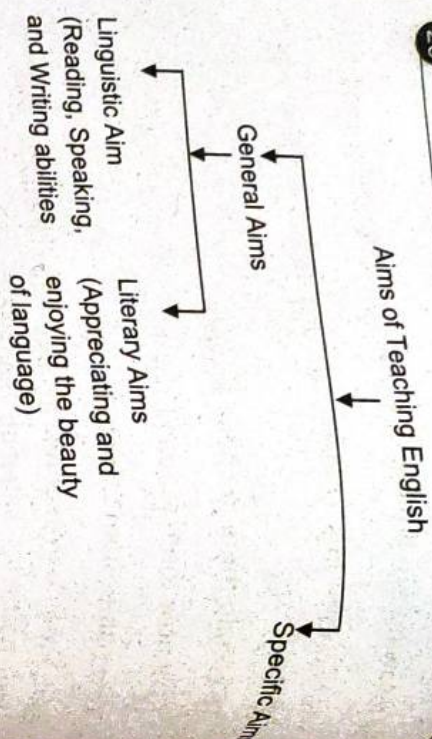

LANGUAGE SKILLS / ABILITIES

ACTIVE (OR) PRODUCTIVE SKILLS PASSIVE (OR) RECEPTIVE SKILLS

SPEAKING & WRITING LISTENING & READING

The aims may also be classified as those of 'reception' and 'expression'. Reception means understanding spoken and written English. Expression means speaking and writing English. Each of the language skills has its own importance. No skill can be ignored. The teacher should remember that for the teaching of each skill, a separate technique is required. As Dr. R.L. Ahuja says, "Efficiency is one skill does not lend itself to another. One, who writes a beautiful hand, cannot necessarily make a good speaker. One who can read well, that is, one who can interpret symbol well, cannot as such, write those symbols prettily. Or, again, one who can understand spoken English well cannot necessarily interpret the sound symbols in print."

We can divide the aims of teaching English into two types for our convenience.

General aims and specific aims. The general aims of teaching English are of two types namely linguistic aim, where the teacher's task is to train the students in reading, speaking and writing abilities whereas in literary aim, the teacher of English has to train the students in appreciating and enjoying the beauty of the language.

Hence during the earlier stages of schooling, the teacher should aim at developing language. The students should be able to understand spoken English, speak, read and write simple English. This is similar to the four aspects of language:-

- Semantics-related to understanding
- Phonetics-dealing with sound, spelling, pronunciation
- Graphics-related to writing
- Phonetic-cum-graphic-dealing with reading

TO UNDERSTAND SPOKEN ENGLISH

The student should be able to understand ordinary conversation, exchange of greetings, instructions, lectures, talks etc. He should be able to carry on his correspondence in English with his friends, relatives and others. This can be achieved by the student listening to the English channels on radio and television.

audio-tapes etc. so that students should respond to the English sounds.

TO SPEAK ENGLISH CORRECTLY

The student should be able to converse fluently in English. They should develop the ability to pronounce with rigid intonation and stress. As speaking ability of the student depends mainly upon his listening ability, ample opportunity should be given for listening practice. The student be taught to respond and to speak at normal speed.

TO UNDERSTAND WRITTEN ENGLISH

The student should be able to read and understand not only his textbooks, but all writings of a similar standard. He should have the ability to read simple prose, poetry, articles with comprehension. It should begin with loud reading followed by silent reading. An adequate vocabulary to understand the major new items and stories should also be considered when the task is being carried out.

TO WRITE ENGLISH CORRECTLY

Writing is one of the most important ways of self-expression. The student should be able to write applications to officials and business letters to commercial firms and departments. He should be able to describe in simple correct English his personal experiences, observations and needs. Legible writing, correct spellings and use of appropriate words and phrases are the three essentials of writing. A learner of English should be able to write composition on simple topics of day-to-day life including letters, application etc.

Thus the main aim of teaching English should be linguistic and practical. According to Palmer, "To aim at

literature is to miss the way to language. To aim at language is to pave the way to literature."

1.6.3 Place and aim of teaching English at different levels of school education (upper primary, secondary and higher secondary levels)

1. Place of English at the upper primary level

The minds of the school children at this level are receptive to new ideas and new suggestions. So, it is right that they should be taught English through the four language skills. The curriculum has been meticulously designed in such a way that they learn English without strenuous efforts as they are given ample opportunities to learn English through the language skills such as Listening, Speaking, Reading and Writing.

When they listen to teacher's simple talk they observe it keenly and they become interested in repeating them without their knowledge. This becomes a habit and they learn to speak simple sentences. Moreover, the rhymes and poems recited by the teacher are repeated by the children with the same rhythm and necessary body language.

They put simple questions and are able to answer the questions posed by the teacher. They read the poems and short stories aloud. Their pronunciation is corrected by the teacher at once.

They are taught how to write the English alphabets, later on words and sentences with reasonable accuracy. At the end of VII std the students are expected to have acquired the ability to use 150-200 basic structures and 1250 vocabulary items.

Aims of Teaching English At Upper Primary Level

- a. To learn alphabets.
- b. To develop the ability to read.
- c. To possess sufficient vocabulary.
- d. To understand spoken English.
- e. To answer simple conversational questions.
- f. To identify the things by their name.
- g. To write neatly and also practise cursive handwriting.

2. Place of English at the Secondary Level

Several changes have occurred in the educational field to cater to the educational need of the younger generation. This competitive world, technically called global village has witnessed constructive changes especially in educational field. Today learning English has become sine Quonon for better placement after the completion of formal education. Keeping this in view, new methods, approaches and techniques have been introduced to meet the challenges.

Students at the secondary level are offered better opportunities to acquire knowledge in English language through new syllabus and curriculum designed by expert educationists. Their text books contain vocabularial exercises which could make them enrich their lexical knowledge.

The study skills introduced in their texts will certainly augur well for the student's English language acquisition. At the end of each lesson occupational competency is given. This could help the students acquire fluency. Further, the strategic competency exercises make them learn the nuances of syntactical items. The creative competency

exercises may lead them towards learning the English language through creative learning techniques.

By learning these effective competencies the students are able to listen to English talks. They can converse in English using simple sentences. They are good at references skills. They can read the stories and can give comments on them in English. They are able to write simple letters and write simple dialogues on their own.

Aims of Teaching English at Secondary Level

- a. To enable the students to speak fluently.
- b. To enhance them to read the passage without any mistakes.
- c. To spell words and try to pronounce it properly.
- d. To enable them to present their ideas in speech and writing.
- e. To develop them to use the reference materials like the Dictionaries, Thesaurus etc. whenever needed.
- f. To enable them to read newspapers, magazines etc. and understand it.
- g. To enhance them to write letters like the application letters and leave letters.

3. Place of English at the Higher Secondary Level

At the end of school level, the student acquires the knowledge of a) elements of knowledge b) forms of writing and c) textual context.

As a result of previous knowledge in English mastered through various learning items over the years. The student at

the higher secondary level is expected to recognize, compare, discriminate and analyze the grammatical structures including parts of speech, tenses, phrases etc. He located errors in sentence patterns and identifies antonyms and synonyms. He is good at spelling and is accurate in using punctuation. These are placed under elements of language.

As regards forms of writing the student at the higher secondary level must be able to write letters, both formal and informal. He can write essays on his own using simple phrases and idioms. The student is able to condense the given paragraph in to one third of its actual length.

As far as textual contents are concerned the student learns different authors, events to be known, ideas to be observed, characters to be recorded in mind and emotions and feelings to be understood in proper perspective.

His comprehension skill becomes sharp as he recognizes sounds of English words and their sound units. He is able to speak correct and simple English. His reading skill may have considerable developed as he finds it easy to interpret ideas and draws inferences. He is able to organise certain ideas to prepare his own essay.

He is able to write simple and correct English. He can use new words to frame simple sentences along with phrases and idioms. He uses several sentence patterns. He translates a paragraph in Tamil into English without grammatical mistakes.

He develops a passion for English. He reads news papers, English magazines, Watches English commentaries on TV and tries to participate in English talk shows and debates.

As he is aware of the need of communication skill in English, he takes efforts to improve his English knowledge through various means.

Aims of Teaching English at Higher Secondary Level

- a. To speak English fluently and accurately.
- b. To develop the ability to understand the native speakers and be able to respond them.
- c. To make narratives and to take notes.
- d. To read English novels and understand it.
- e. To express one's ideas coherently in the gatherings.
- f. To acquire vocabulary of about 3000 words.
- g. To use reference materials like Dictionaries, Thesaurus, and Encyclopaedia etc.
- h. To enjoy and appreciate the beauty of the poem.
- i. To punctuate properly and use functional grammar.
- j. To enable to apply for a job by looking at the advertisement in the newspaper.
- k. To summarize and comprehend the English passages.
- l. To enable to write with reasonable speed.
- m. To write all types of letters.
- n. To have knowledge on stress and intonation.

1.7 Instructional Objectives and Behavioural Objectives

Instructional Objectives

Instructional objectives are basically statement which clearly describe an anticipated learning outcome.

Instructional objectives are helpful to the teacher as well as the learner throughout the learning process and are invaluable in the evaluation process. An instructional objective is the focal point of a lesson plan. Before start teaching teacher must be guided by instructional objectives. Instructional objectives can be classified into three domains of learning i.e. cognitive, affective and psychomotor. Objectives should state what the learners should be able to do after the instruction is complete. The process of how the instruction happens is not considered as an objective.

Purpose of Writing Instructional Objectives

- Define the desired outcome of instruction in terms of tasks that student will be able to perform.
- Establish expectation for the student.
- Focus course development and teaching activities on relevant information and skills.
- Provide a clear reason for teaching
- Provide criteria for eliminating unnecessary information and activities
- Indicate how success can be measured

Characteristics of Instructional objectives

Instructional objectives are specific, measurable, short term, observable student behavior. They indicate the desirable knowledge, skills of attitudes to be gained at the

end of teaching. It describe the performance of a learner should be able to demonstrate after instruction.

- A well-written objective should describe a learning outcome. It should not describe a learning activity
- An objective focuses on the learner, not on the teacher. It describes what the learner will be expected to be able to do. It should not describe a teacher activity.
- If an instructional objective is not observable, it leads to unclear expectations and it will be difficult to determine. The key to writing observable objectives is to use verbs that are observable and lead to a well defined product. Verbs such as "to know" to understand, "to enjoy" to appreciate etc. are vague and not observable. Verbs such as "to identify", "to list", "to compute" are explicit and describe observable actions or actions that lead to observable products.
- There are many skills that cannot be directly observed. The thinking process of a student to solve a mathematics problem cannot be easily observed. However one can look at the answers or the steps to arrive at an answer.
- Objective to be sequentially appropriate
- Objective to be attainable within reasonable amount of time.
- Objective to be developmentally appropriate (within students level of intellectual)

Importance of Instructional Objectives

Instructional objectives are important to both learners and instructors. They help learners plan their study and prepare for examinations. They guide the instructors in

planning instruction and devising tests. Instructional objectives play an important role in the teaching and learning process. They are the heart of teaching.

Few importance points of Instructional Objectives are given below :

1. To provide direction for the instructional process by clearly stating the intended learning outcomes.
2. To convey instructional intent to students, parents and educational authorities.
3. To provide a basis for evaluating student's learning by describing the performance to be measured.
4. They state in clear terms behavioural changes expected from a learner after with a learning activity.
5. Without instructional objectives, it will be very difficult for a teacher to access the behaviours of the students in the three domains of education. (Cognitive, affective and Psychomotor Domains)
6. Instructional objectives encourage reflection and good course design and development.
7. Instructional objectives help to define reinforcement situations of the learners.
8. They enable the teacher to modify methods to suit the process of eliciting those behaviours that the objectives specify.
9. They help the teacher to know how well the students have covered the content.
10. They give direction to both teacher and students in the selection and use of materials, methods and activities for learning.

Behavioral objectives

A behavioral objective is a learning outcome stated in measurable terms, which gives direction to the learner's experience and becomes the basis for student evaluation.

Points in writing behavioral objectives

1. Begin each behavioural objectives with a verb. The critical aspect of any behavior is the verb selected from learning activities.
2. State each objective in terms of learner performance. A behavioral objective is one that is considered to be observable and measurable. Behaviour is generally constructed to be an action of an individual that can be seen, felt or heard by another person.
3. State each objective so that it includes only one general learning outcome.

Examples of Behavioral Objectives

Knowledge : Remembering previously learned facts

Comprehension : Ability to understand or grasp the meaning of material.

Application : Ability to use previously learned material in new and concrete situations.

Motivation and Behavioural Learning

Motivation plays an important role in behavioural learning. Positive reinforcement can be motivators for students. For example, a student who receive praise for a good test score is much more likely to learn the answers effectively than a student who receives no praise for a good test score. The student who receives no praise is

experiencing negative reinforcement - their brains tell them that though they got a good grade, it did not really matter, so the material of the test becomes unimportant to them. Conversely students who receive positive reinforcement see a direct correlation based on that response to a positive stimulus.

Purpose of Behavioural objectives

- Guide for the teacher to design of instruction.
- Guide for the teacher for evaluation
- Guide for the learner relative to learning focus
- Guide for the learner relative to self assessment
- Makes teaching more directed and organized
- Forces teacher to think carefully about what is important.
- Helps teacher to avoid unnecessary repetitions in teaching.
- Provides visibility and accountability of decisions made by teachers and learners
- Helps students make decisions regarding prioritizing
- Helps relationship between teacher and learner.

Examples of Behavioural objectives

General Objectives : The learner will be able to Solve Quadratic Equation

Specific Objectives : The learner will be able to solve Quadratic Equation using formulae method.

1.7.1 Writing Instructional Objectives in terms of Behavioural Objectives

A behavioral objective is a way by describing the objectives of a content in terms of what the learner should be able to do at the end of the lesson. A behavioural objective must be stated clearly and precisely so that everyone who reads it will know exactly the desired outcome of the content.

In writing a behavioural objective, it is important to include the verb that depicts what the learner is expected to do, i.e. it should be measurable.

Examples

- 1) The students will be able to describe the process of transpiration in plants

Here the students are going to describe at the end of instruction. Here the emphasis is on learners and the learning outcome. Here learning is a change of behavior.

- 2) To identify proper fractions

Here the learner and his performance are given.

- 3) The students will understand the three laws of reflection

Here the verb understand does not indicate behavior that can be observed directly. It does not indicate any specific behavior. If the objective is written as.

The students will tell the three laws of reflection.

Then it is observable behavior. Hence the verb 'understand' can further be explained and classified by listing under that some specific behavior like tell, identify, describe, give, differentiate etc. In other words the verb understand is more general and the verb tell is more specific as compared to other.

Let us discuss the two objective in details

- i. The pupil will know the working of a steam engine.
- ii. The pupil will be able to describe in about ten to fifteen sentences the working of a steam engine.

In the above example i) one cannot see other's mind to determine what he knows. We are not able to observe some aspect of this behavior that corresponds his knowledge. Hence an objective should indicate the kind of performance which will be accept as evidence.

Thus in the second example, well-stated instructional objectives are given in observable behavioral terms.

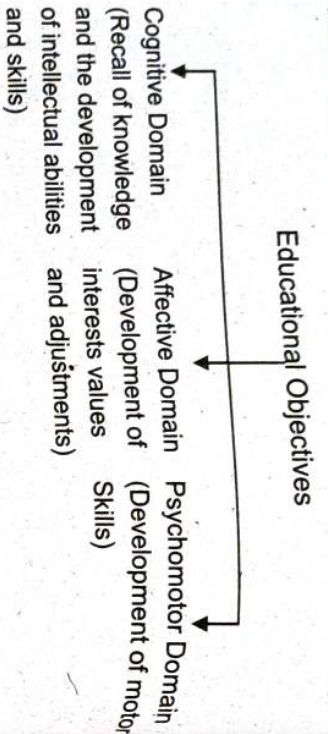

Few examples of well-stated Instructional Objectives

1. The students will be able to describe the three causes of World War II as discussed in the class.
2. The class will be able to identify correctly, all the parts of the hibiscus flower.
3. Students will tell the name of any four corporations in Tamil Nadu.
4. Students will be able to identify the part of a simple sentence.
5. Students draw a right angled triangle with given two sides.

1.8 Blooms Taxonomy of Instructional Objectives

To define understand and classify the educational objectives American educationalist Benjamin S. Bloom and his associates at the University of Chicago divide it into three domains i.e. cognitive, affective and psycho-motor and explains clearly to the teachers.

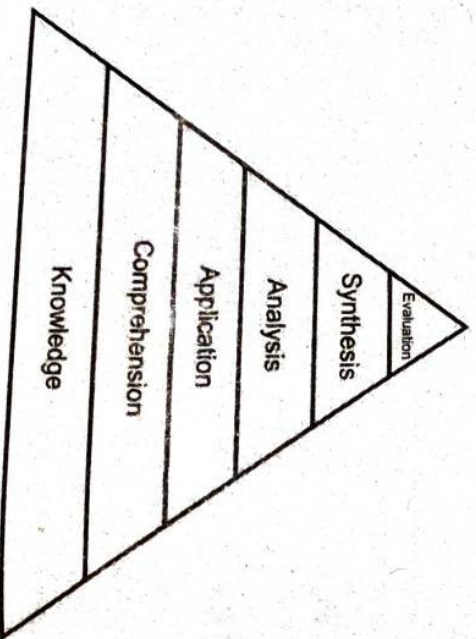

A brief account about these is given below.

- In each domain, objectives are hierarchical order starting from easy to difficult. Hence this arrangement is called "Taxonomy of Educational objectives."

1.8.1 Cognitive Domain

Cognitive domain includes those objectives which deal the recall or recognition of knowledge and the development of intellectual abilities and skills. This domain consist of six parts and arranged in a hierarchical order, in increasing levels of difficulty (from lower to upper)

Knowledge forms the basis for all cognitive objectives and all other objectives are not possible without knowledge. Similarly if one is able to apply knowledge in a new situation, it can be inferred that he has to achieve lower levels of objectives namely knowledge and comprehension clearly. Thus a higher level objectives subsumes to lower ones.

While teaching mathematics for Secondary and Higher Secondary students give priority to the first three objectives of cognitive domain namely knowledge, comprehension and application. The remaining three objectives Analysis, Synthesis and Evaluation may be trained to them according to their maturity of mind.

Knowledge :

This objective is to remember and recall or recognize the already learnt information and acquire more and more knowledge.

Comprehension :

Objective at this level requires learners to understand the knowledge without any doubt. He should have ability to arrange data in order.

Application :

This objectives requires students to apply already learnt knowledge to a new and unfamiliar situations. Think critically in depth.

Analysis :

Objective at this level requires the learners, to attain the ability to break up a given communication into parts to understand it better.

Synthesis :

Synthesis is just opposite to Analysis. The ability to draw upon elements from various sources and put them together to produce a new structure. This objective gives divergent thinking and creativity.

Evaluation :

This is a highest objective of cognitive domain. The ability to make judgements about something for given purpose. Judgement can be both quantitative or qualitative.

It helps teachers in the following ways:

- Helps to assess and judge the difficulty of assignments.
- It increase the accuracy of the lesson
- Simplifies action to ease personal learning
- Designed a combined assessment
- Helps for project based plans for learning
- Helps for group discussion

Instructional objectives of Cognitive Domain

Parts of Cognitive Domain	Instructional Objectives
Knowledge	Student
Student knows the facts concepts, processes, procedures, principles of English Language	1. List the facts. 2. Recall what he learned 3. Reproduce the concepts and procedures 4. State the principles

Parts of Cognitive Domain	Instructional Objectives
Comprehension	Student
Comprehending the meaning, translation, interpolation and interpretation of instructions	1. Gives examples 2. Explain in one's own words 3. Comprehends 4. Converts 5. Differentiates 6. Defends 7. Extends 8. Translate 9. Detect errors and rectify 10. Summarizes
Application	Student
Applies what was learned in the classroom into new situations use a concept in a new situation	1. Applies 2. Demonstrates 3. Modifies 4. Prepares 5. Produces 6. Relates 7. Shows 8. Solves 9. Classifies 10. Differentiate
Analysis	Student
Separates material or concepts into component parts so that its organisational structure may be understood. Distinguishes between facts and inferences.	1. Reorganize logical fallacies in reasoning 2. Gathers information 3. Analysis 4. Breaks down 5. Discriminates 6. Identifies

Parts of Cognitive Domain	Instructional Objectives
	- Illustrates - Outlines - Selects - Separates
Synthesis Put parts together to form a whole, with emphasis on creating a new meaning or structure	Student - Design a method to perform a new task. - Revises the process to improve the outcome - Compile, generate, create concepts - Solves the problem - Develop the idea in advance.
Evaluation Make judgements about the value of ideas or materials	Student - Select the most effective solution. - Explain and justify a new proposal - Review / Criticize - Describes - Discriminates - Justifies - Supports - Evaluates - Predicts - Ranks

1.8.2 Affective Domain

The affective domain refers to emotional and attitudinal engagement with the subject matter while the cognitive domain refers to knowledge and intellectual skills related to the subject matter.

Aims and Objectives of Teaching English

Affective domain includes the development of feelings of the educational and social attitudes and to increase the emotional objectives namely attitude, interest, values and appreciation. The different objectives under affective domain are Receiving, Responding, Valuing, organisation and characterisation.

1. Receiving:

This is the first step for the learner to learn what the teacher teaches. Listen attentively to a particular phenomena or stimuli.

2. Responding:

This is also called interest objective. Pupil is sufficiently motivated to attend actively. Interest in mathematics lends the student to select a particular vocation throughout his life. Interest can be developed in solving puzzles, reading mathematical books and journals etc.

3. Appreciation :

Student appreciates Mathematics for its use in daily life and how it helps to other subjects.

4. Organisation :

This objective brings together different values, resolving conflicts among them, starting to build an internally consistent value system.

5. Valuing:

It means individual's own valuing or assessment of thing, phenomena or behaviour. It is also called attitude. Development of proper attitude in mathematics is one of the major objectives of teaching mathematics.

Instructional Objectives of Affective Domain

Parts of Affective Domain	Instructional Objectives
Receiving	Student 1. Identifies 2. Asks 3. Understand 4. Points out errors boldly. 5. Listen to others attentively.
Responding	Student 1. Reads books of English 2. Gives a presentation 3. Write articles for school magazine. 4. Gives short cuts for solving problems. 5. Does problems apart from syllabus. 6. Gains English knowledge 7. Participates in English club activities. 8. Participate in class discussions.
Appreciation	Student 1. Shows the ability to solve problems. 2. Proposes a plan to social improvement and follows with commitment. 3. Appreciates, how English language is useful in daily life.

Parts of Affective Domain	Instructional Objectives
Organisation	Student 1. Reorganize the need for balance between freedom and responsible behavior. 2. Explains the role of systematic planning in solving problems.
Valuing	Student 1. Shows self reliance when works independently. 2. Co-operates in group activities. 3. Revises judgements and changes behaviour in light of new evidence. 4. Values people for what they are not how they look.

1.8.3 Psychomotor Domain

Elizabath Simpson built her taxonomy on the work of Bloom and others. Simpson's Psychomotor domain is comprised of utilizing motor skills and coordinating them. Simpson's taxonomy has a focus toward the progression of mastery of a skill from observation to invention.

The psychomotor domain includes Physical movement, coordination and use of the motor-skill areas. Development of these skills requires practice and is measured in terms of speed, precision, procedures or techniques in execution.

The seven major categories are perception, set, Guided Responses, mechanism, complex over to Response, Adaptation and Origination.

The behaviour and development of every child is depends on the above three domains. So while teaching, the teachers teach the subject matter on the basis of the above three domains.

1. Perception

It means observing the act of the teacher.

2. Set

Readiness to act. It includes mental, physical and emotional sets

3. Guided Response

Following directions of the teacher and differentiating among various movements. This is the early stage in learning complex skill.

4. Mechanism

This is the intermediate step in learning a complex skill. Learned responses have become habitual and the movements can be performed with some confidence and proficiency

5. Complex Overt Response

This is the highest level of proficiency and it becomes natural and automatic. Proficiency is indicated by a quick, accurate and highly coordinated performance, requiring a minimum energy.

6. Adaptation

Skills are well developed and the individual can modify movement patterns to fit special requirements

7. Origination

Creating new movement patterns to fit a particular situation or specific problem. Learning outcomes emphasize creativity based upon highly developed skills.

Instructional Objectives of Psychomotor Domain

Parts of Psychomotor Domain	Instructional Objectives
Perception Perception is the most basic level to process sensory information that guide motor activity	Student 1. Detects non verbal communication cues 2. Estimate where a ball will land after it is thrown and then moving to the correct location to catch the ball. 3. Observing the act of the teacher.
Set Mentally, emotionally and physically ready to act.	Student 1. Repeating the act of the teacher. 2. Acts upon a sequence of steps to solve a problem. 3. Shows desire to learn a new process.
Guided Response Imitates and practices skills often in discrete steps	Student 1. Follows 2. React 3. Responds 4. Copies 5. Performs
Mechanism Performs acts with increasing efficiency, co-ordinate and proficiency.	Student 1. Drive a cycle 2. Assembles 3. Dismantles 4. Measures 5. Mixes
Complex Overt Response Motor activity performs	Student 1. Operates a computer quickly and accurately

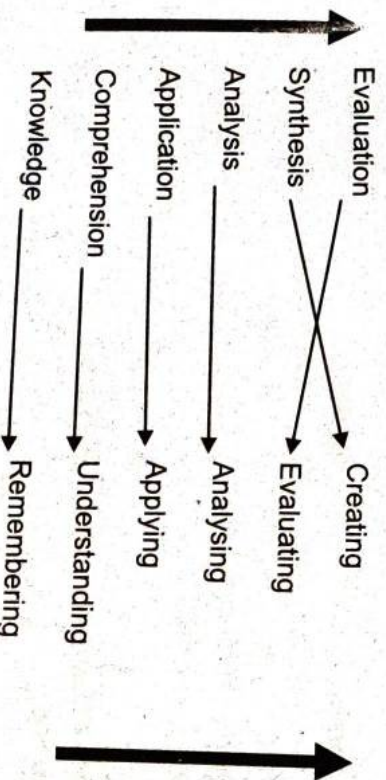

Parts of Psychomotor Domain	Instructional Objectives
automatically.	2. Assembles 3. Builds 4. Measures 5. Organizes
Adaptation Adapts skill sets to meet a problem situation.	Student 1. Responds effectively to unexpected situations. 2. Modifies method to meet the needs. 3. Perform a task with a new method.
Origination Create new patterns for specific situations.	Student 1. Constructs a new theory 2. Designs 3. Creates 4. Builds 5. Composes

1.9 Revised Bloom's Taxonomy

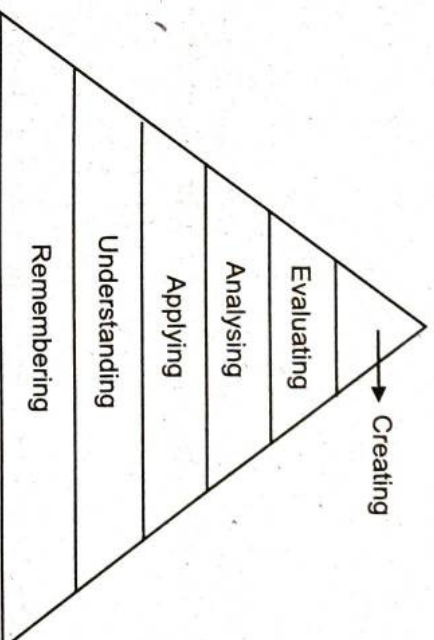

In 1990 Loris Anderson former student of Bloom revised the taxonomy and made a number of changes.

Bloom's Taxonomy

Revised Bloom's Taxonomy

Revised Bloom's Taxonomy

Remembering:

The knowledge category was renamed as remembering. Knowledge is an outcome or product of thinking and not a form of thinking. Hence the word knowledge was inappropriate to describe a category of thinking and was replaced with the word remembering.

Remembering is recalling information. This objective is to recognizing, listing, describing, naming, finding already learnt information.

Understanding:

Objective at this level requires learners to understand the knowledge without any doubt. He should have knowledge to interpret, explain, classify and summarize.

Applying:

Objective at this level requires the learners to apply information in another familiar situation and executing in a best way.

Analysing:

Objective at this level requires the learners to attain the ability to break up a given information into parts to explore understanding and relationships between them.

Evaluating:

The ability to make judgements about a decision or course of action. Judgement can be both quantitative or qualitative.

Creating:

By putting elements together from various sources to form the ability to generate new ideas, products or ways of viewing thing in a different way. Designing, planning, producing, inventing new things and objects is the objective at this level.

Potential activities of cognitive domain**Remembering:**

1. Make a list of the main events of today.
2. Write ten lines of memory poem

Understanding:

1. Retell the story in your own words.
2. Prepare a flow chart to illustrate the sequence of events.

Applying:

1. To develop the ability to write official letters.
2. Participation in conversations.

Analyzing:

1. Design a questionnaire to gather information.
2. Construct a story with given information.

Evaluating:

1. Conduct a debate about an issue of
2. Prepare a case to present your view about

Creating:

1. Write a poetry as a creative task.
2. Write about an article for sports ay function.

1.10 Interrelation among the domains

In 1956, Benjamin. S.Bloom classified domains of human learning into three parts -cognitive (knowing or head), affective (feeling or heart) and psychomotor (doing or kinesthetic, tactile or hand/body) as the educational objectives. However, over a period of time new ideas and insight emerged about teaching-learning processes. In 21st Century learners, Lorin. W.Anderson, and David R. Krathwohl, revised the Bloom's taxonomy and it was published in 2001.

These domains have a deeper understanding of the relationship between cognitive, social, Emotional, physical and language development. Let us see the interrelationship among the domains:

Cognitive Development

Cognitive development refers to the way a child grows intellectually. Assessing for academic skills, reasoning, and critical thinking abilities, and the acquisition of knowledge or learning. Difficulties interacting with others as a result of

problems and social or emotional development will impede a child's ability to focus. Problems or delays in physical development might impact a child cognitively. The child who struggles with language development could have difficulties in communicating or understanding instructions.

Affective Domain

The affective domain includes the feelings, emotions and attitudes of the individuals. The categories of affective domain include receiving phenomena; responding to phenomena; valuing; organization and characterization. The sub domain of receiving phenomena creates the awareness of feelings and emotions as well as the ability to utilize selected attention. This can include listening attentively to lessons in class. The next sub domain of responding to phenomena involves active participation of the learner in class or during group discussion. The ability of the student to prioritize a value over another and create a unique value system is known as organization. This can be assessed with the need to value one's academic work as against their social relationships. This helps to control the behavior of the individual.

Psychomotor domain

This includes utilizing motor skills and the ability to coordinate them. The sub domains are perception; set, guided response; mechanism; complex overt response; adaptation; and origination. Perception involves the ability to apply sensory information to motor activity. for eg. Practicing a series of exercises for scoring high marks. Set, involves the readiness to act upon a series of challenges to overcome them. It includes the ability to imitate a displayed behavior or utilize a trial and error method to resolve a situation. Mechanism involves the ability to convert learned

responses into habitual actions with proficiency and confidence. A student having an increased typing speed when using a computer is an example for complex overt response. Adaptability is an integral part of the domain which exhibits the ability to modify learned skills to meet special events – making a working model. Origination also involves creating new movement patterns for a specific situation.

The learning domains can be incorporated, while designing the course outcomes of all the courses in a program. We can learn mental skills, develop our attitudes and acquire new physical skills as we perform the activities of our daily living.

Research in the field establishes the significant relation among three domain of learning.

A lesson developed by a teacher requires the inclusion of all three domains in constructing learning tasks for students. The diversity in such learning tasks helps creates a comparatively well-rounded learning experience that meets a number of learning styles and learning modalities. It is important for teachers to adopt a teaching strategy that combines three domains of learning to enable teaching and learning to be considered as effective. Apply the best and suitable delivery techniques that would impact positively on the Cognitive, Affective and Psychomotor domains of the students. The interaction of all three domains is needed for meaningful educational experiences.

1.11 Correlation between Subjects

No subject is ever well understood and no art is intelligently practiced, if the light with the other studies are able to throw upon it is deliberately shut out. Education is a coordinated process and the major aim of education is the

'unification of knowledge' existing in the different branches of learning. Hence teaching of various subject is correlated. According to Herbert first 'All knowledge is one unit'. Correlation in teaching indicates a technique which shows the reciprocal relationship between various Subjects of the curriculum for making the knowledge concrete and permanent.

To study one subject with other or interpersonal relation of different subject is called correlation In the field of Education.

English and other subjects

- **English with History:** essay writing can be planned on historical themes to make them more meaningful, by associating with past events lie building of Taj Mahal, celebrate National days by having elocution and debate. Students can write plays, stories or poems on historical events.
- **English and Science:** Interest in Science can be inculcated by explaining miracles of science artistically. Lives of great Scientists can be written.
- **English and Maths:** Make a pie chart of time spent by you in a day and give it to your friend for interpretation. Read about the life of Mathematicians. Inventions of zero by Aryabhata. Students can make poem on numbers and so on.
- **English and Geography:** Geographical features have been source of inspiration to innumerable poets. For example Wordsworth's 'Daffodil'. Students would get an inspiration to write essay and poems on changing seasons and natural beauty.

Uses of correlation

1. Mind perceives knowledge as a whole. All the subjects aim to develop the intellectual power of the students as a whole. Therefore, it becomes necessary to correlate one subject with another. No subject can be taught in isolation.
2. Correlation of a subject with daily life helps to make the knowledge broad-based and makes knowledge useful. The aim of education "to achieve the development of an all-round personality", cannot be done by teaching only a few subjects in isolation.
3. It strengthens skills that students encounter in one content area but also practice in another, leading to mastery of those skills.
4. It develops the mental abilities like imagination power, logical thinking and analytical power of students.
5. It makes the lesson easy and clear and develops various human and social qualities such as co-operation, citizenship etc.
6. Correlation of subject with daily life is of the utmost importance in order to create interest in the subject.
7. It makes learning concrete and permanent.
8. It helps to lighten the burden of curriculum.
